About This Document

Follow the instructions in this manual carefully to ensure safe and long-lasting use of the projector.

Symbols used in this manual

Many pages in this document have a dedicated area for notes. The information in that area is accompanied by the following symbols:

WARNING: this symbol indicates that there is a danger of physical injury to yourself and/or damage to the equipment unless the instructions are closely followed.

ELECTRICAL WARNING: this symbol indicates that there is a danger of electrical shock unless the instructions are closely followed.

LASER WARNING: this symbol indicates that there is a potential hazard of eye exposure to laser radiation unless the instructions are closely followed.

NOTE: this symbol indicates that there is some important information that you should read.

Product revision

Because we at Digital Projection continually strive to improve our products, we may change specifications and designs, and add new features without prior notice.

Legal notice

Trademarks and trade names mentioned in this document remain the property of their respective owners. Digital Projection disclaims any proprietary interest in trademarks and trade names other than its own.

Notes

Laser Information

LASER RADIATION
AVOID DIRECT EYE EXPOSURE
CLASS 3R LASER PRODUCT
Emitted wavelength : 450-460 nm
Max. Pulse energy: 0.376 mJ, Pulse duration: 0.74 ms

激光辐射 避免眼睛受到直接照射 3R类激光产品
波长 : 450-460 nm
最大脉冲能量: 0.376 mJ, 脉冲时间: 0.74 ms

RAYONNEMENT LASER
EXPOSITION DIRECTE DANGEREUSE POUR LES YEUX
APPAREIL À LASER DE CLASSE 3R
longueur d'onde : 450-460nm
maximum énergie de impulsion : 0.376 mJ,
durée de impulsion : 0.74 ms

GB 7247.1-2012 / IEC/EN 60825-1:2007

Explanatory label: E-Vision Laser 8500

LASER RADIATION
AVOID DIRECT EYE EXPOSURE
CLASS 3R LASER PRODUCT
Emitted wavelength : 450-460 nm
Max. Pulse energy: 0.253 mJ, Pulse duration: 0.5 ms

激光辐射 避免眼睛受到直接照射 3R类激光产品
波长 : 450-460 nm
最大脉冲能量: 0.253 mJ, 脉冲时间: 0.5 ms

Notes

Caution - use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

Introduction

Congratulations on your purchase of this Digital Projection product.

Your projector has the following key features:

- Support for most 3D formats.
- HDBaseT® for transmission of uncompressed High Definition Video up to 100 m from the source.
- 3G-SDI with loop-through.
- Edge Blend.
- Blanking control for custom input window sizing.
- Cornerstone, Vertical & Horizontal Keystone, Pincushion & Barrel, and Image Rotation.
- Separate control of screen and source aspect ratio.
- Control via LAN and RS232.
- Motorised lens mount.

A serial number is located on the side of the projector. Record it here:

What's In The Box?

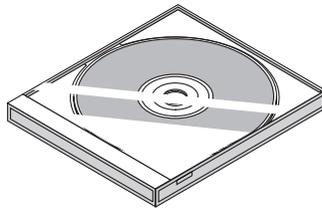

**Remote control
(117-780)**

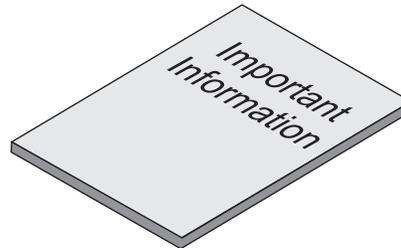

2x AAA batteries

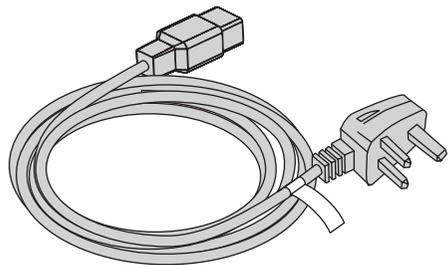

Projector

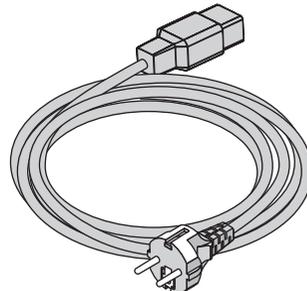

User Manual on disc

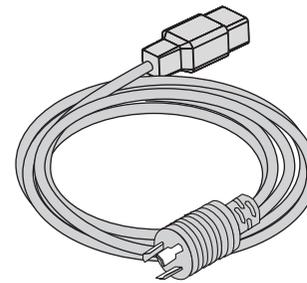

Important Information (117-440)

Power cable, United Kingdom

Power cable, Europe

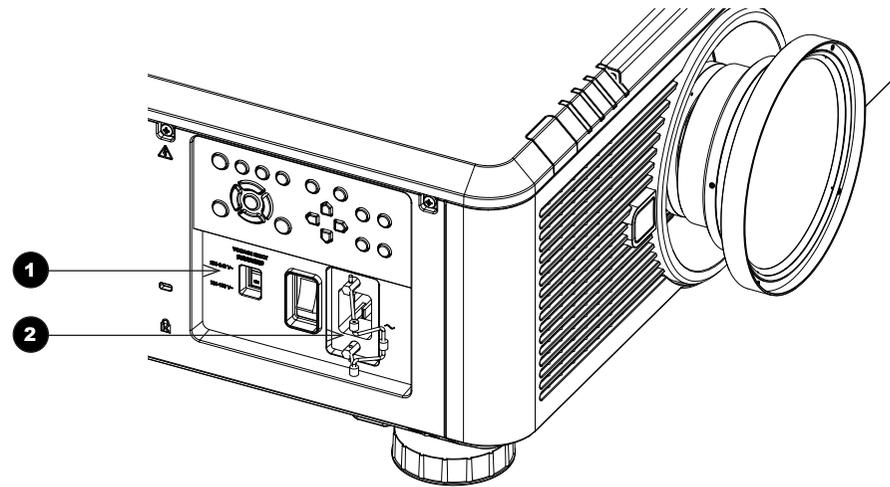

Power cable, North America

Notes

-  *Make sure your box contains everything listed. If any pieces are missing, contact your dealer.*
-  *You should save the original box and packing materials, in case you ever need to ship your projector.*
-  *The projector is shipped without a lens.*
-  *Only one power cable - dependent on the destination territory - will be supplied with the projector.*

Connecting The Power Supply

Adjust the **VOLTAGE SELECT switch 1** to the required voltage, then firmly push the mains connector into the **socket 2**.

Notes

-  Use only the power cable provided.
-  Ensure that the power outlet includes a ground connection as this equipment **MUST** be earthed.
-  Handle the power cable carefully and avoid sharp bends. Do not use a damaged power cable.

Voltage selection

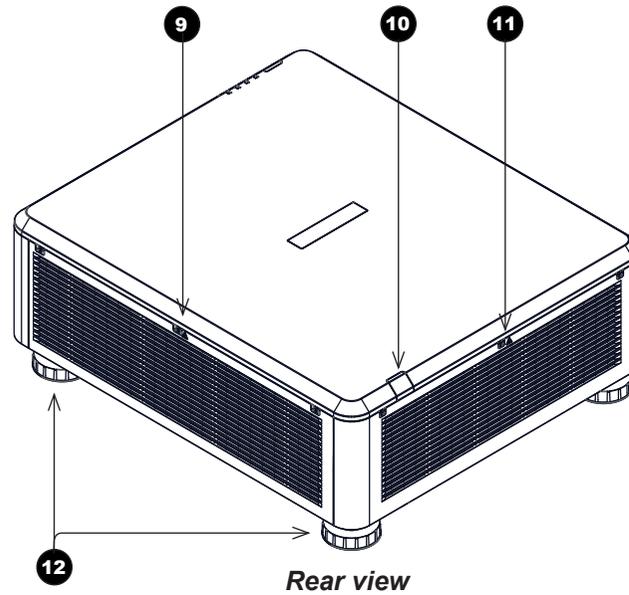

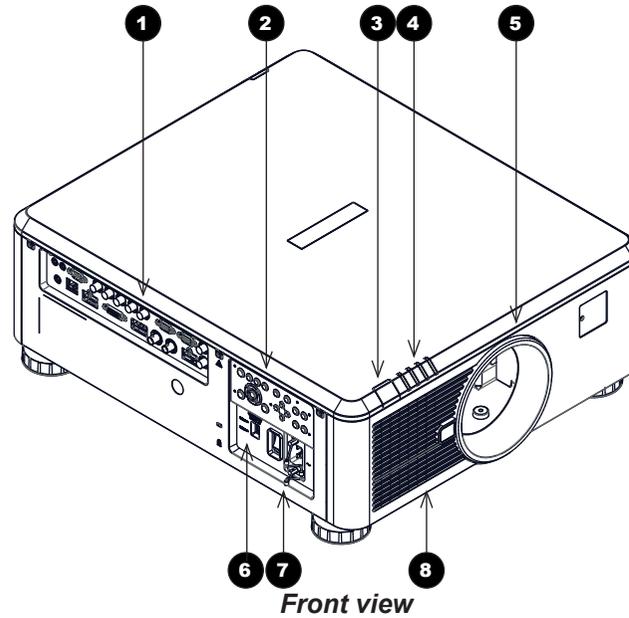

The VOLTAGE SELECT switch must be set to match the power supply you are using:

Voltage of power supply used	Position of VOLTAGE SELECT switch
AC100-139V outlet	200 240V~  100 130V~
AC200-240V (single phase) outlet	200 240V~  100 130V~

Projector Overview

Front and rear views

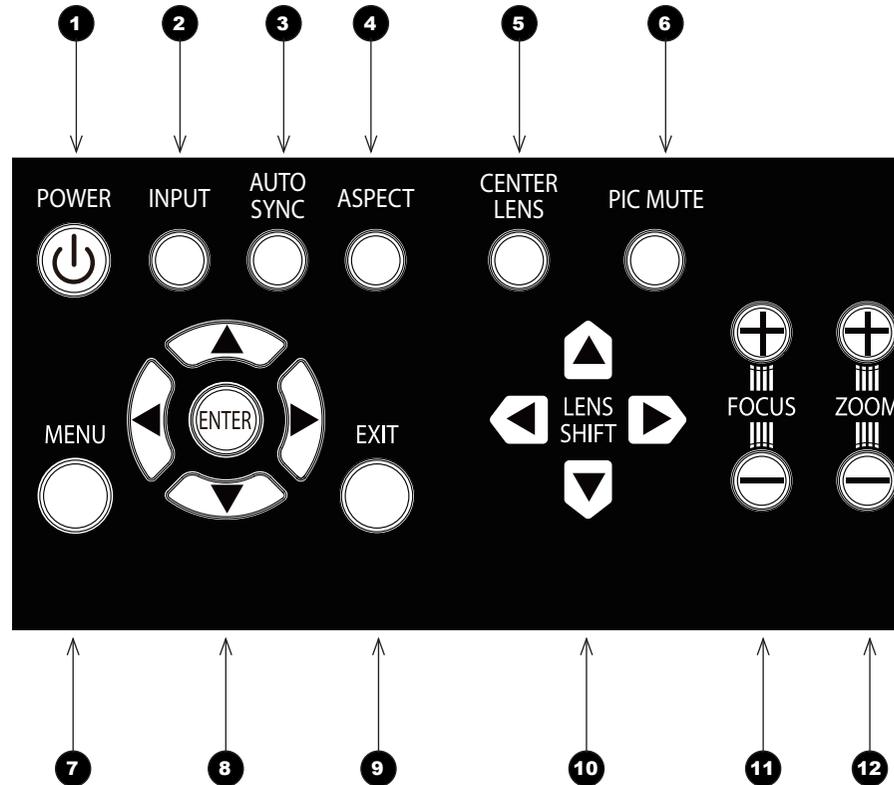

- 1 Connection panel
- 2 Control panel
- 3 Front infrared window
- 4 Indicators
- 5 Lens mount
- 6 Voltage selector
- 7 Power switch and power connection
- 8 Air inlet
- 9 Air inlets
- 10 Rear infrared window
- 11 Air outlets
- 12 Adjustable feet

Notes

Control panel

- 1 POWER**
Switches the projector on and off (STANDBY).
- 2 INPUT**
Switches to the next input source.
- 3 AUTO SYNC**
Re-synchronises with the current input signal.
- 4 ASPECT**
Changes the aspect ratio.
- 5 CENTER LENS**
Centers the lens.
- 6 PIC MUTE**
Shows and hides the projected image. When OFF, the light source is completely switched off and the screen is black.
- 7 MENU**
Displays and exits the OSD.
- 8 Arrow buttons & ENTER**
Navigation buttons used to highlight menu entries in the OSD. Press **ENTER** to open or execute the highlighted menu entry.
- 9 EXIT**
Exits the current OSD page and enters the level above.
- 10 LENS SHIFT arrow buttons**
Each of these buttons moves the lens in the specified direction.
- 11 FOCUS plus and minus buttons**
Used to move the focus in and out.
- 12 ZOOM plus and minus buttons**
Used to zoom in and out.

Notes

Projector indicators

TEMP. Off = no problem

Flashing red = temperature error

LIGHT Off = light is switched off

Flashing green = light is preparign to switch on

Flashing red (cycles of six flashes) = light module failure

On, red = light module has reached end of life

On, green = light is switched on

STATUS Off = no problem

Flashing red (continuously) = cover error

Flashing red (cycles of four flashes) = fan error

On, red = system error

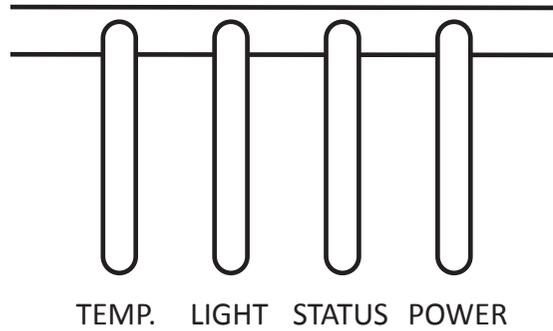

POWER Off = the projector is switched off

Flashing green = the projector is warming up

Flashing amber = the projector is cooling down

On, red = STANDBY mode

On, green = the projector is switched on

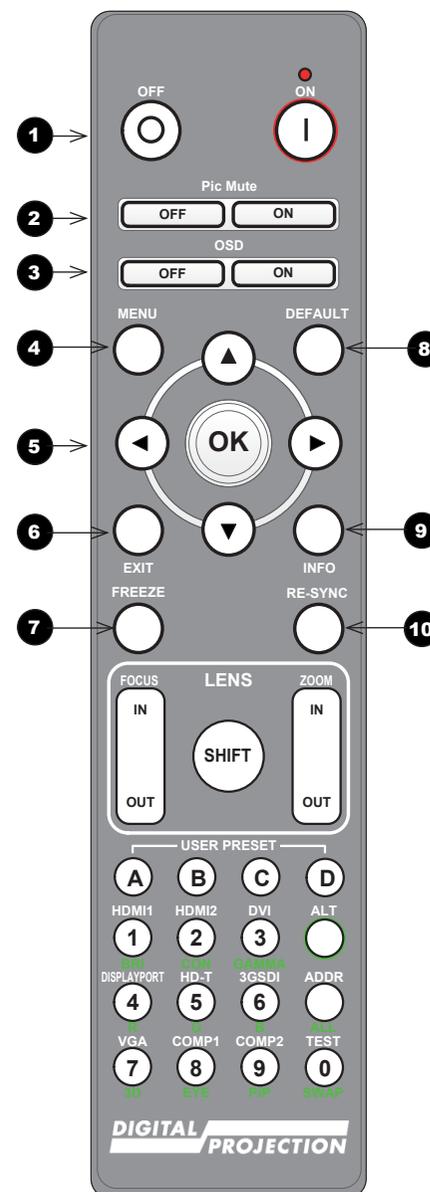

Notes

Remote Control

- 1 Power ON / OFF**
Turns power on and off.
- 2 Pic Mute ON / OFF**
Shows and hides the projected image.
When OFF, the light source is completely switched off and the screen is black.
- 2 OSD ON / OFF**
Enable and disable screen timeout messages and control whether to show the OSD during projection.
- 4 MENU**
Access the OSD. If the OSD is open, press this button to go back to the previous menu.
- 5 Navigation (arrows and OK)**
Navigate through the menus with the arrows, confirm your choice with **OK**.
In lens adjustment modes, the arrows are used to move, zoom or focus the lens. See **11** below.
In lens adjustment modes, or when the OSD is not showing, the **OK** button switches between modes: **Shift Adjustment** and **Zoom / Focus Adjustment**.
- 6 EXIT**
Go up one level in the OSD. When the top level is reached, press to close the OSD.
- 7 FREEZE**
Freeze the current frame.
- 8 DEFAULT**
When editing a parameter, press this button to restore the default value.
- 9 INFO**
Access information about the projector.
- 10 RE-SYNC**
Re-synchronise with the current input signal.

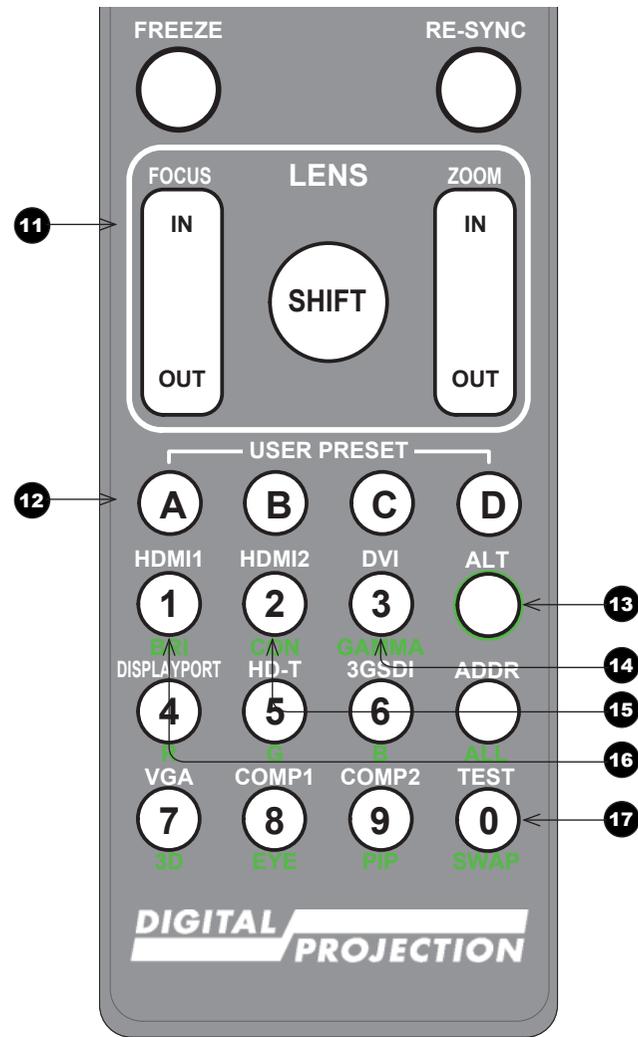

continues on next page...

Remote control

Notes

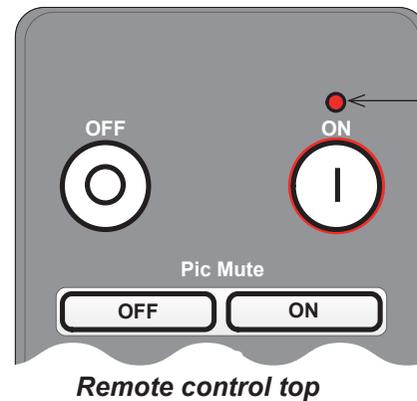

- 11** **LENS adjustment**
FOCUS IN / OUT: adjust focus.
SHIFT: press and hold this button, then use the Navigation arrow buttons to move the lens.
ZOOM IN / OUT: adjust zoom.
- 12** **USER PRESET A, B, C, D**
 Load user presets.
- 13** **ALT**
 Press and hold this button to access alternative functions for all buttons with a green label.
- 14** **DVI / GAMMA / numeric input 3**
 Select the DVI input.
 Use with **ALT** to switch to the next **Gamma** value:
 ...1.0, 1.8, 2.0, 2.2, 2.35, 2.5...
- 15** **HDMI 2 / CON / numeric input 2**
 Select the HDMI 1 input.
 Use with **ALT** to bring up the **Contrast** control, then adjust the value with the **LEFT** and **RIGHT** arrow buttons.
- 16** **HDMI 1 / BRI / numeric input 1**
 Select the HDMI 1 input.
 Use with **ALT** to bring up the **Brightness** control, then adjust the value with the **LEFT** and **RIGHT** arrow buttons.
- 17** **TEST / SWAP / numeric input 0**
 Show a test pattern. Press again to show the next test pattern:
 ...Off, White, Black, Red, Green, Blue, CheckerBoard, CrossHatch, V Burst, H Burst, ColorBar...
 When **PIP** mode is on, use this button with **ALT** to swap the main and sub images.

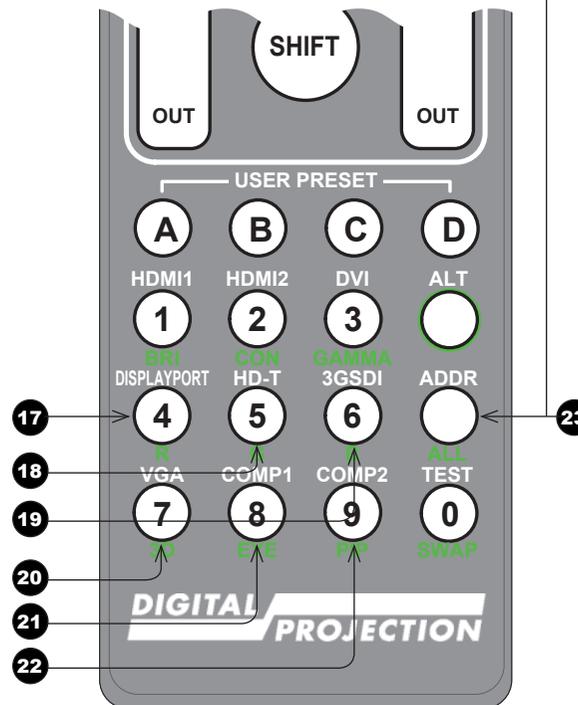

Remote control

Notes

- 17** **DISPLAYPORT / R / numeric input 4**
Select DisplayPort input.
- 18** **HD-T / G / numeric input 5**
Select the HDBaseT input.
- 19** **3GSDI / B / numeric input 6**
Select the 3G-SDI input.
- 20** **VGA / 3D / numeric input 7**
Select the VGA input.
Use with **ALT** to toggle the **3D Format** setting between **Off** and **Auto**.
- 21** **COMP1 / EYE / numeric input 8**
Select the Component 1 input.
Use with **ALT** to switch between left and right eye 3D dominance.
- 22** **COMP2 / PIP / numeric input 9**
Select the Component 2 input.
Use with **ALT** to switch on **Picture In Picture (PIP)** mode.
- 23** **ADDR / ALL (with red indicator at the top)**
Assign and unassign an IR remote address.
To assign an address:
 1. Press and hold this button until the indicator starts flashing.
 2. Release this button and while the indicator is still flashing, enter a two-digit address using the numeric input buttons. The indicator will flash three times quickly to confirm the change.**To unassign an address and return to the default address 00,**
 - Press and hold **ALT** and this button simultaneously until the indicator flashes to confirm the change.

Remote control top

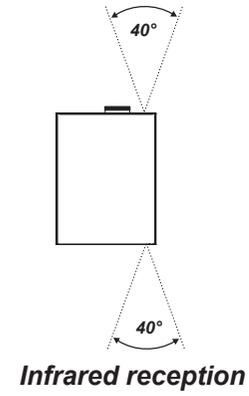

Remote control bottom

Notes

Infrared reception

The projector has infrared sensors at the front and back.

The angle of acceptance is 40°. Make sure that the remote control is within the angle of acceptance when trying to control the projector.

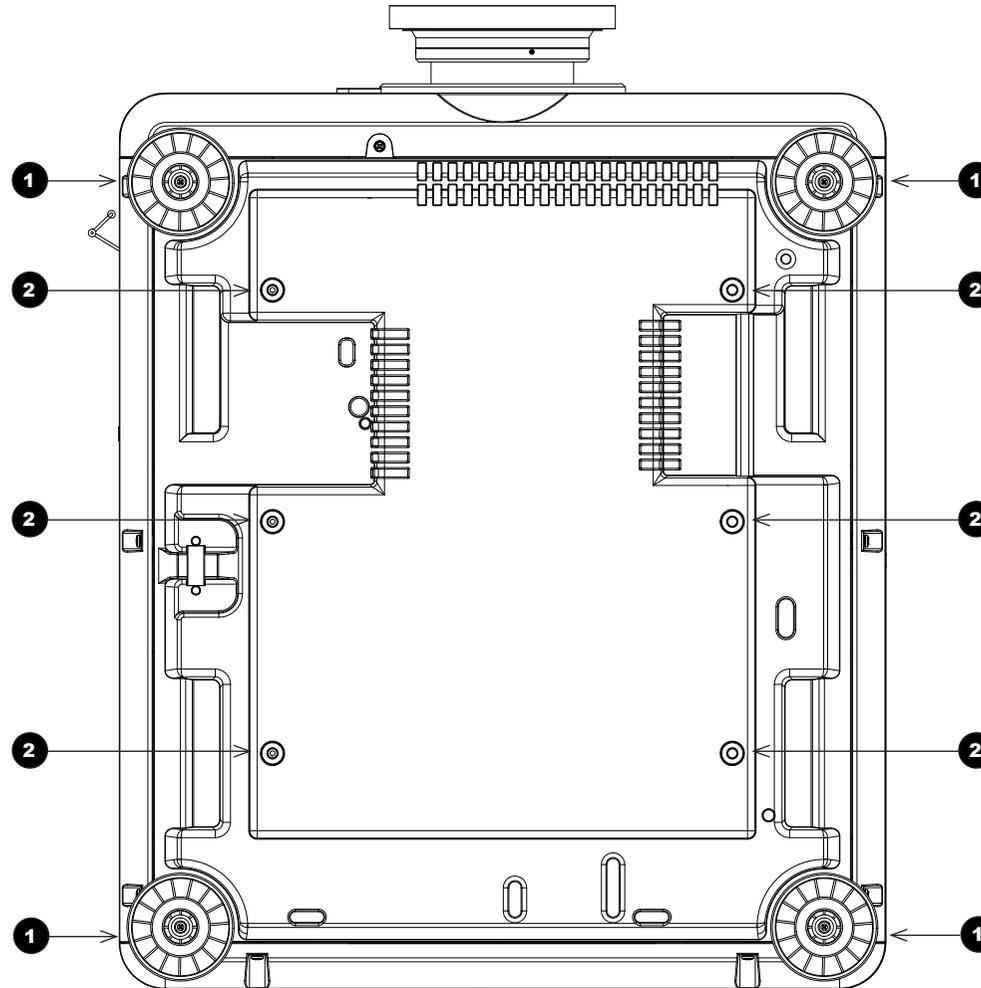

Notes

Positioning The Screen And Projector

1. Install the screen, ensuring that it is in the best position for viewing by your audience.
2. Mount the projector, ensuring that it is at a suitable distance from the screen for the image to fill the screen. Set the adjustable feet so that the projector is level, and perpendicular to the screen.

The drawing below shows the positions of the feet for table mounting, and the fixing holes for ceiling mounting.

- 1** Four adjustable feet
- 2** Six M4 holes for ceiling mount
The screws should not penetrate more than 15 mm into the body of the projector.

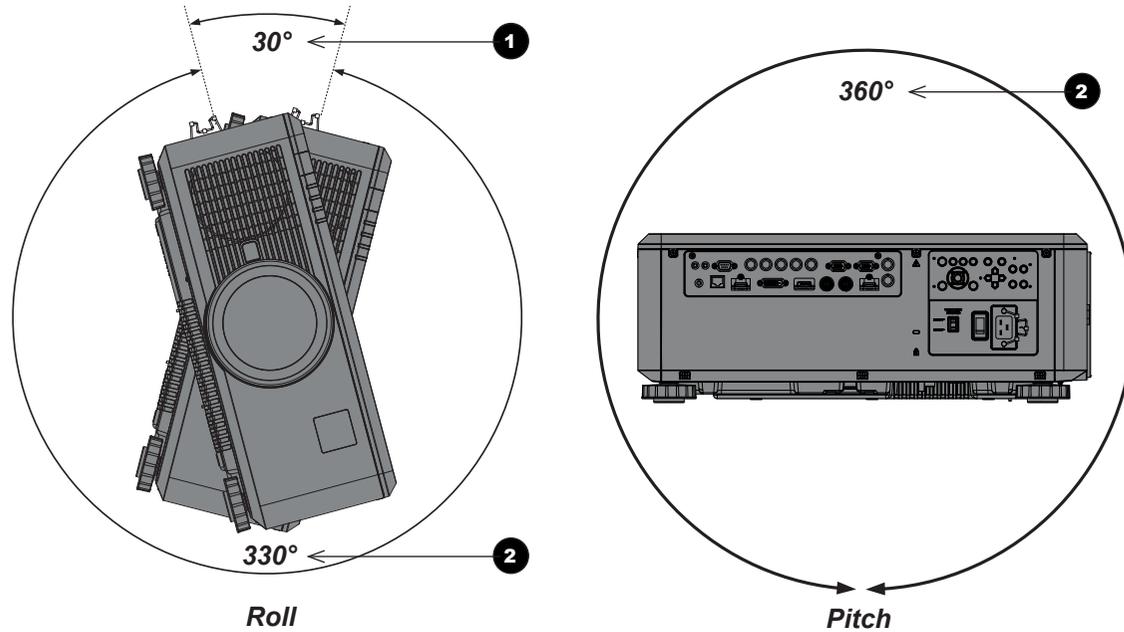

Notes

-  **Always allow the projector to cool for 5 minutes before disconnecting the power or moving the projector.**
-  **Ensure that there is at least 50 cm (19.7 in) of space between the ventilation outlets and any wall, and 30 cm (11.8 in) on all other sides.**
-  **Do not stack more than 3 projectors.**

Roll and pitch

The projector can be operated in numerous positions.

It is not recommended to position the projector in portrait mode with inputs facing upward, as shown in the diagram.

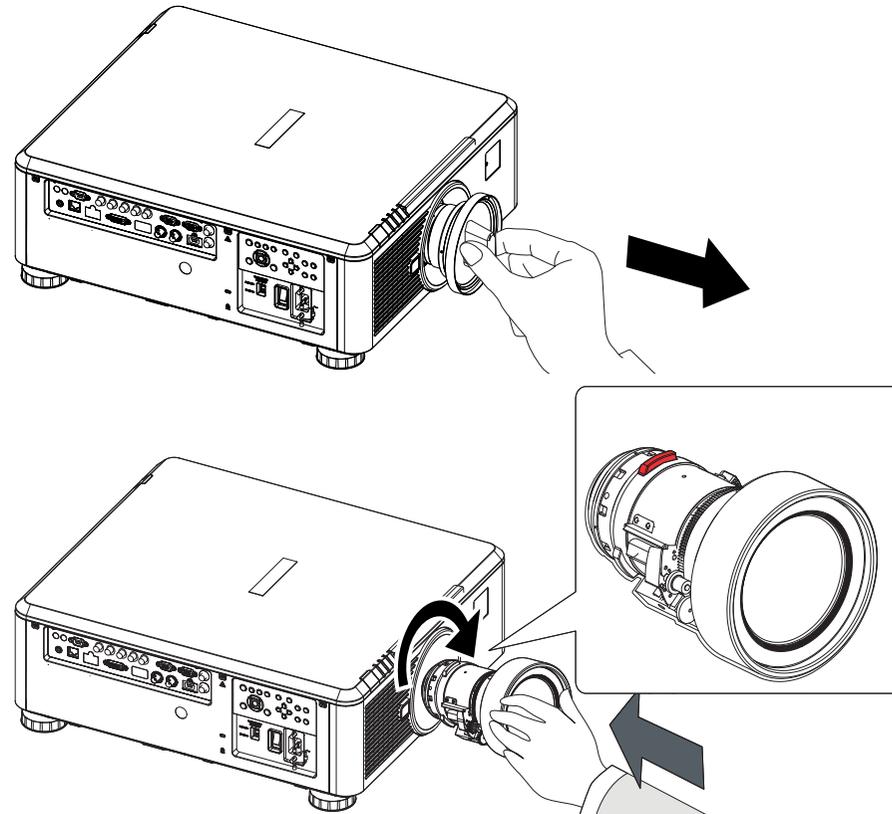

- 1** Positions to avoid: inputs side up
- 2** Recommended positions

Notes

Changing The Lens

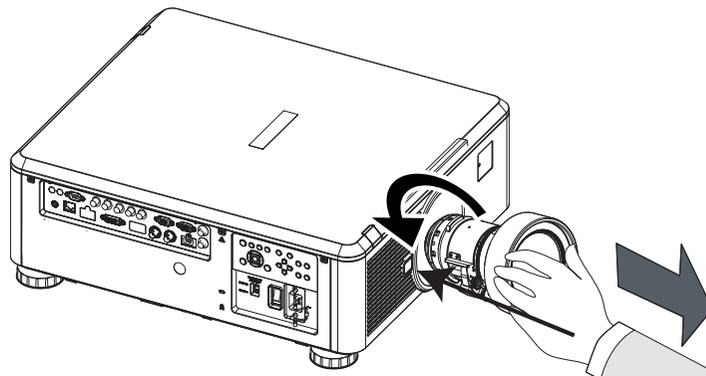

Inserting a new lens

1. Remove the front and rear lens caps.
2. Position the lens so that the labels are at the top, and gently insert it all the way into the lens mount.
3. Push the lens in firmly and turn it clockwise until it clicks into place.

Removing the lens

1. Push in the lens release lever, and turn the lens anti-clockwise.
2. Remove the lens.

Notes

Before changing the lens, always make sure the projector is switched off and fully disconnected from its power supply.

When changing the lens, avoid using excessive force as this may damage the equipment.

The lens is shipped separately.

Take care to preserve the original lens packaging and protective caps for future use.

The projector will not power on without the lens fitted.

Operating The Projector

Switching the projector on

1. Ensure a lens is fitted. Connect the power cable between the mains supply and the projector. (See *Connecting the power supply* above.) Switch on at the switch next to the power connector.
2. The **POWER** indicator lights red to signal that the projector is in STANDBY mode. Press one of the following buttons:
 - On the remote control, the **ON** button
 - On the projector control panel, the **POWER** button.

The fans begin working, then the **POWER** indicator begins flashing green. When the flashing stops, the **POWER** and **LIGHT** indicators both light steady green. The projector is switched on.

Switching the projector off

1. Press **OFF** on the remote control or **POWER** on the control panel, then press again to confirm your choice.

The **POWER** indicator on the control panel will start flashing amber, the system will go out and the cooling fans will run for a short time until the **POWER** indicator goes steady red to indicate that the projector has entered STANDBY mode.
2. If you need to switch the projector off completely, switch off at the mains power switch next to the power connector and then disconnect the power cable from the projector.

Notes

See also [Connecting The Power Supply](#) earlier in this guide.

The self-test is running when all the LEDs on the control panel are lit.

Use only the power cable provided.

Ensure that the power outlet includes a ground connection as this equipment **MUST** be earthed.

Handle the power cable carefully and avoid sharp bends. Do not use a damaged power cable.

Selecting an input signal

1. Connect one or more image sources to the projector.
2. Select the input you want to display:
 - Press one of the input buttons on the remote control.
 - Alternatively, open the On-screen display (OSD) by pressing **MENU**. Highlight **Input** from the main menu, press **ENTER/OK** and then select an input signal using the **UP ▲** and **DOWN ▼** arrow buttons. Press **ENTER/OK** to confirm your choice.

Selecting a test pattern

To display a test pattern:

- Press **TEST** on the remote control.
Change the test pattern using the **LEFT ◀** and **RIGHT ▶** arrow buttons. Test patterns are displayed in the following order:
White, Black, Red, Green, Blue, CheckerBoard, CrossHatch, V Burst, H Burst, ColorBar, Screen Layout, Off
- Alternatively, open the OSD by pressing **MENU**. Highlight **Test Patterns** from the main menu, then select a test pattern using the **LEFT** and **RIGHT** arrow buttons.

After the final test pattern, the projector exits test pattern mode and returns to the main image. To view test patterns again, you need to press **TEST** again. If you wish to exit the test patterns before you reach the final one,

- press **TEST** or **EXIT** at any time.

Notes

For full details of how to use the controls and the menu system, see the [Operating Guide](#).

Adjusting the lens

The lens can be adjusted using the **Lens** menu, or using the lens buttons on the remote control.

Lens menu

The **Lens** menu provides access to the **Lens Control** setting and the **Lens Center** command.

Lens Control allows **Zoom**, **Focus** and **Shift** adjustment using the arrow buttons. The setting operates in **Zoom/Focus Adjustment** and **Shift Adjustment** mode.

Press **ENTER/SELECT** to switch between the two modes.

Remote control

Use the remote control to adjust zoom, focus and shift directly, without opening a menu:

- **OK** enters lens control, then switches between **Zoom/Focus Adjustment** and **Shift Adjustment**.
- **EXIT** exits lens control and opens the **Lens** menu.
- **MENU** exits lens control and returns to the main image.
- The arrow buttons adjust zoom, focus and shift as indicated on the screen.

Adjusting the image

Orientation

- This can be set from the **Setup** menu.

Highlight **Orientation** and choose from **Front Tabletop**, **Front Ceiling**, **Rear Tabletop**, **Rear Ceiling** and **Auto-front**.

Keystone

- This can be set from the **Geometry** menu.

Picture

- Settings such as **Gamma**, **Brightness**, **Contrast**, **Saturation**, **Hue** and **Sharpness** can be set from the **Image** menu.

Notes

For full details of how to adjust the lens using the remote control, see [Remote Control](#) earlier in this guide.

 - RS232 connection example28

Signal Inputs

Digital inputs and outputs

- 1 HDBaseT**
Receives digital signal from HDBaseT-compliant devices.
- 2 HDMI 1**
HDMI 1.4a input. Connect an **HDMI** cable to the connector.
- 3 DVI-D**
This input can receive digital signal from a compatible source.
Supports sources up to 1920x1200 resolution, 24-60 Hz. Supports HDCP.
- 4 DisplayPort**
DisplayPort 1.1a input. Connect a DisplayPort cable to the connector.
Supports sources up to 1920x1200 resolution, 24-120 Hz. Supports HDCP.
- 5 3G-SDI in**
- 6 3G-SDI out**
Connect a 3G-SDI cable to distribute the 3G-SDI signal to another projector.
- 7 HDMI II**
HDMI 1.4 input. Connect an **HDMI** cable to the connector.

Notes

 For simultaneous HDBaseT and LAN connectivity, a third-party distribution product can be utilised to combine HDBaseT video stream with LAN connection for delivery to the projector.

 While the projector can receive 100/120Hz and display 3D at 100/120Hz, video processing is limited to 60Hz.

Analog inputs and outputs

- 1 Component**
RGBHV, RGsB or RGBS
 - Set **Color Space** in the **Color** menu to **Auto** or **RGB-Video**.**YPbPr or YCbCr**
 Set **Color Space** in the **Color** menu to **YPbPr** or **YCbCr**.

- 2 VGA**
 This input receives analog signals from a computer. When using this input, it is best to use a fully wired VGA cable to connect the source to the projector. This will allow the source to determine the projector’s capabilities via DDC and show an optimized image. Such cables can be identified as they have a blue connector shell.

- 3 Monitor Out**
 Connect an analog monitor (VGA) cable to the 15-pin D-type to output the signal received on the VGA input.

Notes

EDID on the DVI and VGA inputs

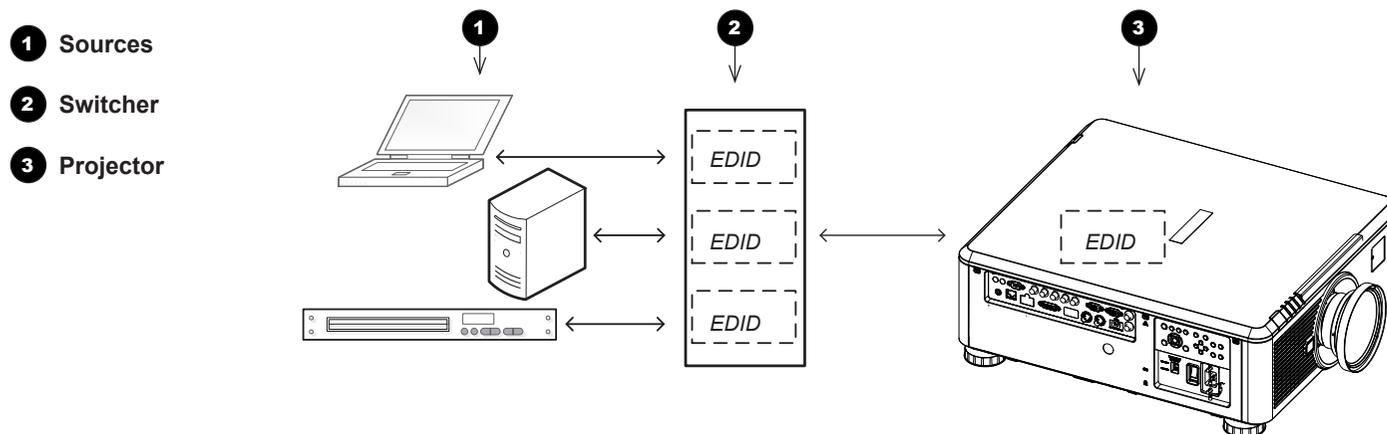

If you are using a computer DVI card or another source that obeys the EDID protocol, the source will automatically configure itself to suit the projector.

Otherwise refer to the documentation supplied with the source to manually set the resolution to the DMD™ resolution of the projector or the nearest suitable setting. Switch off the source, connect to the projector, then switch the source back on again.

Using HDMI/DVI switchers with the projector

When using an HDMI/DVI source switcher with the projector, it is important to set the switcher so that it passes the projector EDID through to the source devices. If this is not done, the projector may not be able to lock to the source or display the source correctly as its video output timings may not be compatible with those of the projector. Sometimes this is called transparent, pass-through or clone mode. See your switcher's manual for information on how to set this mode.

Notes

The EDIDs in the switcher should be the same as the one in the projector.

3D connections

3D sources up to 60Hz requiring frame doubling and left/right interleaving

1. Connect to either of the following inputs on the connection panel:
 - HDMI 1
 - HDMI 2
 - HDBaseT
2. Set **3D Format** in the **3D** menu to match the format of the incoming signal. Choose from **Auto**, **Side by Side (Half)** and **Top and Bottom**.

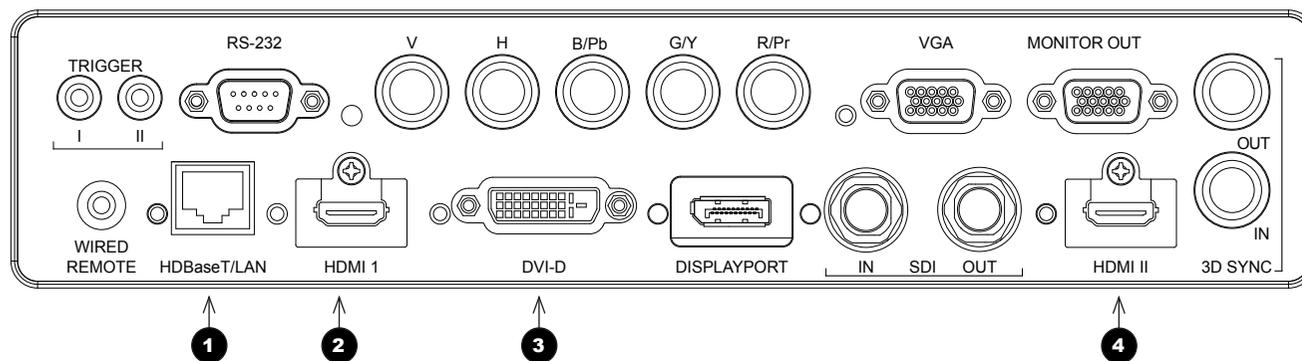

The **Frame Packing** format is automatically detected by the projector.

Frame sequential 3D sources up to 120Hz

- Connect to the DisplayPort input.
- The **Frame Sequential** format is automatically detected by the projector and is supported on the DisplayPort input only.

Dual Pipe 3D

1. Connect the left eye output to the **HDMI 1** socket and the right eye output to the **HDMI 2** socket.
2. Set **3D Format** in the **3D** menu to **Dual-Pipe**.

- 1** HDBaseT
- 2** HDMI 1 / Dual Pipe Left
- 3** DVI
- 4** HDMI 2 / Dual Pipe RIGHT

Notes

 While the projector can receive 100/120Hz and display 3D at 100/120Hz, video processing is limited to 60Hz.

This also applies to Dual Pipe 3D at 60 Hz per input.

3D Sync

3D Sync in

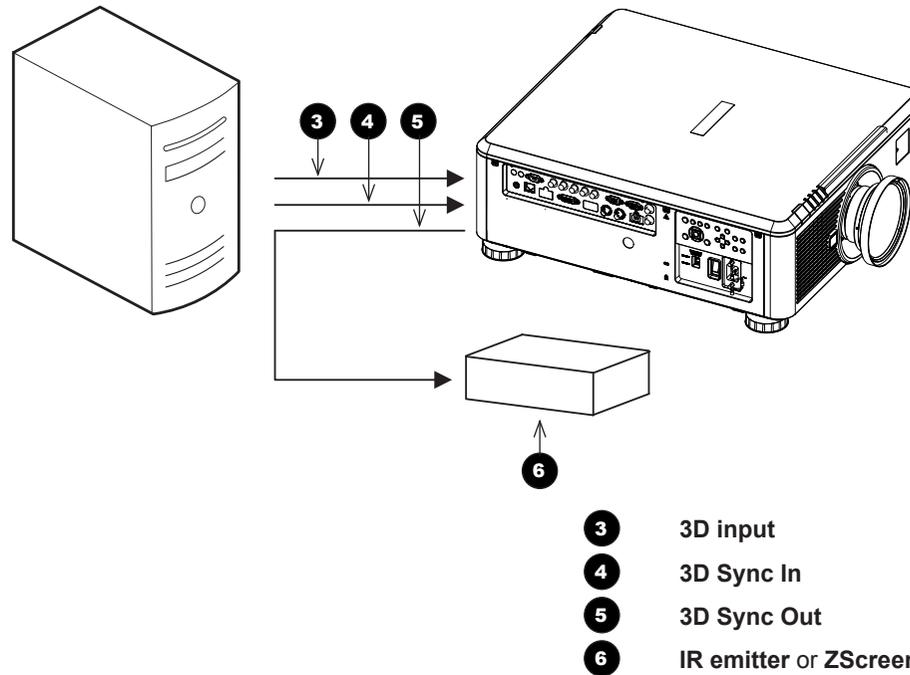

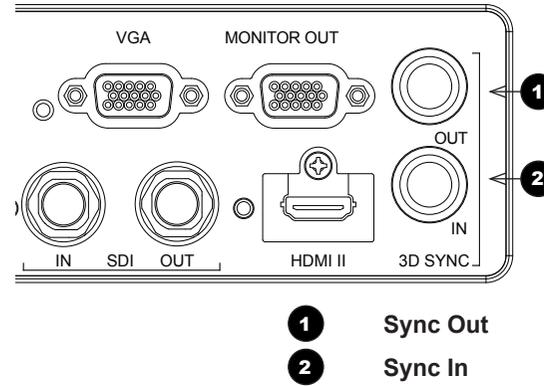

Sync input signal.

- Connect the 3D sync from your graphics card or server.

3D Sync out

Sync output signal. This may be affected by the **Sync Offset** setting in the **3D Control** menu.

Connect this to your IR emitter or ZScreen.

Notes

Control Connections

1 Trigger 1 & Trigger 2

The Trigger outputs are activated by one of the three following conditions, as set in the **Setup** menu:

- Screen trigger: can be connected to an electrically operated screen, automatically deploying the screen when the projector starts up, and retracting the screen when the projector shuts down.
- Aspect ratio trigger: can be used to control screen shuttering for different aspect ratios.
- RS232 trigger: can be used to control the screen or screen shuttering on receipt of an RS232 command

2 RS232

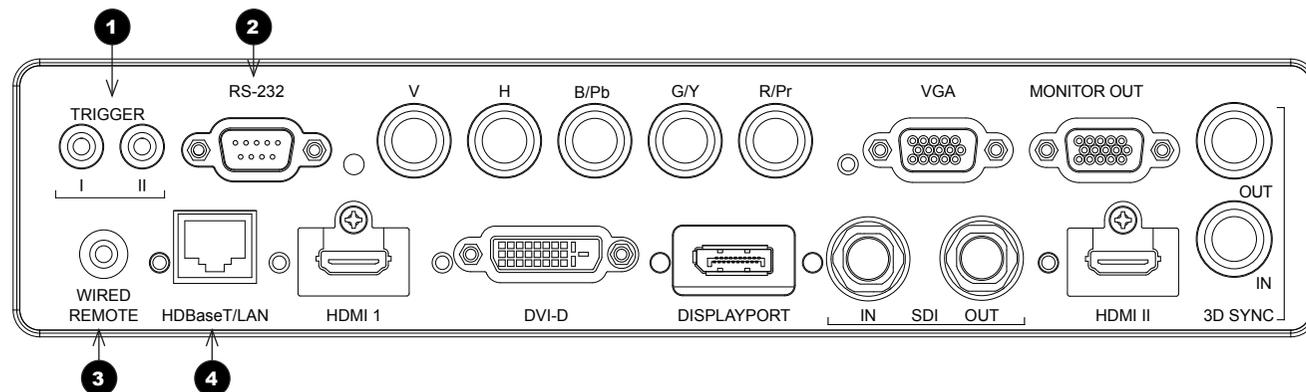

- All of the projector's features can be controlled via a serial connection, using commands described in the **Protocol Guide**.
- Use a straight-through cable to connect directly to a computer.

4 Wired Remote

The remote control can be connected using a standard 3.5 mm mini jack cable (tip-ring-sleeve, or TRS).

5 HDBaseT/LAN

The projector's features can be controlled via a LAN connection, using Digital Projection's **Projector Controller** application or a terminal-emulation program.

Notes

For a list of all commands used to control the projector via LAN, see the **Protocol Guide**.

Only one remote connection (RS232 or LAN) should be used at any one time.

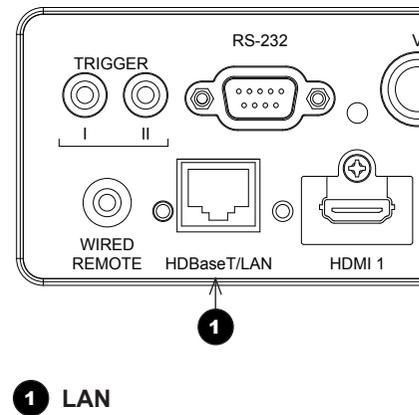

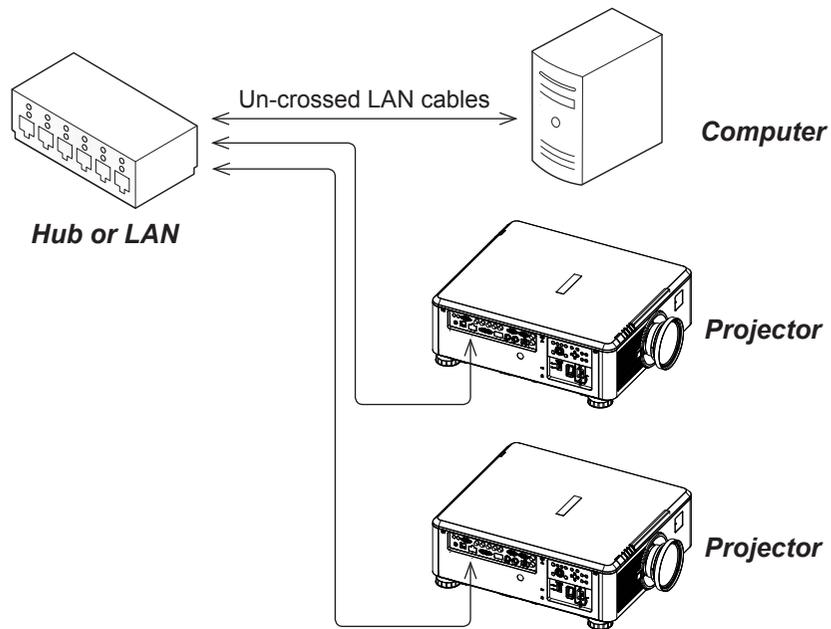

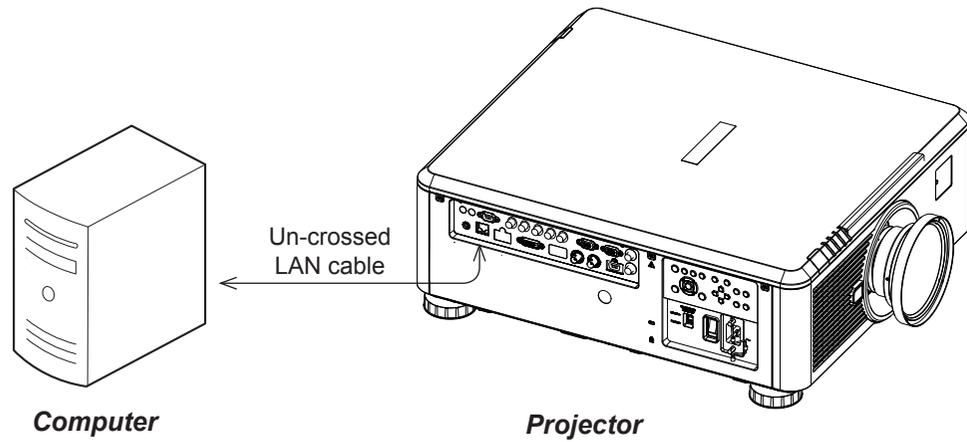

With a LAN connection the projector can serve a web page offering basic projector controls.

Projector Controller is available for download, free of charge, from the Digital Projection website.

For simultaneous HDBaseT and LAN connectivity, a third-party distribution product can be utilised to combine HDBaseT video stream with LAN connection for delivery to the projector.

LAN connection examples

The projector's features can be controlled via a LAN connection, using Digital Projection's **Projector Controller** application or a terminal-emulation program

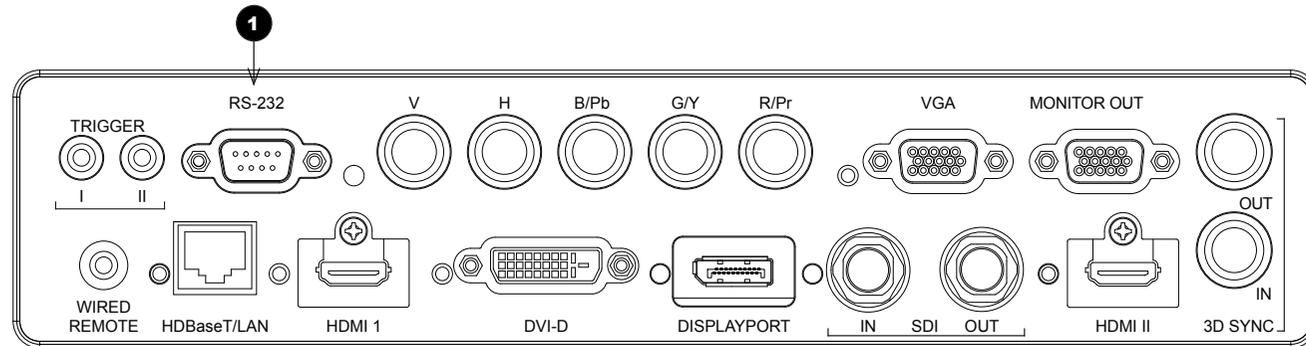

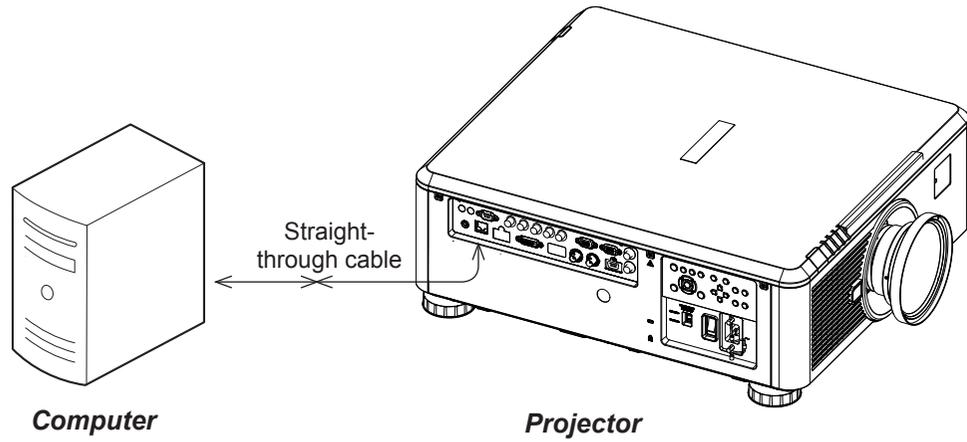

Notes

-  With a LAN connection the projector can serve a web page offering basic projector controls.
-  **Projector Controller** is available for download, free of charge, from the Digital Projection website.
-  For simultaneous HDBaseT and LAN connectivity, a third-party distribution product can be utilised to combine HDBaseT video stream with LAN connection for delivery to the projector.

RS232 connection example

All of the projector's features can be controlled via a serial connection, using commands described in the *Protocol Guide*.

1 RS232

Notes

 The *Protocol Guide* is available separately.

Using The Menu

Opening the OSD

Access the various menus using either the projector control panel or the remote control. On either device,

- press the **MENU** button.

The on-screen display (OSD) opens showing the list of available menus.

Opening a menu

Move up and down the list using the **UP ▲** and **DOWN ▼** arrow buttons. To open a menu,

- press **ENTER** on the control panel or **OK** on the remote control.

This guide refers to the above two buttons as **ENTER/OK**.

Exiting menus and closing the OSD

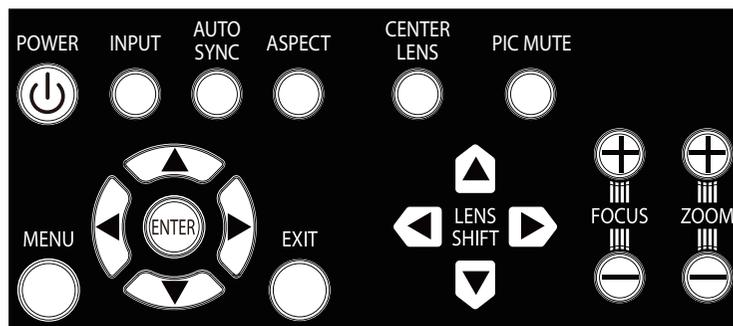

To go back to the previous page,

- press **EXIT**.

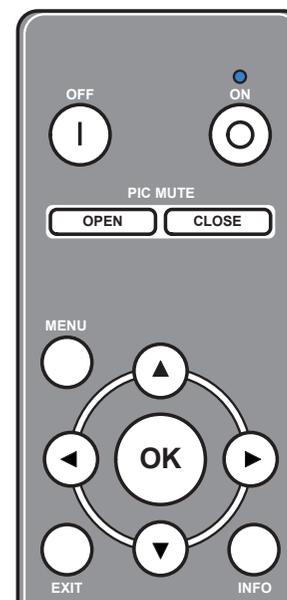

When you reach the top level, pressing **EXIT** will close the OSD.

To close the OSD from any page,

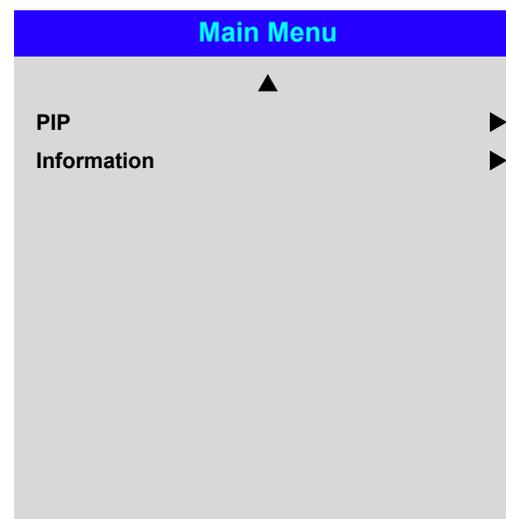

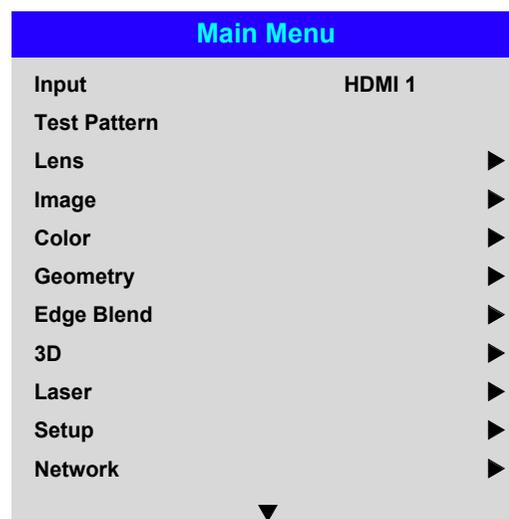

- press **MENU**.

Projector control panel

Remote control

On-screen display (OSD): top level menus

Notes

Inside a menu

When you open a menu, the page consists of the following elements:

- Title bar at the top
Shows which menu you have accessed.
- Highlighted item
- Available and unavailable items
Unavailable items appear a pale gray color. Whether an item is available may depend on other settings.
- The text or symbol to the right of an item shows whether the item:
 - has a value that can be changed (the current value is shown)
 - opens a sub-menu (an arrow button ► is displayed)
 - executes a command (the space to the right of the item is blank).

Accessing sub-menus

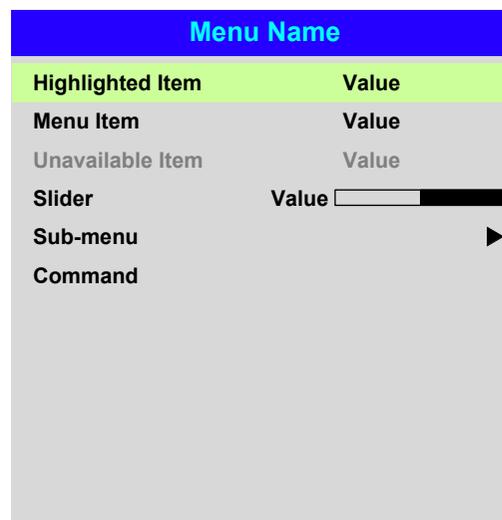

Use the **UP ▲** and **DOWN ▼** arrow buttons to highlight the sub-menu, then press **ENTER/OK**.

Executing commands

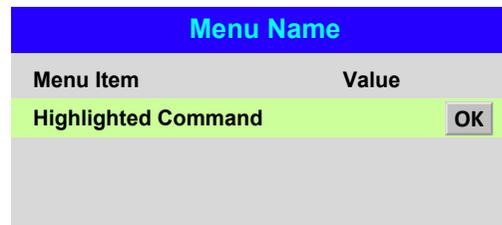

If the item contains a command, highlighting it reveals an **OK** button.

Press **ENTER/OK** to execute the highlighted command.

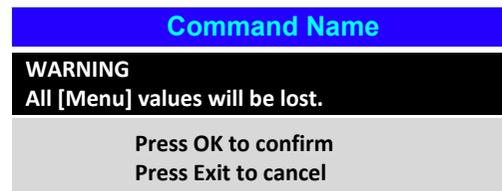

You may be asked for confirmation. Use the **ENTER/OK** to confirm, or **EXIT** to cancel.

Inside a menu

Highlighted command

Confirmation dialog

Notes

The highlighted item has green background.

Editing projector settings

If the highlighted menu item contains a list of values to choose from, you can change the value by doing the following:

1. Highlight the menu item and press **ENTER/OK**.
2. In the list of values that opens, use the **UP ▲** and **DOWN ▼** arrow buttons to highlight a value, then press **ENTER/OK** again to select the highlighted value.

Using a slider to set a value

Some parameters open a slider. To set such a parameter:

1. Press the **LEFT ◀** or **RIGHT ▶** arrow button, or **ENTER/OK**. The arrow buttons will open the slider and adjust the value at the same time. **ENTER/OK** will open the slider without altering the initial value.
2. Use the **LEFT ◀** and **RIGHT ▶** arrow buttons to move the slider.
3. When ready, press **EXIT** to exit the slider and return to the menu, or press **MENU** to exit the slider without showing the menu again.

Editing numeric values

Some parameters take numeric values without using sliders - for example, color matching values or IP addresses.

1. Use the **UP ▲** and **DOWN ▼** arrow buttons to highlight the row containing the numeric field you wish to edit.
2. Press **ENTER/OK** to enter edit mode. A numeric field in edit mode is white text on blue background.
3. In edit mode:
 - Use the **UP ▲** arrow button to increase the numeric value.
 - Use the **DOWN ▼** arrow button to decrease the numeric value.
4. Use the **LEFT ◀** and **RIGHT ▶** arrow buttons to edit the next or previous numeric fields within the same row.
5. Once ready, press **ENTER/OK** to exit edit mode.

Menu Name

Highlighted Row	x: 0.315	y: 0.662
Row	x: 0.146	y: 0.043
Row	x: 0.276	y: 0.283

Numeric values

Notes

Some menu items may be unavailable due to settings in other menus. Unavailable menu items appear gray.

Using The Projector

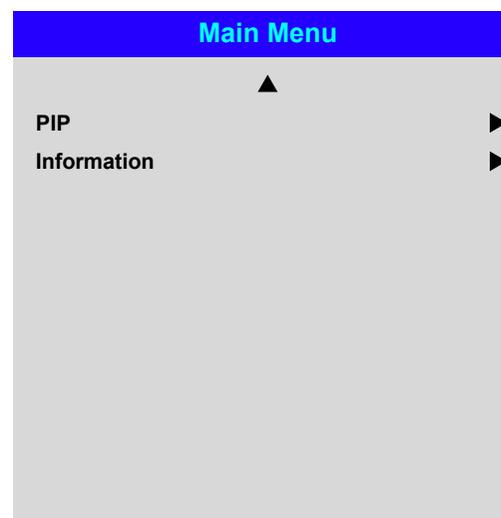

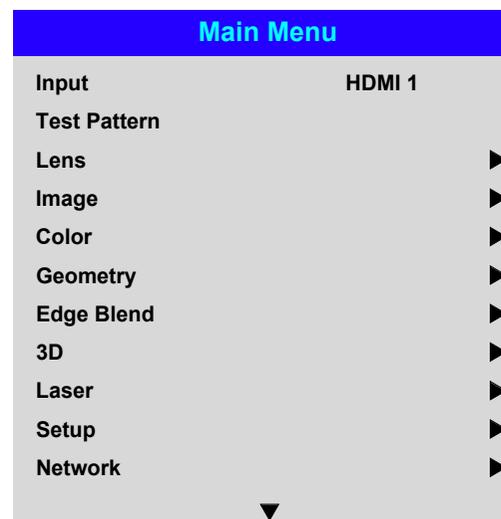

Main menu

- Input**
 Press **ENTER/OK** to open the list of available inputs.
 Use the **UP ▲** and **DOWN ▼** arrow buttons to select an input from the list, then press **ENTER/OK** to confirm your choice.
 Press **EXIT** to return to the main menu.
- Test Pattern**
 Choose from:
...Off, White, Black, Red, Green, Blue, CheckerBoard, CrossHatch, V Burst, H Burst, ColorBar...
 Use the **LEFT ◀** and **RIGHT ▶** arrow buttons to switch between values.
- Lens, Image, Color, Geometry, Edge Blend, 3D, Laser, Setup and Network**
 Press **ENTER/OK** to open these menus and access various settings.

Press the **DOWN ▼** arrow at the bottom of the page to access additional menus:

- PIP and Information**
 Press **ENTER/OK** to open these menus and access various settings.

Press the **UP ▲** arrow to return to the previous page.

Main menu, page 1 and 2

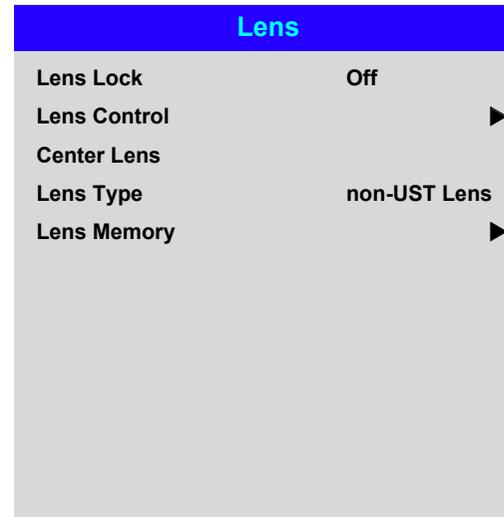

Notes

 See [Signal Inputs](#) in the [Connection Guide](#) for further information about the available inputs and connections.

 Selecting a test pattern hides the OSD. Press **EXIT** to hide the test pattern, and then press **MENU** to show the OSD.

Lens menu

- Lens Lock**
 When this feature is **On**, all other **Lens** menu items are disabled.
- Lens Control**
 Opens a sub-menu, see below.
- Center Lens**
 Centers the lens.
- Lens Type**
 Choose a UST or a non-UST lens.
- Lens Memory**
 Opens a sub-menu, see next page.

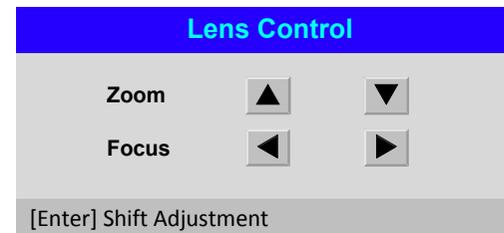

Notes

Lens Control

Lens Control settings operate in **Zoom/Focus Adjustment** and **Shift Adjustment** mode. Press **ENTER/OK** to switch between modes.

When in **Zoom/Focus Adjustment** mode:

- Use the **UP ▲** and **DOWN ▼** arrow buttons to adjust **Zoom**.
- Use the **LEFT ◀** and **RIGHT ▶** arrow buttons to adjust **Focus**.

When in **Shift Adjustment** mode, use the arrow buttons to adjust **Shift**.

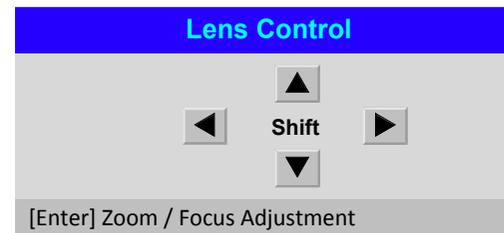

Image menu

- **Picture Mode**

Choose from **High Bright**, **Presentation** and **Video**.

Use a different setting depending the type of input source.

Press **ENTER/SELECT** to open the list.

Use the **UP ▲** and **DOWN ▼** arrow buttons to select a picture mode from the list, then press **ENTER/OK** to confirm your choice.

Press **EXIT** to return to the main menu.

- **Dynamic Black**

Set to **On** to allow for increased contrast in darker scenes by modulating the light source.

- **Gamma**

Choose a de-gamma curve from **1.0**, **1.8**, **2.0**, **2.2**, **2.35**, **2.5**, **S-Curve** and **DICOM**.

Used correctly, the **Gamma** setting can improve contrast while maintaining good details for blacks and whites.

If excess ambient light washes out the image and it is difficult to see details in dark areas, lower the **Gamma** setting to compensate. This improves contrast while maintaining good details for blacks. Conversely, if the image is washed out and unnatural, with excessive detail in black areas, increase the setting.

S-Curve is an enhanced mid-tone gamma.

DICOM is a simulated DICOM display, which can be used for training applications.

- **Brightness, Contrast, Saturation, Hue, Sharpness**

Highlight the setting you wish to edit, and then press **ENTER/OK**, or the **LEFT ◀** or **RIGHT ▶** arrow button to open the slider.

Use the **LEFT ◀** and **RIGHT ▶** arrow buttons to adjust the slider.

Press **EXIT** to close the slider and return to the menu, or **MENU** to close the slider and return to the projected image.

- **Noise Reduction, Position and Phase**

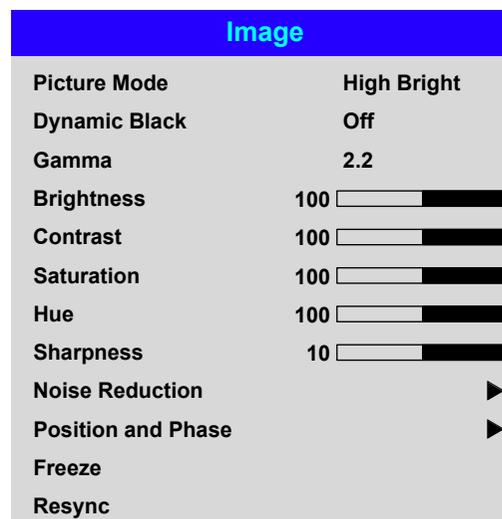

These items open sub-menus, see next page.

- **Freeze**

Freezes the current frame.

- **Resync**

Press **ENTER/OK** to force the projector to resynchronise with the current input.

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

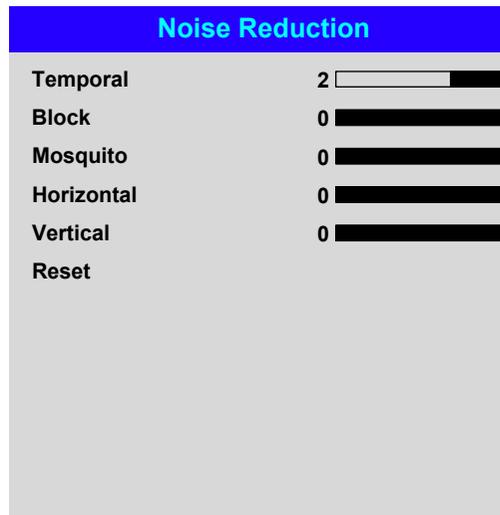

Noise Reduction and Position and Phase are only available when the projector is connected to an analog VGA source.

Image menu continued from previous page

Noise Reduction

- **Temporal**
A time-based filter that removes the noise on the luminance component.
- **Block**
This filter helps reduce block noise, which appears like small blocks in the image and is caused by MPEG compression.
- **Mosquito**
This filter helps reduce mosquito noise, which appears around the edges of the image and is caused by the image compression algorithm.
- **Horizontal, Vertical**
These filters soften the image.
- **Reset**

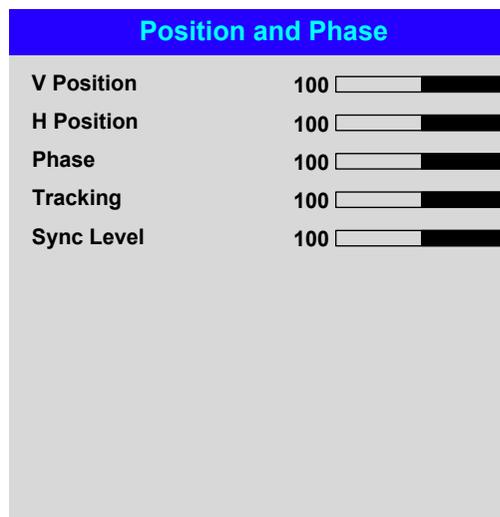

Position and Phase

- **V Position and H Position**
Set the sliders as required.
- **Phase**
Adjusts the phase of the pixel sampling clock relative to the incoming signal. Adjust the phase if noise is visible.
- **Tracking**
Adjusts the frequency of the pixel sampling clock. Flicker or vertical banding indicate poor tracking.
- **Sync Level**
Adjusts the voltage level of the signal detection circuitry. Adjust if the projector loses sync during scenes where the signal drops below black.

Highlight the setting you wish to edit, and then press **ENTER/OK**, or the **LEFT ◀** or **RIGHT ▶** arrow button to open the slider.

Use the **LEFT ◀** and **RIGHT ▶** arrow buttons to adjust the slider.

Press **EXIT** to close the slider and return to the menu, or **MENU** to exit both the slider and the menu.

Notes

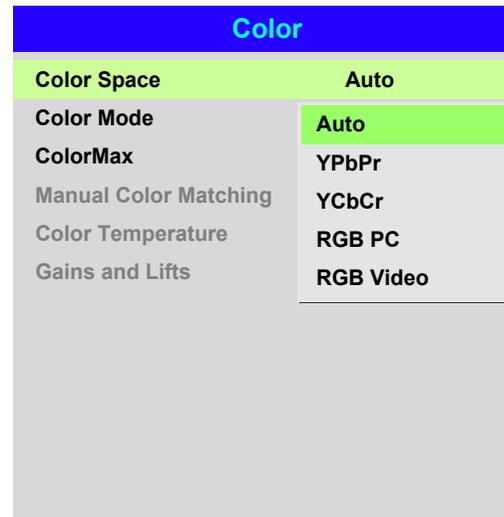

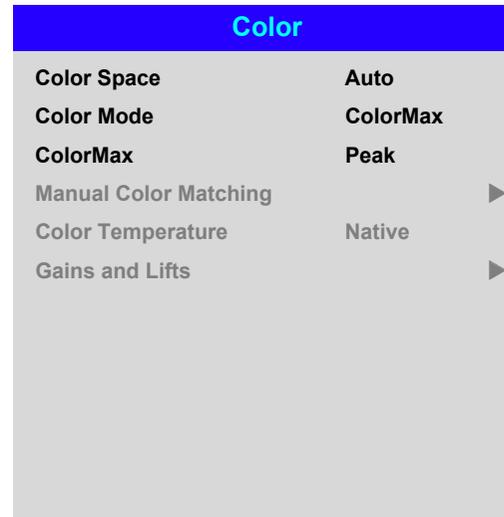

- Some of the settings within the **Position and Phase** sub-menu, **Phase, Tracking and Sync Level**, affect only VGA input source. These settings are not available if the projector is using a different source.
- Adjust the **Phase** after adjusting **Tracking**.

Color menu

Color Space

In most cases, the **Auto** setting determines the correct colorspace to use. If it does not, you can choose a specific colorspace:

Choose from **Auto**, **YPbPr**, **YCbCr**, **RGB PC** and **RGB Video**.

Notes

Color Mode

The projector can work in the following color modes: **ColorMax**, **Manual Color Matching**, **Color Temperature** and **Gains and Lifts**.

Color	
Color Space	Auto
Color Mode	ColorMax
ColorMax	ColorMax
Manual Color Match	Manual Color Matching
Color Temperature	Color Temperature
Gains and Lifts	Gains and Lifts

ColorMax

1. Set **Color Mode** to **ColorMax**.
2. Navigate to the **ColorMax** setting. Choose from **HDTV**, **Peak**, **User 1** and **User 2**.

User 1 and **User 2** are user-defined color gamuts set via the **Setup > ColorMax** menu.

Color	
Color Space	Auto
Color Mode	ColorMax
ColorMax	Peak
Manual Color Matching	HDTV
Color Temperature	Peak
Gains and Lifts	User 1
	User 2

Notes

 Only one color mode can be selected at a time. Settings used by the other color modes are disabled.

 See [Setup menu](#) for further information about setting up the **User 1** and **User 2** color gamuts.

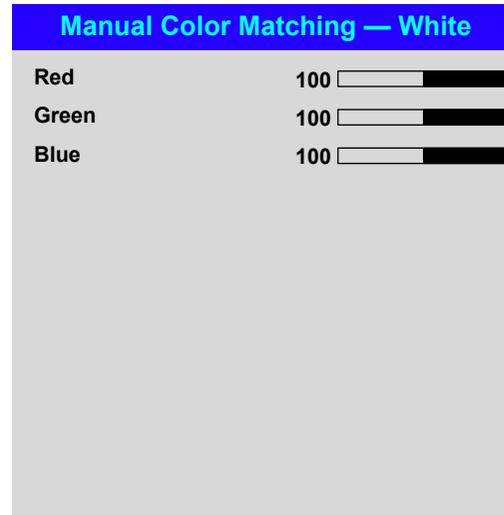

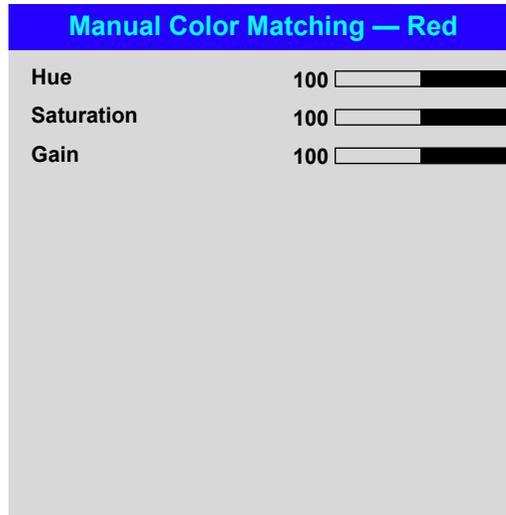

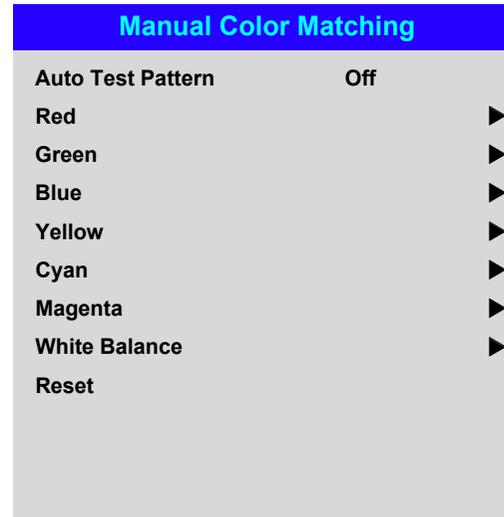

Color menu continued from previous page

Manual Color Matching

1. Set **Color Mode** to **Manual Color Matching**.
2. Open the **Manual Color Matching** submenu.

Here you can do the following:

- Switch **Auto Test Pattern On** and **Off**.
- Adjust **Hue, Saturation** and **Gain** settings for each individual color to improve the color balance of the projected image.
- Adjust white balance RGB values.
- Reset all values.

Notes

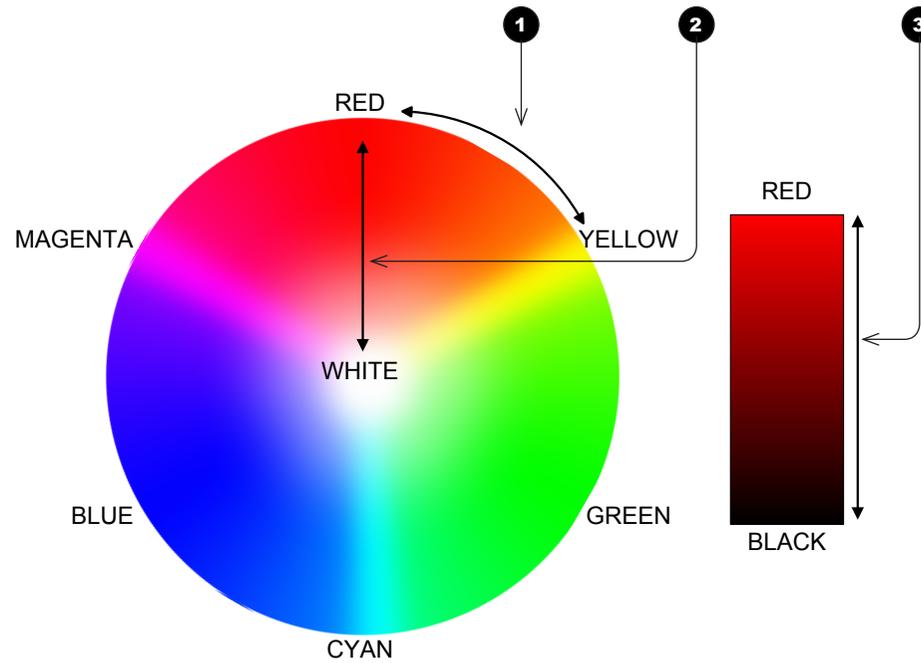

For more details about the **Hue, Saturation and Gain** settings, see [Color matching parameters explained](#) further in this guide.

Color menu continued from previous page

Color matching parameters explained

The levels of hue, saturation and gain in the **Manual Color Matching** menu change the color values in the following ways:

- 1 Hue**
Specifies the position of each color (*red, yellow, green, cyan, blue* and *magenta*) relative to its neighboring colors.
- 2 Saturation**
Specifies the level of white in each color (i.e. how "pale" each color is).
- 3 Gain**
Controls the amount of light that goes into each color, i.e. the lowest gain would produce black.

Notes

Color menu continued from previous page

Color Temperature

1. Set **Color Mode** to **Color Temperature**.
2. Navigate to the **Color Temperature** setting. Choose a value from **3200K** (warmer) to **9300K** (cooler) or **Native** (no correction).

Color	
Color Space	Auto
Color Mode	Color Temperature
ColorMax	Peak
Manual Color Matching	▶
Color Temperature	Native
Gains and Lifts	3200K
	5400K
	6500K
	7500K
	9300K
	Native

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Color menu continued from previous page

Gains and Lifts

Lifts allow you to adjust black levels of individual colors, while gains adjust the bright part of the scale.

Set the sliders as required.

Gains and Lifts	
Red Lift	100 <input type="range"/>
Green Lift	100 <input type="range"/>
Blue Lift	100 <input type="range"/>
Red Gain	100 <input type="range"/>
Green Gain	100 <input type="range"/>
Blue Gain	100 <input type="range"/>
Reset	

Notes

Geometry menu

This menu allows you to compensate for image distortions caused by an unusual projection angle or irregular screen surface.

Rotation	▶
Pincushion / Barrel	▶
Arc	▶
Custom Warp	Off

Geometry, E-Vision Laser 10K

Notes

 Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

 This menu differs slightly between E-Vision Laser projectors: there is an additional menu, **Arc**, on E-Vision Laser 10K.

 See next page for further information about the **TheaterScope** aspect ratio.

Aspect Ratio

This feature defines the aspect ratio of the source. Use the Screen Setting feature (Setup menu) to define the screen aspect ratio.

If you choose a preset aspect ratio from here, it will give you the best fit for your selection.

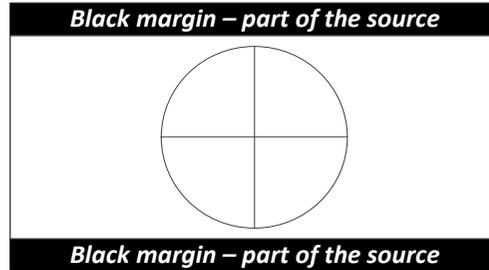

Choose from:

- 5:4
- 4:3
- 16:10
- 16:9
- 1.88
- 2.35
- TheaterScope
- Source
- Unscaled

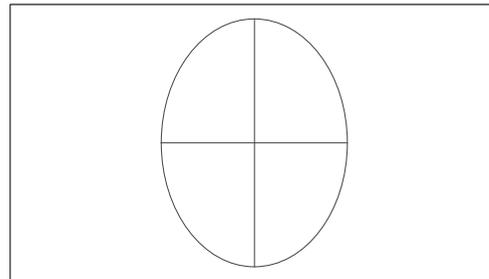

Theaterscope setting

The **TheaterScope** setting is used in combination with an anamorphic lens to restore 2.35:1 images packed into a 16:9 frame. Such images are projected with black lines at the top and bottom of the 16:9 screen to make up for the difference in aspect ratios.

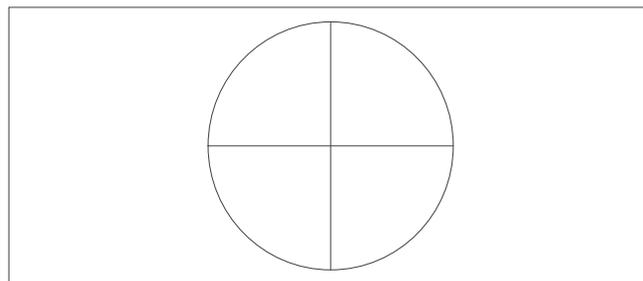

Without an anamorphic lens and without the TheaterScope setting applied, a 16:9 source containing a 2.35:1 image looks like this:

If we change the setting to **TheaterScope**, the black lines will disappear but the image will stretch vertically to reach the top and bottom of the DMD™:

An anamorphic lens will stretch the image horizontally, restoring the original 2.35 ratio:

Notes

 TheaterScope is used with an anamorphic lens.

 If you use TheaterScope, set your screen aspect ratio to 16:9.

.Geometry menu continued from previous page

Digital Zoom & Shift (E-Vision Laser 7500 and 8500)

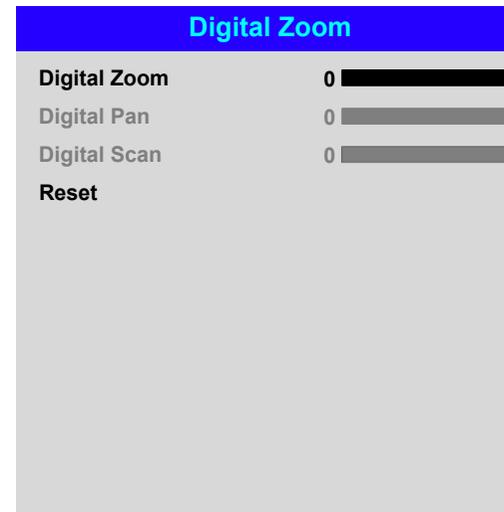

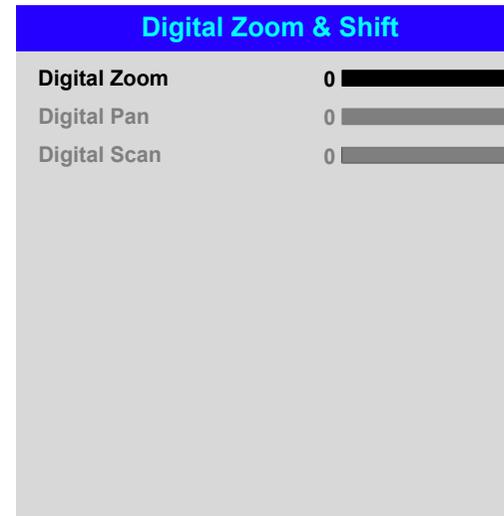

Digital zooming enlarges a section of the image, while the area outside the enlarged section is cropped out to preserve the overall image size.

- **Digital Zoom** defines the level of zoom that needs to be applied. If **Digital Zoom** is set to **0**, then the other settings in the menu will be disabled.
- **Digital Pan** and **Digital Scan** specify the area that is being enlarged:
 - **Digital Pan** adjusts the horizontal coordinates.
 - **Digital Scan** adjusts the vertical coordinates.

Digital Zoom (E-Vision Laser 10K)

This menu features the same settings as the *Digital Zoom & Shift* menu on the E-Vision Laser 7500 and 8500 OSD.

In addition it has a **Reset** command, which restores the default **Digital Zoom**, **Digital Pan** and **Digital Scan** values.

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Geometry menu continued from previous page

Overscan

Use this setting to compensate for noisy or badly defined image edges.

Crop removes unwanted artifacts from the edges of your image by cropping the edges.

Zoom increases the size of the image to force the edges off-screen.

Geometry	
Aspect Ratio	Source
Digital Zoom & Shift	▶
Overscan	Off
Blanking	Off
Keystone	Crop
4 Corners	Zoom
Rotation	▶
Pincushion / Barrel	▶
Custom Warp	Off

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Image with noisy edges

Overscanned image

Geometry menu continued from previous page

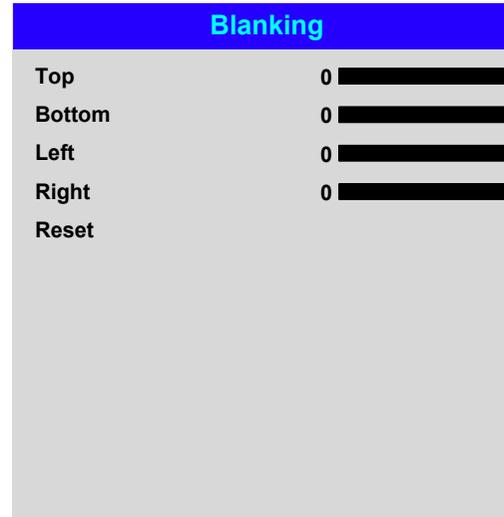

Blanking

Use this feature to:

- fit an odd-sized screen;
- cut off timecode dots in the top line of a picture;
- cut off subtitles, etc.

Select the edge you wish to blank and use the **LEFT** ◀ and **RIGHT** ▶ arrow buttons to determine the amount of correction.

Use the **Reset** command to restore blanked edges.

Notes

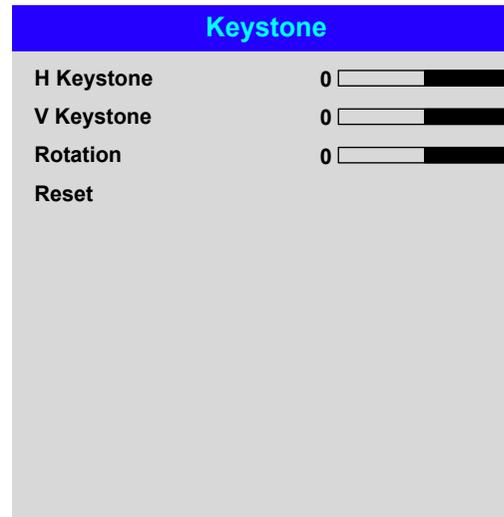

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Geometry menu continued from previous page

Keystone

Use this setting to compensate for any distortion caused by the projector being in a different horizontal or vertical plane to the screen.

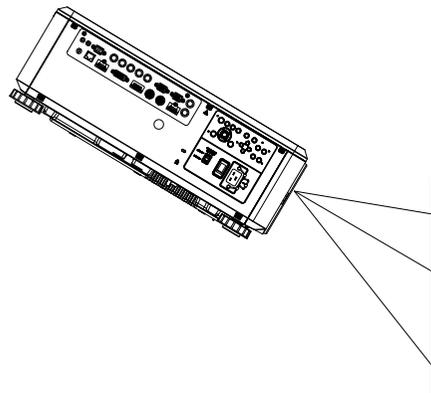

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Keystone example

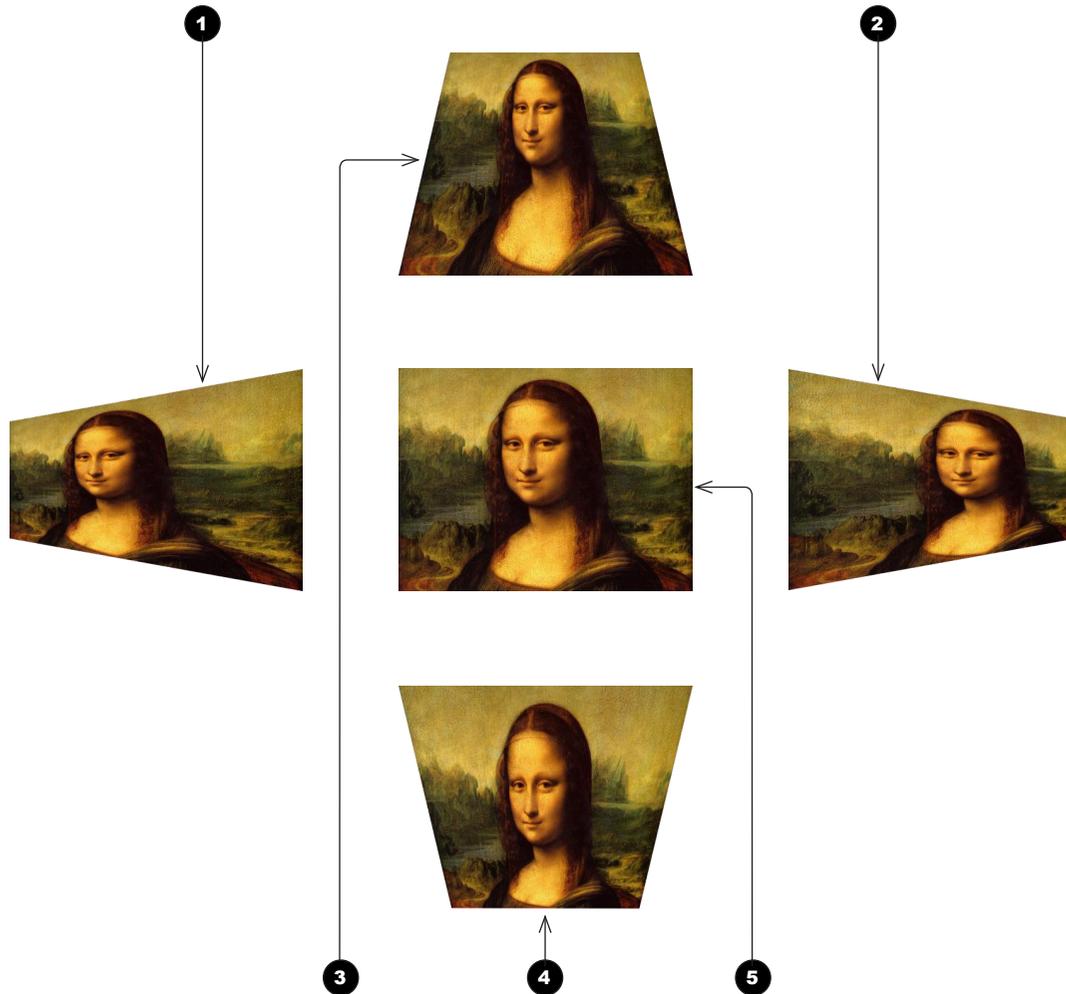

- 1 The projector is positioned at an angle
- 2 The resulting image is distorted
- 3 The image is corrected when Keystone is applied

Geometry menu continued from previous page

Keystone settings

- 1 Projector to the left**
 The projector is positioned to the left of the screen.
 To correct, apply a positive **Horizontal Keystone** value using the **RIGHT** arrow button.
- 2 Projector to the right**
 The projector is positioned to the right of the screen.
 To correct, apply a negative **Horizontal Keystone** value using the **LEFT** arrow button.
- 3 Projector high**
 The projector is positioned above the screen at a downward angle.
 To correct, apply a negative **Vertical Keystone** value using the **DOWN** arrow button.
- 4 Projector low**
 The projector is positioned below the screen at an upward angle.
 To correct, apply a positive **Vertical Keystone** value using the **UP** arrow button.
- 5 Projector straight**
 The projector is directly opposite the screen at a right angle both horizontally and vertically.
 No correction is needed.

Horizontal and vertical keystone corrections

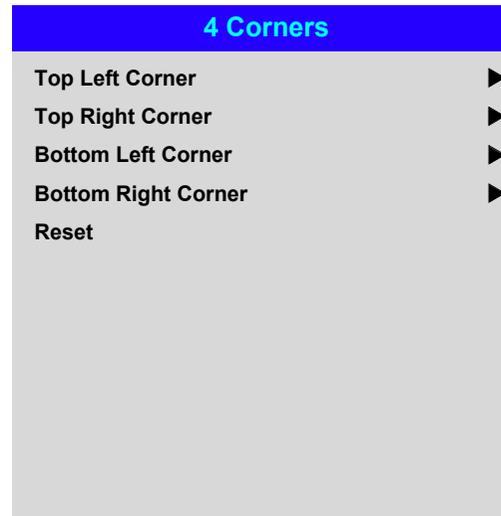

Notes

 Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Geometry menu continued from previous page

4 Corners

For each corner, apply horizontal and / or vertical correction as necessary to restore the rectangular shape of the image.

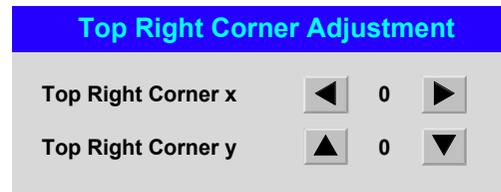

Top Right Corner example

In this illustration, the top right corner requires both horizontal and vertical correction.

Top Right Corner correction

Notes

 Corner corrections provide a simple setup for awkward installations and irregular shaped screens that may distort the image. To apply a similar (but less flexible) correction, while preserving the original aspect ratio of the image, use the **Keystone** menu.

 Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

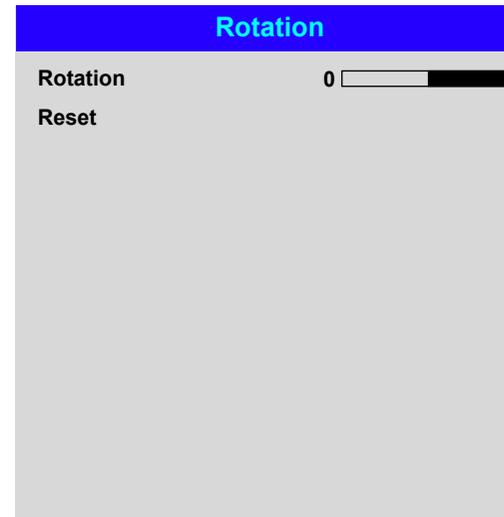

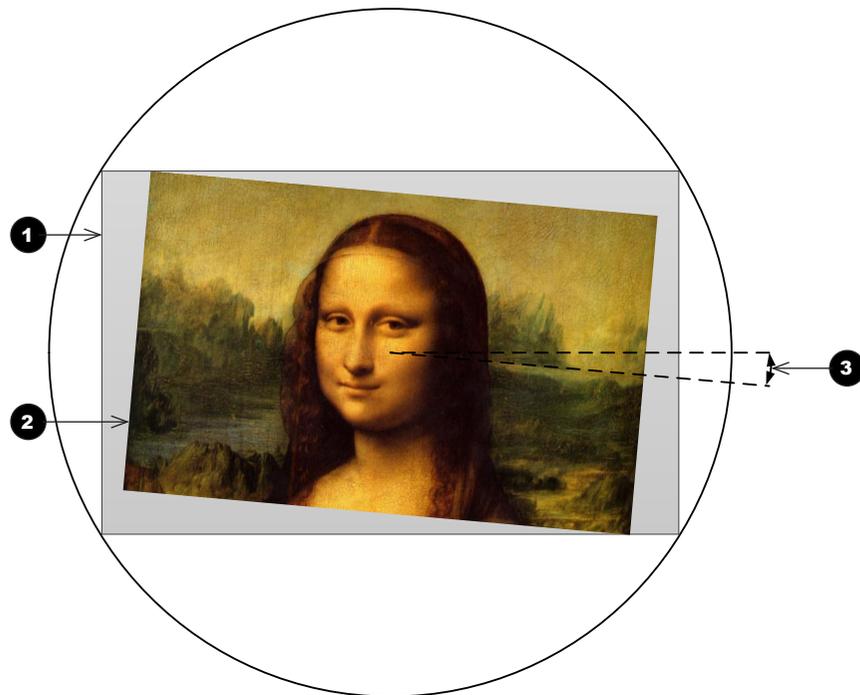

Geometry menu continued from previous page

Rotation

Use this feature for example to correct a mounting error causing the image not to be level with the screen.

Rotation example

- 1** **DMD™ area**
The DMD™ is not rotated. It still covers the area that would be occupied by the image without correction.
- 2** **Rotated image**
The image is smaller than the surrounding DMD™ area. It is scaled in order to remain within the DMD™ area.
- 3** **Angle of rotation**
The angle equals a quarter of the **Rotation** setting.
In this example the angle is 5°, therefore **Rotation = 20**.

Notes

 Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

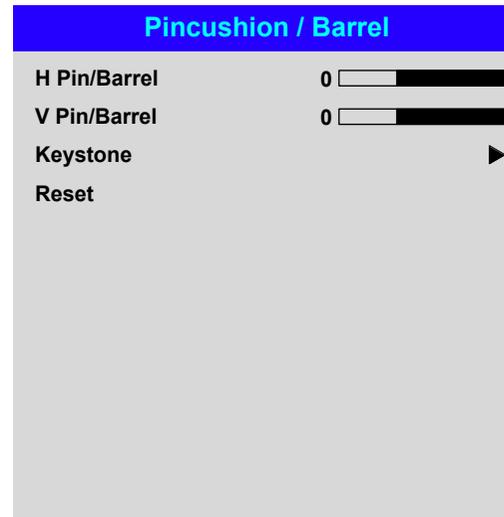

Geometry menu continued from previous page

Pincushion / Barrel

Pincushion or barrel distortions are the result of poor or incorrect tensioning of the screen or using a surface that is not flat.

Use the **Pincushion / Barrel** control to compensate electronically for such distortions.

You can also use this menu to make simple panoramic screen corrections without using external processors.

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Pincushion / Barrel example

The illustration shows pincushion and barrel correction applied both horizontally and vertically, in equal measures.

Pincushion

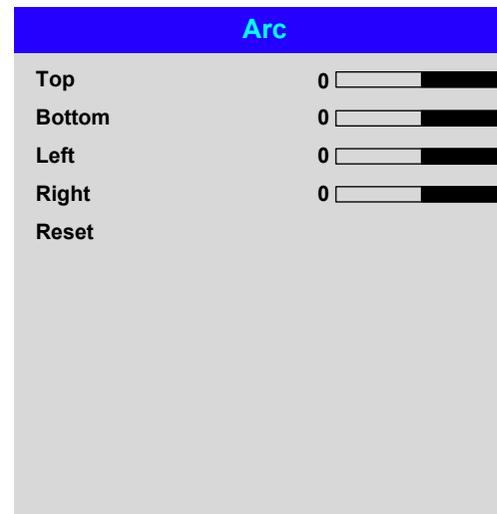

Barrel

Geometry menu continued from previous page

Arc (E-Vision Laser 10K)

This setting is only available on the E-Vision Laser 10K model.

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Edge Blend menu

Use this menu to blend together images from an array of two or more projectors.

The feature feathers the light output of the projector within the edges that overlap with other projectors in the array: as a result, the overlapping edges are evenly lit and easily blend in with the rest of the image.

- **Edge Blend**
Enable and disable **Edge Blend**
- **Align Pattern**
Add markers to the image showing the edges of the blend area and making the overlaps more visible to help adjust the physical position of the projectors in the array.
- **Blend Width**
Determine the width of the blended regions.
- **Black Level Uplift**
Adjust black levels to compensate if the blended regions appear brighter than the rest of the image.
- **Reset**
Reset all **Edge Blend** settings to their factory default values.

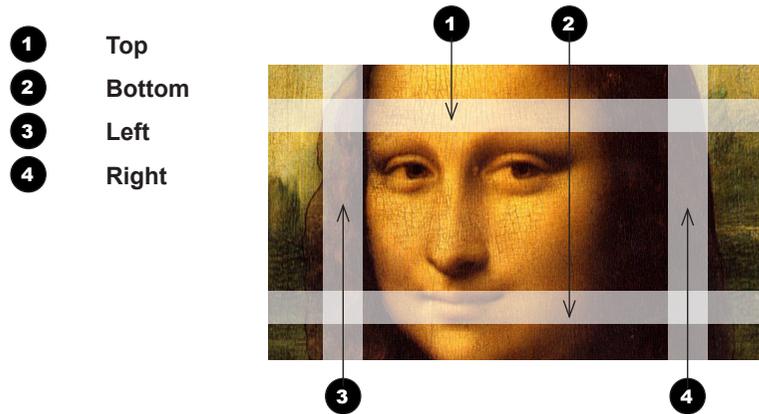

Notes

-  When **Edge Blend** is set to **Off**, all other edge blend settings are disabled.
-  The picture in the blend region needs to be delivered to all overlapping projectors, which may require a special setup of the source.
-  Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Edge Blend menu continued from previous page

Blend Width

Use the **LEFT** ◀ and **RIGHT** ▶ arrow buttons to set the width of the blended regions:

Blend Width	
Top	0
Bottom	0
Left	0
Right	0

Notes

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

Edge Blend menu continued from previous page

Black Level Uplift

Black in the blended regions appears less dark than in the rest of the image. To compensate for this, use this menu to raise the black levels of the rest of the image:

- Set **All** to the required amount of black level correction. This will apply equal correction to the black levels of all colors.
- If necessary, use the individual color sliders (**Red**, **Green** and **Blue**) for fine adjustment.

You may experience artifacts at the edges where the blended region of one projector overlaps the *pond of mirrors* of its neighbor. In the example below, the blended image comes from *two projectors*, **1** and **2**. Both images have black level uplift applied; as a result, *artifacts* **3** and **4** have emerged at the edges where the black level uplift region of one projector overlaps the pond of mirrors of the other.

To remove the artifacts, you need to slightly reduce the size of the black level uplift region of each projector so it does not overlap the pond of mirrors of the other projector.

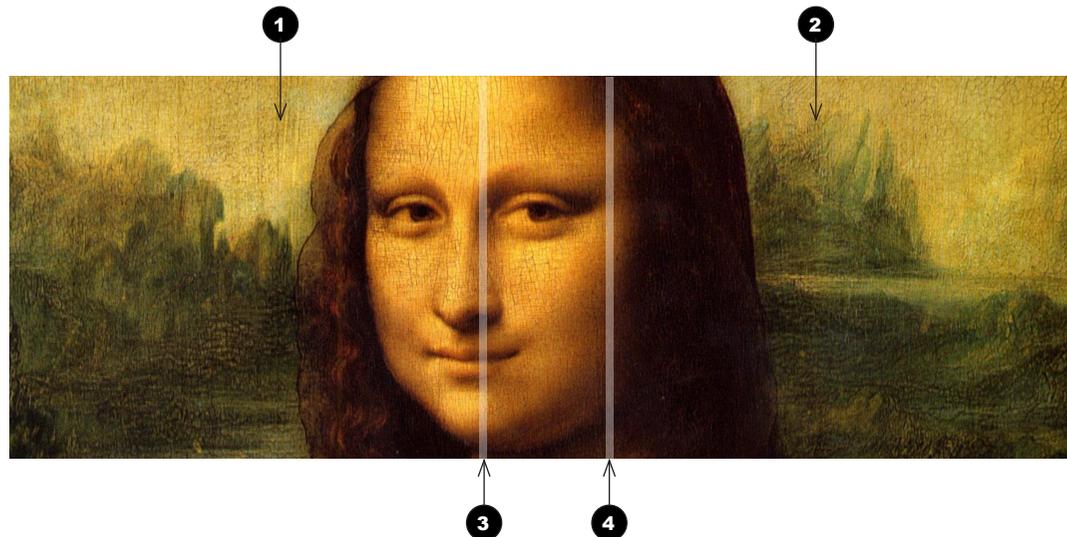

- Depending on your array, use **Top**, **Bottom**, **Left** and/or **Right** to reduce the black level uplift size. In the example below, use the **Right** slider of the *projector on the left* **1** to remove the *artifact on the right* **4**, and the **Left** slider of the *projector on the right* **2** to remove the *artifact on the left* **3**.

Black Level Uplift		
Top	0	
Bottom	0	
Left	0	
Right	0	
All	0	
Red	0	
Green	0	
Blue	0	

Notes

Enable **Align Pattern** from the **Edge Blend** menu to see the black level uplift area.

Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.

3D menu

Use this menu to enable, disable and set up 3D input, as follows:

- **3D Format** — **Off**, **Auto**, **Side by Side (Half)**, **Top and Bottom**, **Dual Pipe** and **Frame Sequential**.
- **DLP Link** — **Off** / **On**.
DLP Link On emits a sync pulse for the 3D glasses via the projected image.
DLP Link Off will send the sync pulse to the sync out connector to use with an external third party emitter.
- **Eye Swap** — **Normal** and **Reverse** (set to **Reverse** if the left- and right-eye images are displayed in the wrong order)
- **Dark Time** — **0.65 ms**, **1.3 ms** and **1.95 ms**. Set to reduce the effect of images overlapping while the glasses are switching.

3D Sync

- **Offset** — use the **LEFT** ◀ and **RIGHT** ▶ arrow buttons to compensate for signal processing delays in the projector.
- **Reference** — **External**, **Internal** and **Auto**.

3D	
3D Format	Auto
DLP Link	Off
Eye Swap	Normal
Dark Time	1.95 ms
3D Sync	
Offset	100
Reference	Internal

Notes

- For further information about supported 3D formats, see [3D connections](#) in the **Connection Guide**.
- If **3D Format** is set to **Off**, all other 3D settings will be unavailable.
- Some settings may be unavailable depending on other settings. For more information, see [Possible Combinations Of Settings](#) further in this guide.
- Frame Sequential** is supported on the HDMI, DVI-D and DisplayPort inputs only.
- 3D video is only possible on the HDMI, HDBaseT, DisplayPort and DVI inputs.
- The **Frame Packing** format is automatically detected by the projector.
- See also [3D types](#) and [Some 3D settings explained](#) further in this guide.

3D menu continued from previous page

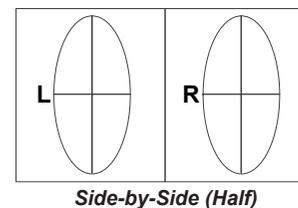

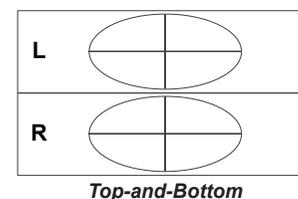

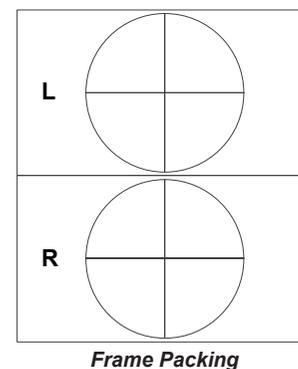

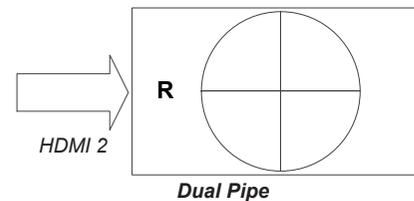

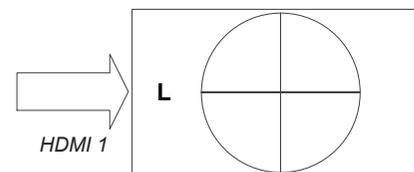

3D types

In most situations you can use the **Auto** setting to have the projector automatically detect the format. Otherwise, consider the notes below to help you set up the 3D input manually.

The following 3D formats are supported:

- Dual Pipe (LEFT and RIGHT)**
 The left and right eye images are delivered on two separate HDMI links, which the projector will interleave for 3D display.
- Frame Packing**
 This format will be detected, re-synchronised, frame-multiplied and displayed at 96 Hz with the left eye / right eye dominance automatically extracted from the video data. You need to optimize **Dark Time** and **Sync Delay** manually to suit your chosen switching glasses.
- Top and Bottom**
 Sets the projector to reformat the video frames and map them to the display with the left eye / right eye dominance automatically extracted from the video data. You need to optimize **Dark Time** and **Sync Delay** manually to suit your chosen switching glasses.
- Side by Side (Half):** interlaced and progressive, 50 and 60Hz
 The side-by-side image will be de-interlaced (if appropriate), resized and then sequentially displayed at 100 or 120 Hz. The left eye / right eye dominance will be automatically extracted from the video data, however you will need to optimize **Dark Time** and **Sync Delay** manually to suit your chosen switching glasses.

Dark Time and **Sync Delay** need to be set only once, to optimize the image for the glasses in use.

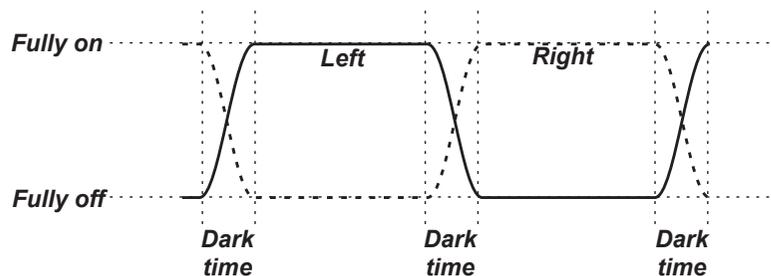

Notes

3D menu continued from previous page

Some 3D settings explained

Dark Time

Ghosting can be caused by the left and right images overlapping during the time that the ZScreen or 3D glasses are switching. **Dark Time** allows you to minimize this effect.

Dominance Left

Dominance Right

Eye Swap

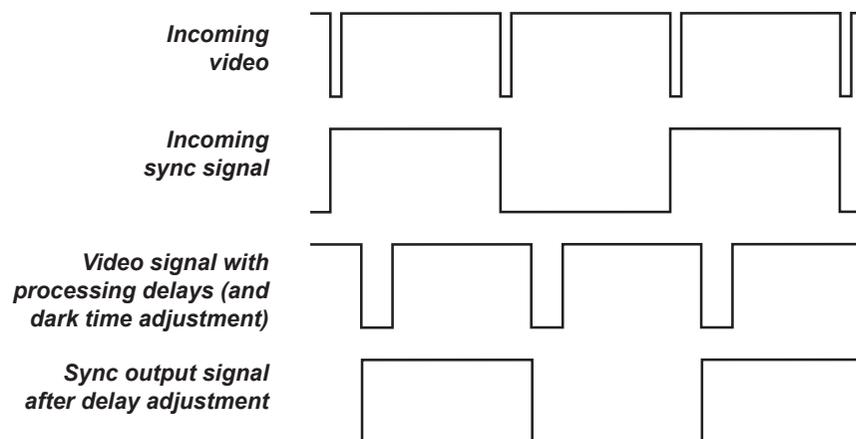

The outgoing 3D frames are in pairs - the dominant frame being presented first. You can determine which frame should be the dominant one.

By convention the default setting is **Left**.

Sync Delay

The sync signal from the 3D server will be in phase with the frames generated by its graphics card. However, to compensate for processing delays in the projector,

Sync Delay introduces a delay to the sync output signal sent to the ZScreen or 3D glasses.

Notes

In order to achieve maximum light output and a smooth grayscale, whilst eliminating ghosting, the following procedure is recommended:

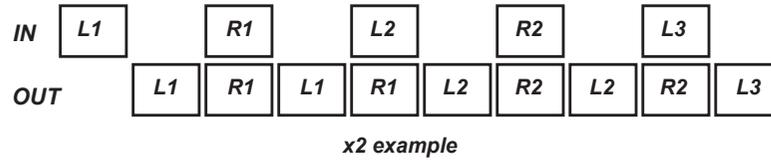

1. Set **Dark Time** to a value appropriate to the glasses or ZScreen, say 1.3 ms or 1.95 ms.
2. Adjust **Sync Offset** time to eliminate ghosting and achieve a smooth grayscale.
3. Repeat steps 1 and 2 until the best result is obtained.

3D menu continued from previous page

Frame rate multiplication in 3D images

When displaying a low frame rate 3D video, the projector multiplies the frame rate to obtain a flicker-free image. For example, a 60Hz frame rate is doubled to 120 Hz, or a 48 Hz frame rate may be doubled to 96Hz or tripled to 144 Hz.

Frame rate multiplication is an automatic process. It occurs in the background and cannot be modified by the user.

Notes

Laser menu

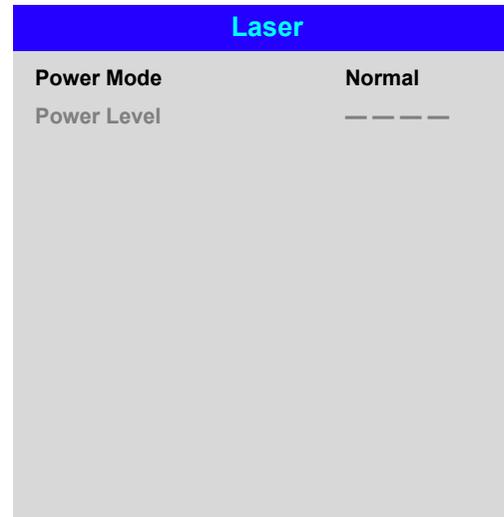

- **Power Mode**

- **Eco** will automatically set the laser power to 80%.
- **Normal** will set the power to 100%.
- Set to **Custom** if you wish to adjust the power manually.

- **Power Level**

This setting is only available if **Power Mode** is set to **Custom**.

Choose a value between 20 and 100, ranging from 20% to 100% laser power.

Notes

Setup menu

- **Orientation**
Choose from **Front Tabletop**, **Front Ceiling**, **Rear Tabletop**, **Rear Ceiling** and **Auto-front**.
- **Cooling Condition**
Choose from **Table**, **Ceiling**, **Freetilt** and **Auto**.
- **High Altitude**
Choose from **On** and **Auto**.
- **Screen Setting**
Choose from **16:10**, **16:9** and **4:3**.
- **ColorMax**
Set up user-defined color gamut values.
- **Power On/Off**
Access the submenu to set up automatic projector power on and power off.
- **Clock Adjust**
Access the submenu to set current date and local time.
- **Startup Logo**
Set this to **On** if you want the DP logo to show when the projector is first switched on.
- **Blank Screen**
Choose from **Logo**, **Black**, **Blue** and **White**.
- **Trigger1** and **Trigger 2**
Choose from **Screen**, **5:4**, **4:3**, **16:10**, **16:9**, **1.88**, **2.35**, **TheaterScope**, **Source**, **Unscaled** or **RS232** to determine what will cause each trigger output to activate.

Highlight the **DOWN ▼** arrow at the bottom of the page and press **ENTER/OK** to navigate to the second **Setup** menu page.

Setup	
Orientation	Auto-front
Cooling Condition	Auto
High Altitude	Auto
Screen Setting	16:10
ColorMax	▶
Power On/Off	▶
Clock Adjust	▶
Startup Logo	On
Blank Screen	Logo
Trigger-1	Off
Trigger-2	Off
▼	

Notes

Auto-front automatically detects the projector's position and sets the orientation accordingly.

Setup menu continued from previous page

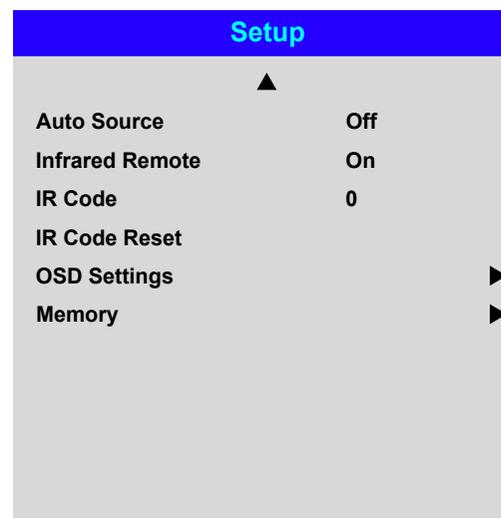

- **Auto Source**
If this setting is **On**, the projector will automatically search for an active input source.
- **Infrared Remote**
Set to **Off** if you wish to disable the remote control.
- **IR Code**
The projector and the remote control need a matching IR code: a two-digit number between **00** and **99**.

The default IR code is **00**. This is also a master code, which, if assigned to a remote, will work regardless of the value assigned to the projector.

To assign an IR code for the projector:
 1. Select **IR Code**.
 2. Use the **UP ▲** and **DOWN ▼** arrow buttons to change the values.**To assign an IR code for the remote:**
 1. Press and hold the **ADDR** button on the remote until the indicator starts flashing.
 2. Release the **ADDR** button and while the indicator is still flashing, enter a two-digit address using the numeric input buttons. The indicator will flash three times quickly to confirm the change.
- **IR Code Reset**
Use this command to unassign an IR code from the projector. This will revert the **IR Code** value to 00.

To unassign an IR code from the remote control,
 - Press and hold **ALT** and **ADDR** simultaneously until the indicator flashes to confirm the change.
- **OSD Settings**
Access this submenu to adjust the appearance and position of the on-screen display.
- **Memory**
Access this submenu to save up to four presets containing custom combinations of image settings, or to recall a saved preset.

Highlight the **UP ▲** arrow at the top of the page and press **ENTER/OK** to go back to the first **Setup** menu page.

**Notes**

If you turn the remote control off, you can only turn it back on again from the control panel or via the **Projector Controller** application.

The **Projector Controller** software is available for download from the [Digital Projection website](#), free of charge.

A wired remote control will also be disabled if **Infrared Remote** is set to **Off**.

Setup menu continued from previous page

ColorMax Setting

ColorMax Setting permits seven point color matching of red, green, blue, yellow, cyan, magenta and white.

You can enter your own gamut values here, or edit values you have imported using the **Projector Controller** software.

Defining your own colorspace with individual x and y coordinates for each color enables you to match not only the whites but each individual color as well.

Highlight the submenu you wish to open and press **ENTER/OK** to confirm your choice.

Measured Data / Target Data

1. Use the **UP ▲** and **DOWN ▼** arrow buttons to highlight a color, then use the **LEFT ◀** and **RIGHT ▶** arrow buttons to navigate to the **x** or **y** coordinate.
2. Use the **UP ▲** and **DOWN ▼** arrow buttons to increase and decrease the value, respectively.
3. Exit edit mode:
 - press **ENTER/OK**, if you want to save the edited values.
 - press **EXIT**, if you do not wish to save the edited values
4. If necessary, highlight another color and repeat the procedure.

ColorMax Setting	
Measured Data	▶
Target Data – User 1	▶
Target Data – User 2	▶
Reset	

Measured Data		
Red	x: 0.658	y: 0.339
Green	x: 0.315	y: 0.662
Blue	x: 0.146	y: 0.043
White	x: 0.276	y: 0.283

Target Data – User 1		
Red	x: 0.640	y: 0.390
Green	x: 0.300	y: 0.600
Blue	x: 0.150	y: 0.060
Yellow	x: 0.419	y: 0.505
Cyan	x: 0.225	y: 0.329
Magenta	x: 0.321	y: 0.154
White	x: 0.285	y: 0.302

Notes

 The **Projector Controller** software is available for download from the **Digital Projection** website, free of charge.

 This tool is best used in conjunction with a specialized light meter (a photo spectrometer) to measure color parameters within a particular installation. However, the preloaded generic factory default data set is designed to give more than satisfactory results.

Setup menu continued from previous page

Power On/Off

• **Auto Power Off**

Set this to On if you want the projector to go into STANDBY mode when no input source is detected for 20 minutes.

• **Auto Power On**

Set this to **On** if you want the projector to start up immediately when the mains is connected.

Set this to **Off** if you want the projector to go into STANDBY mode when the mains is connected. In this case, the projector will not start up until the **POWER** button is pressed on the control panel or the **ON** button is pressed on the remote control.

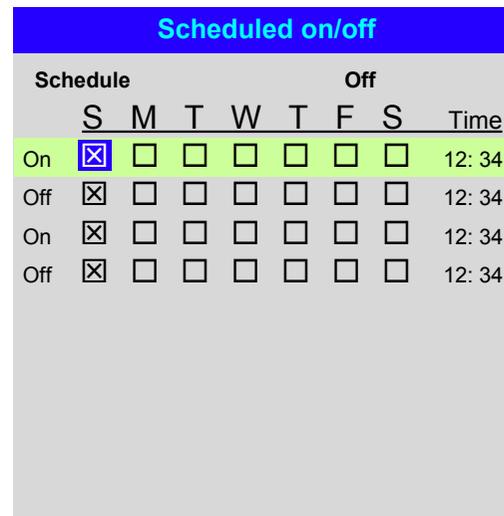

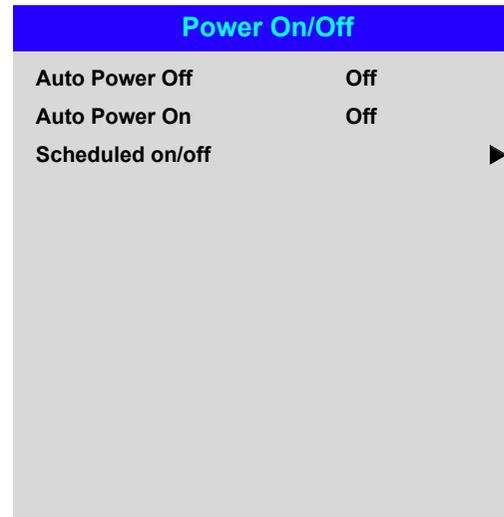

• **Scheduled on/off**

Access this submenu to create a weekly schedule for automatic on and off times:

1. Set a schedule:

- Use the **UP ▲** and **DOWN ▼** arrow buttons to highlight a row, then press **ENTER/OK** to enable edit mode.
- Within a row, navigate with the **LEFT ◀** and **RIGHT ▶** arrow buttons. Set values with the **UP ▲** and **DOWN ▼** arrow buttons.
- To exit edit mode, press **ENTER/OK**. Alternatively, press **EXIT** if you don't want the changes to take effect. Move to another row using the **UP ▲** and **DOWN ▼** arrow buttons.

2. To enable the schedule, set **Schedule** to **On**.

Notes

Setup menu continued from previous page

Clock Adjust

Use this menu to set date (in **dd:MM:yyyy** format), time (in **HH:mm** format) and time zone.

The date and time set here will affect any schedule created within the **Power On/Off** menu.

Clock Adjust	
Date (dd:MM:yyyy)	20:11:2015
Time (HH:mm)	14:00
Time Zone	UTC 0

Notes

Setup menu continued from previous page

OSD Settings

- **Language** sets the OSD language.
- **Menu Position** determines where the OSD should appear on the screen when activated.
- **Menu Transparency** sets OSD transparency between **0%** (no transparency), **25%**, **50%** and **75%**.
- **Time Out** determines how long the OSD should remain on screen if no buttons are pressed. Choose **Always On** to disable this feature.
- **Message Box** determines whether projector status messages should appear on the screen.

Memory

The current image settings can be saved as a preset, which you can recall later. The default settings can be recalled at any time as well.

Up to four custom presets can be stored for each input.

The following settings are saved in a preset:

- From the **Image** menu — **Gamma, Brightness, Contrast, Saturation, Hue, Sharpness** and **Noise Reduction**
- From the **Color** menu — **Color Space, Color Mode, ColorMax, Color Temperature, Dynamic Black, RGB Lift** and **RGB Gain**
- From the **Geometry** menu — **Aspect Ratio** and **Overscan**

To recall a saved preset:

- Select **Recall Memory** and press **ENTER/OK**, then select a preset from **Preset A** to **Preset D**. Select **Default** to load factory default values.

To save a preset:

- Select **Save Settings** and press **ENTER/OK**, then choose from **Preset A, Preset B, Preset C** and **Preset D**.

OSD Settings	
Language	English
Menu Position	Center
Menu Transparency	0
Time Out	30 Seconds
Message Box	On

Memory	
Recall Memory	Default
Save Settings	Preset A

Notes

 Presets from one input cannot be applied to another input.

Network menu

- **Network Mode**

Choose between **Projector Control** and **Service**.

- **Standby Power**

If this setting is **On**, the LAN socket remains active when the projector is in STANDBY mode. If the setting is **Off**, the LAN socket is disabled when the projector is in STANDBY mode.

- **DHCP, IP, Subnet Mask, Gateway, DNS**

Set **DHCP** to **On** if the IP address is to be assigned by a DHCP server, or **Off** if it is to be set here.

If **DHCP** is **On**, it will not be possible to edit **IP Address, Subnet Mask, Gateway** or **DNS**.

If **DHCP** is set to **Off**, edit **IP Address, Subnet Mask, Gateway** and **DNS** as required.

- **MAC**

This field is read-only.

- **AMX**

Switch on or off.

Network	
Network Mode	Projector Control
Standby Power	Off
DHCP	Off
IP	192 . 168 . 000 . 100
Subnet Mask	255 . 255 . 255 . 000
Gateway	000 . 000 . 000 . 000

The DMD™

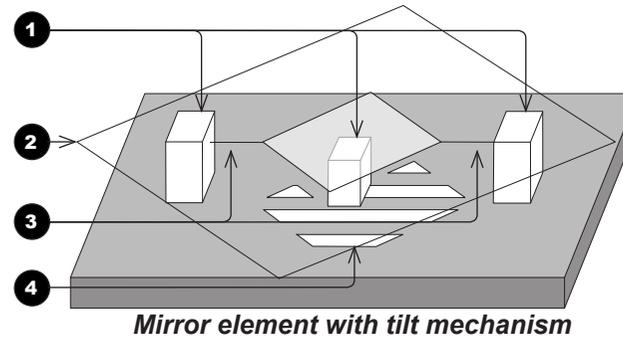

A DMD™ (Digital Micromirror Device™) is a true digital light modulator which utilises an array of up to 2.3 million moving aluminium mirrors, with each one representing a pixel in the final projected image. The outermost micromirrors in the array remain inactive (*pond of mirrors*) and are not used in constructing the image.

- 1 Casing
- 2 Light shield
- 3 Pond of mirrors
- 4 Array

Each mirror element is suspended over address electrodes by a torsion hinge between two posts.

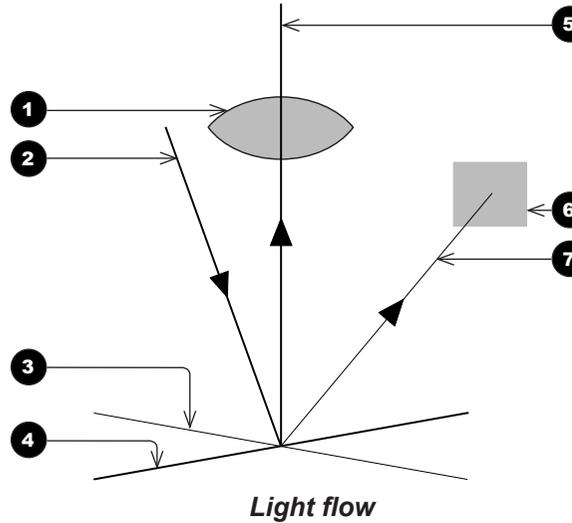

- 1 Support posts
- 2 Mirror element
- 3 Torsion hinges
- 4 Offset address electrode

Notes

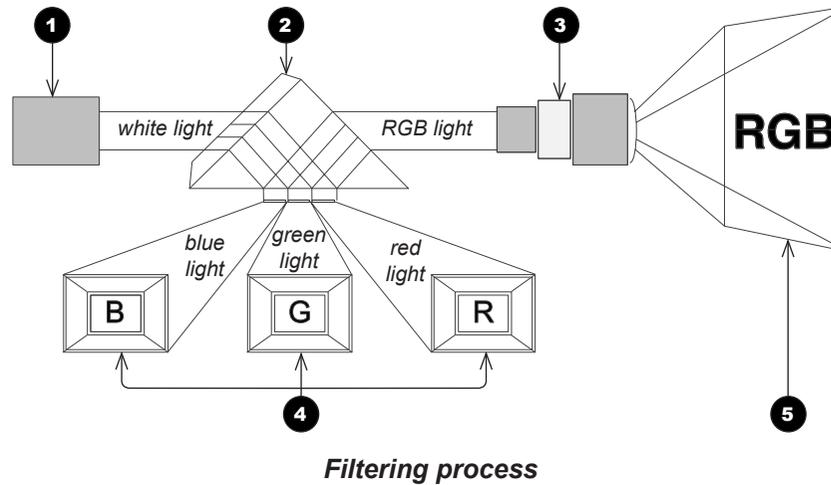

Depending on the voltage polarity applied, each mirror will either tilt to the left to produce a bright pixel or to the right for a dark pixel. When light is applied to the complete DMD™, only the light redirected from a mirror tilting to the left is projected.

- 1 Projection lens
- 2 Incoming light from the illumination module
- 3 Mirror element tilted to the right
- 4 Mirror element tilted to the left
- 5 Reflected light, left tilt
- 6 Light dump
- 7 Reflected light, right tilt

The projector optically filters white light from the illumination module into its constituent red, green and blue. Each color illuminates a separate DMD™ whose modulated output is then recombined with the other two to form the projected full color image.

- 1 Illumination module
- 2 Optical filtering of light into red, green and blue
- 3 Projection lens
- 4 DMD™ devices
- 5 Full color image displayed on screen

Notes

Choosing A Lens

A number of lenses are available. Which lens you choose depends on the screen size, image aspect ratio, throw distance and light output.

The following table shows all available lenses in order of their **throw ratios**:

Throw ratios	Focus range	Lens shift
0.38 : 1 fixed (UST)	0.82 m - 2.71 m	none
0.75 - 0.93 : 1 zoom	1.02 m - 12.7 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
0.76 : 1 fixed	0.81 m - 5.08 m	none
1.25 - 1.79 : 1 zoom	1.33 m - 11.73 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
1.73 - 2.27 : 1 zoom	1.83 m - 14.9 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
2.22 - 3.67 : 1 zoom	2.36 m - 24.2 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
3.58 - 5.38 : 1 zoom	3.8 m - 35.35 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
5.31 - 8.26 : 1 zoom	5.59 m - 54.8 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame

To choose a lens, calculate the **throw ratio** required.

Notes

 Throw distance calculations are based on the distance from the outer end of the lens, which will vary from lens to lens.

The distance between the front of the projector chassis and the outer end of the lens is called **lens extension**. Lens extensions is measured when the lens is focused at infinity, and fully extended.

 Refer to the projector CAD drawings for individual lens extension figures.

 The **0.38 : 1 fixed lens** has no adjustable shift value. However, the lens has an inherent offset depending on image size. See the UST documentation published separately on the Digital Projection website.

 The **0.75 - 0.93 : 1 zoom lens** has an additional feature permitting barrel correction for curved screens. The front ring of the lens is a manual control which provides focus curvature adjustment to correct for the different focal distances between center and corner.

 For information about individual lens part numbers, see [Appendix A](#) at the end of this document.

Basic calculation

Identify the required lens by calculating the **throw ratio**.

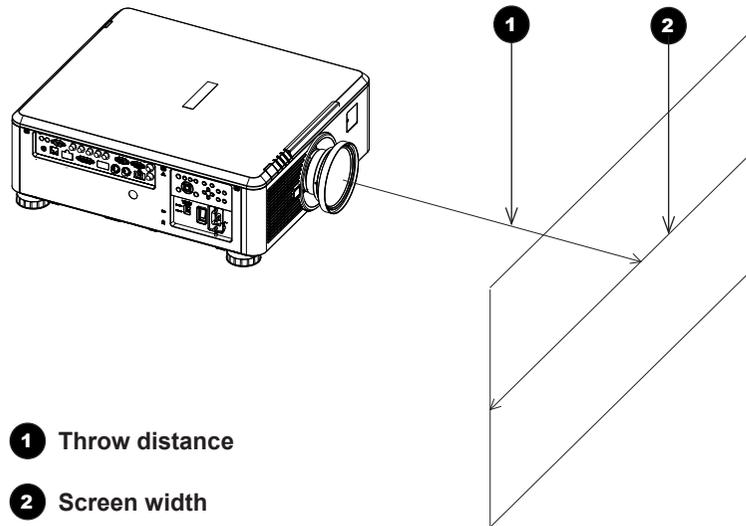

A **throw ratio** is the ratio of the throw distance to the screen width:

$$\text{Throw ratio} = \frac{\text{Throw distance}}{\text{Screen width}}$$

1. Use the formula above to obtain the required throw ratio.
2. Match the throw ratio with a lens from the table below:

Throw ratios	Focus range
0.38 : 1 fixed (UST)	0.82 m - 2.71 m
0.75 - 0.93 : 1 zoom	1.02 m - 12.7 m
0.76 : 1 fixed	0.81 m - 5.08 m
1.25 - 1.79 : 1 zoom	1.33 m - 11.73 m
1.73 - 2.27 : 1 zoom	1.83 m - 14.9 m
2.22 - 3.67 : 1 zoom	2.36 m - 24.2 m
3.58 - 5.38 : 1 zoom	3.8 m - 35.35 m
5.31 - 8.26 : 1 zoom	5.59 m - 54.8 m

3. Ensure the required throw distance is within the range covered by the lens.

Notes

- The basic calculation on this page does not take into consideration DMD™ and image size, which could affect the throw ratio. For a more complex and realistic calculation, see [Full lens calculation](#) in this section.
- When calculating the throw ratio, be sure to use identical measurement units for both the throw distance and the screen width.
- For information about individual lens part numbers, see [Appendix A](#) at the end of this document.

Basic calculation example

1. Calculate the throw ratio using the formula.

Your screen is **4.5 m** wide and you wish to place the projector approximately **11 m** from the screen. The throw ratio will then be

$$\frac{11}{4.5} = 2.44$$

2. Match the result with the lens table.

The lens matching a throw ratio of 2.44 is **the 2.22 - 3.67 : 1 zoom lens**.

3. Check whether the lens covers the required throw distance.

The focus range quoted for the 2.22 - 3.67 : 1 zoom lens is **2.36 - 24.2 m**. The required distance of 11 m is within the range.

INFORMATION YOU NEED FOR THIS CALCULATION

- The throw ratio formula:

$$\text{Throw ratio} = \frac{\text{Throw distance}}{\text{Screen width}}$$

- The lens table:

Throw ratios	Focus range
0.38 : 1 fixed (UST)	0.82 m - 2.71 m
0.75 - 0.93 : 1 zoom	1.02 m - 12.7 m
0.76 : 1 fixed	0.81 m - 5.08 m
1.25 - 1.79 : 1 zoom	1.33 m - 11.73 m
1.73 - 2.27 : 1 zoom	1.83 m - 14.9 m
2.22 - 3.67 : 1 zoom	2.36 m - 24.2 m
3.58 - 5.38 : 1 zoom	3.8 m - 35.35 m
5.31 - 8.26 : 1 zoom	5.59 m - 54.8 m

Notes

The basic calculation on this page does not take into consideration DMD™ and image size, which could affect the throw ratio. For a more complex and realistic calculation, see [Full lens calculation](#) in this section.

For information about individual lens part numbers, see [Appendix A](#) at the end of this document.

Full lens calculation

Introducing TRC

The choice of lens will affect the image size and will address discrepancies between the DMD™ resolution and the source.

When an image fills the height of the DMD™ but not the width, it uses less than 100% of the DMD™ surface. A lens chosen using the basic formula may produce an image that is considerably smaller than the actual screen.

To compensate for loss of screen space in such situations, you need to increase the throw ratio using a **Throw Ratio Correction (TRC)**.

Example

Fig. 1 illustrates a 4:3 image within a WUXGA DMD™.

When a WUXGA projector is used for a 4:3 image, the image does not fill the width of the DMD™, creating a **pillarboxing** effect - blank spaces to the left and right.

Fig. 2 shows the same image projected on a 4:3 screen using a standard lens (chosen with the basic calculation).

The DMD™ accurately fills the width of the screen; however, the pillarboxing is now part of the projected image and is transferred to the screen.

The DMD™ does not fill the height of the screen, which has caused **letterboxing** - further blank spaces at the top and bottom of the screen.

The image is now surrounded by blank space, which can be removed if the throw ratio is increased.

Fig. 3 shows the image projected on the same screen with a lens chosen using TRC.

The increased throw ratio has allowed the 4:3 image to fill the 4:3 screen seamlessly.

Fig. 1

Fig. 2

Fig. 3

Notes

 TRC can only be applied if greater than 1. If TRC is 1 or less, disregard it and calculate the throw ratio using the basic formula.

Calculating TRC

To calculate TRC, use the following formula:

$$TRC = \frac{1.6 \text{ (DMD™ aspect ratio)}}{\text{Source aspect ratio}}$$

TRC table

Alternatively, you can save time by referencing the following table, which shows the TRC value for some popular image formats:

2.35:1 (Scope) , 1920 x 817 pixels	TRC < 1, not used
1.85:1 (Flat) , 1920 x 1037 pixels	TRC < 1, not used
1.78:1 (16:9) , 1920 x 1080	TRC < 1, not used
1.66:1 (Vista) , 1792 x 1080 pixels	TRC < 1, not used
1.6:1 (16:10) , 1728 x 1080 pixels	TRC = 1, not used (native resolution)
1.33:1 (4:3) , 1440 x 1080 pixels	TRC = 1.2
1.25:1 (5:4) , 1350 x 1080 pixels	TRC = 1.28

Notes

TRC can only be applied if greater than 1. If TRC is 1 or less, disregard it and calculate the throw ratio using the basic formula.

Calculating the throw ratio with TRC

- For TRC > 1, amend the basic throw ratio formula as follows:

$$\text{Throw ratio} = \frac{\text{Throw distance}}{\text{Screen width} \times \text{TRC}}$$

- Once a throw ratio is established, identify the matching lens from the table:

Throw ratios	Focus range
0.38 : 1 fixed (UST)	0.82 m - 2.71 m
0.75 - 0.93 : 1 zoom	1.02 m - 12.7 m
0.76 : 1 fixed	0.81 m - 5.08 m
1.25 - 1.79 : 1 zoom	1.33 m - 11.73 m
1.73 - 2.27 : 1 zoom	1.83 m - 14.9 m
2.22 - 3.67 : 1 zoom	2.36 m - 24.2 m
3.58 - 5.38 : 1 zoom	3.8 m - 35.35 m
5.31 - 8.26 : 1 zoom	5.59 m - 54.8 m

- Ensure the required throw distance is within the range of the matching lens.

Notes

TRC can only be applied if greater than 1. If TRC is 1 or less, disregard it and calculate the throw ratio using the basic formula.

Full lens calculation example

Your screen is **4.5 m** wide; you wish to place the projector approximately **11 m** from the screen. The source is **4:3**.

1. Calculate TRC as follows:

$$TRC = \frac{1.6}{1.33} = 1.2$$

2. Calculate the throw ratio:

$$Throw\ ratio = \frac{11}{4.5 \times 1.2} = 2.04$$

3. Find a match in the lens table.

The table shows that the matching lens is **the 1.72 - 2.27 : 1 zoom lens**.

4. Check whether the lens covers the required throw distance.

The focus range quoted for the 1.72 - 2.27 : 1 zoom lens is **1.83 - 14.9 m**. The required distance of 11 m is within the range.

INFORMATION YOU NEED FOR THESE CALCULATIONS

- The TRC formula $TRC = \frac{DMD^{TM}\ aspect\ ratio}{Source\ aspect\ ratio}$

- The TRC table (to use instead of the formula)

2.35:1 (Scope)	TRC not used
1.85:1 (Flat)	TRC not used
1.78:1 (16:9)	TRC not used
1.66:1 (Vista)	TRC not used
1.6:1 (16:10)	TRC not used (native resolution)
1.33:1 (4:3)	TRC = 1.2
1.25:1 (5:4)	TRC = 1.28

- The throw ratio formula $Throw\ ratio = \frac{Throw\ distance}{Screen\ width \times TRC}$

- The lens table:

Throw ratios	Focus range
0.38 : 1 fixed (UST)	0.82 m - 2.71 m
0.75 - 0.93 : 1 zoom	1.02 m - 12.7 m
0.76 : 1 fixed	0.81 m - 5.08 m
1.25 - 1.79 : 1 zoom	1.33 m - 11.73 m
1.73 - 2.27 : 1 zoom	1.83 m - 14.9 m
2.22 - 3.67 : 1 zoom	2.36 m - 24.2 m
3.58 - 5.38 : 1 zoom	3.8 m - 35.35 m
5.31 - 8.26 : 1 zoom	5.59 m - 54.8 m

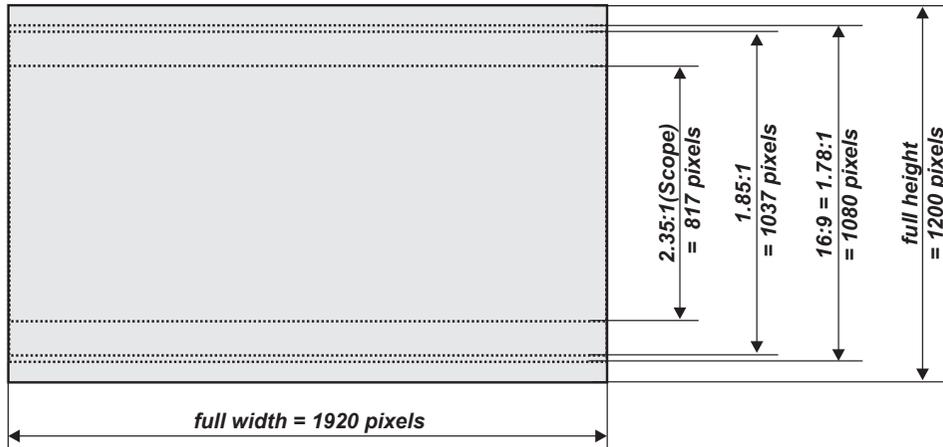

Notes

Screen Requirements

Fitting the image to the DMD™

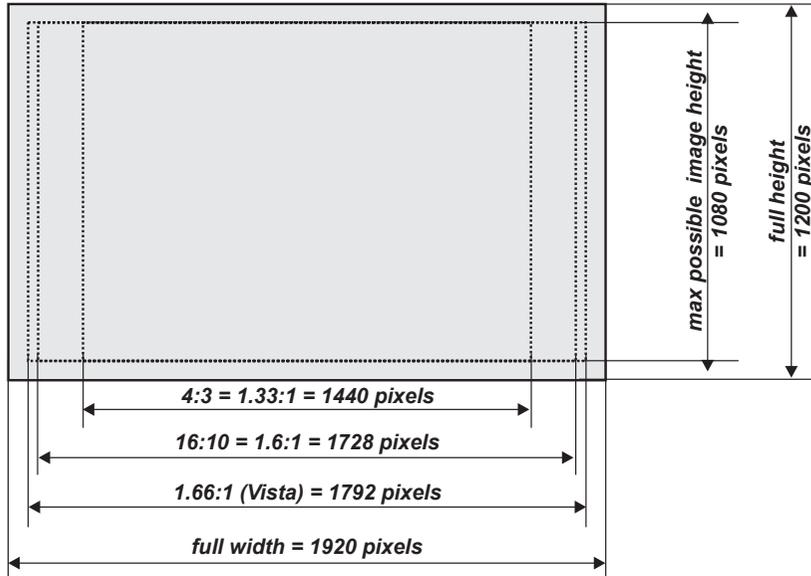

If the source image supplied to the projector is smaller than the DMD™ resolution, the image will not fill the DMD™. The following examples show how a number of common formats may be displayed, depending on your DMD™ resolution.

WUXGA images displayed full width

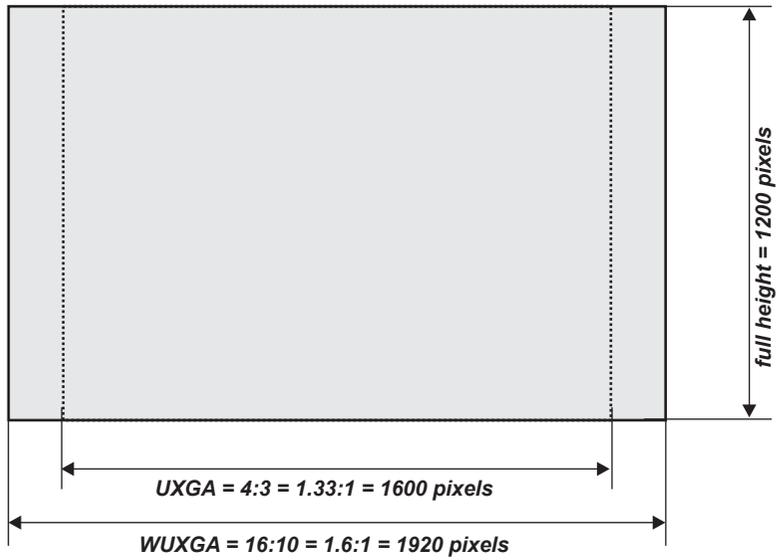

Notes

WUXGA images displayed with a height of 1080 pixels

Notes

WUXGA images displayed full height

Notes

 Only WUXGA or UXGA images can fill the full height of the DMD™, using all 1200 pixels without scaling.

Diagonal screen sizes

Screen sizes are sometimes specified by their diagonal size (D). When dealing with large screens and projection distances at different aspect ratios, it is more convenient to measure screen width (W) and height (H).

The example calculations below show how to convert diagonal sizes into width and height, at various aspect ratios.

2.35:1 (Scope)

$W = D \times 0.92$ $H = D \times 0.39$

1.85:1

$W = D \times 0.88$ $H = D \times 0.47$

16:9 = 1.78:1

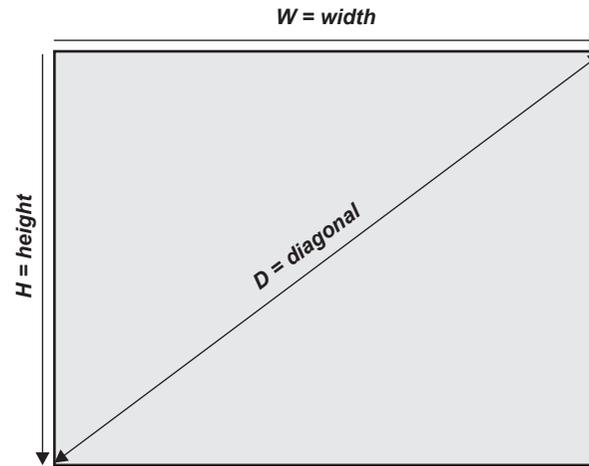

$W = D \times 0.87$ $H = D \times 0.49$

1.66:1 (Vista)

$W = D \times 0.86$ $H = D \times 0.52$

16:10 = 1.6:1 (native aspect ratio for WUXGA projectors)

$W = D \times 0.85$ $H = D \times 0.53$

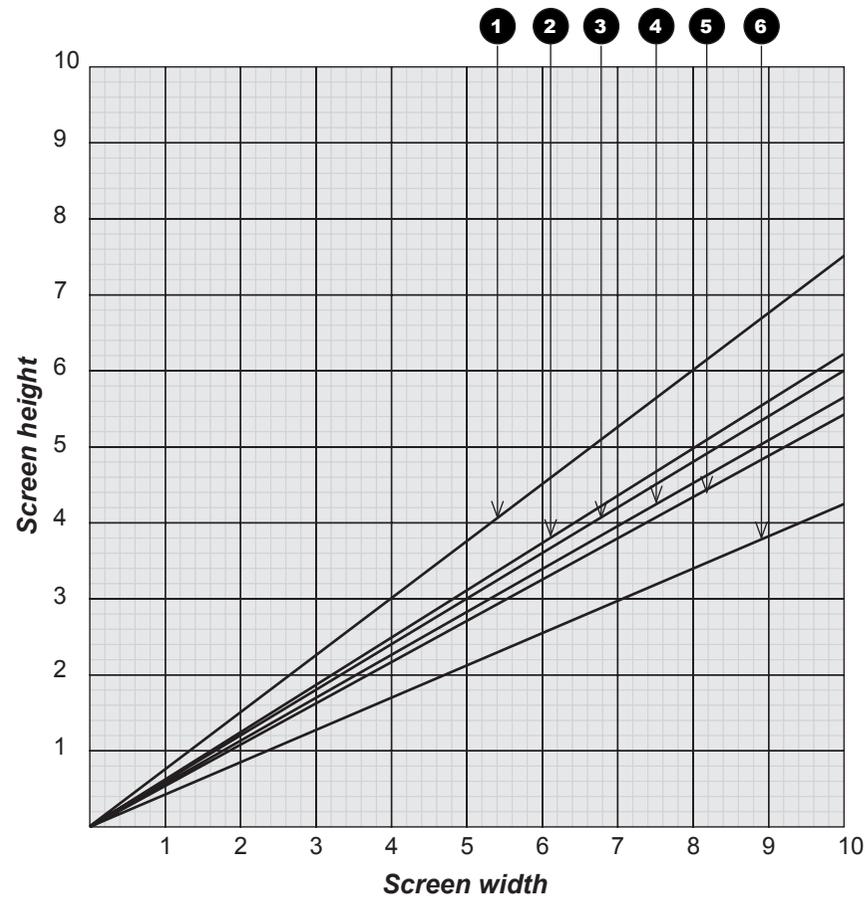

Notes

Fitting the image to the screen

It is important that your screen is of sufficient height and width to display images at all the aspect ratios you are planning to use.

Use the conversion chart to check that you are able to display the full image on your screen. If you have insufficient height or width, you will have to reduce the overall image size in order to display the full image on your screen.

- 1 4:3 = 1.33:1**
W = H x 1.33, H = W x 0.75
- 2 16:10 = 1.6:1**
(native aspect ratio for WUXGA projectors)
W = H x 1.6, H = W x 0.625
- 3 1.66:1 (Vista)**
W = H x 1.66, H = W x 0.6
- 4 16:9 = 1.78:1**
W = H x 1.78, H = W x 0.56
- 5 1.85:1 (Flat)**
W = H x 1.85, H = W x 0.54
- 6 2.35:1 (Scope)**
W = H x 2.35, H = W x 0.426

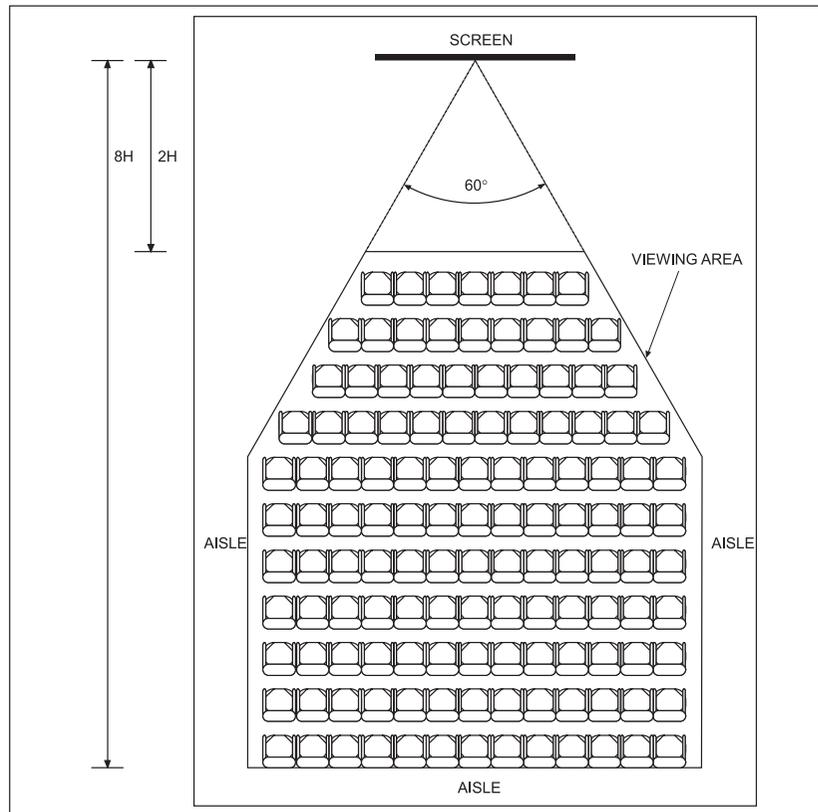

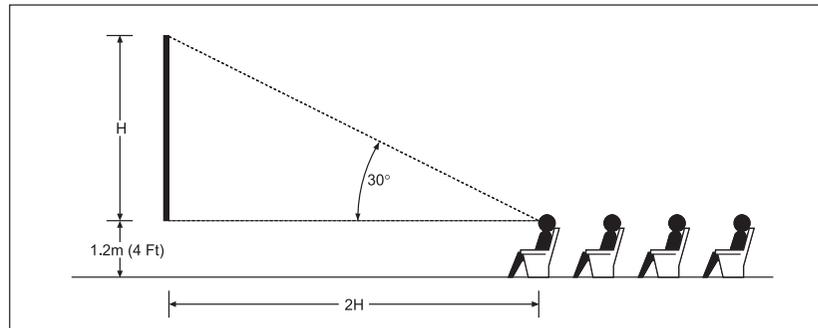

Notes

Positioning the screen and projector

For optimum viewing, the screen should be a flat surface perpendicular to the floor. The bottom of the screen should be 1.2 m (4 feet) above the floor and the front row of the audience should not have to look up more than 30° to see the top of the screen.

The distance between the front row of the audience and the screen should be at least twice the screen height and the distance between the back row and the screen should be a maximum of 8 times the screen height. The screen viewing area should be within a 60° range from the face of the screen.

Notes

The projector should be installed as close to the power outlet as possible.

The power connection should be easily accessible, so that it can be disconnected in an emergency.

Ensure that there is at least 30 cm (12 in) of space between the ventilation outlets and any wall, and 10 cm (4 in) on all other sides.

Do not install the projector close to anything that might be affected by its operational heat, for instance, polystyrene ceiling tiles, curtains etc.

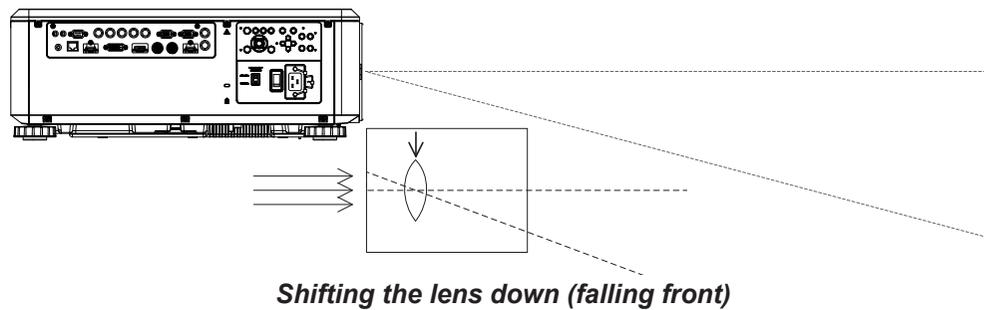

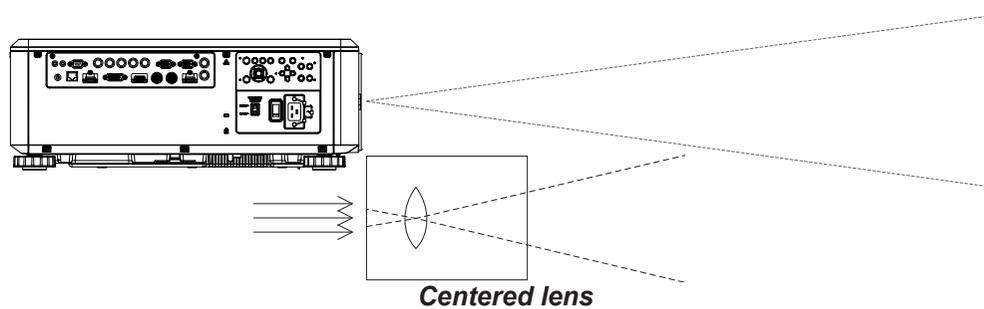

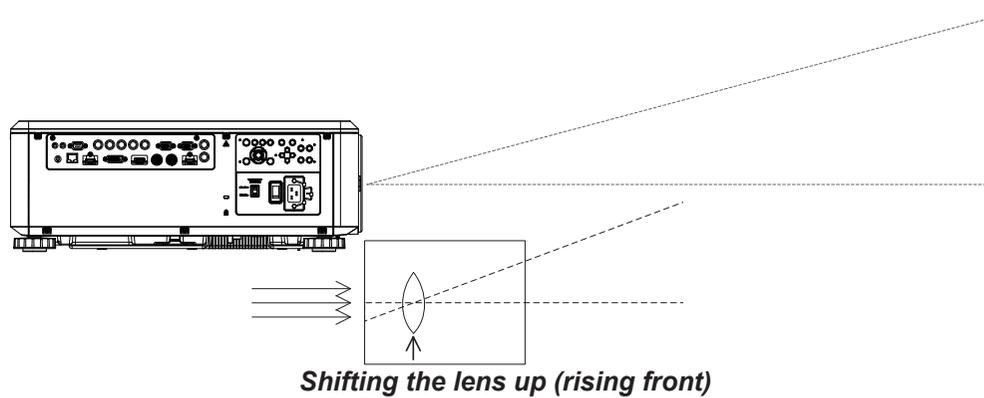

The image can be flipped for rear projection (see [Setup menu](#) in the **Operating Guide**) and displayed without the need for extra mirrors or equipment.

However, you must ensure that there is sufficient distance behind the screen for the projector to be correctly located.

Rear installation is generally more complicated and advice should be sought from your local dealer before attempting it.

Positioning The Image

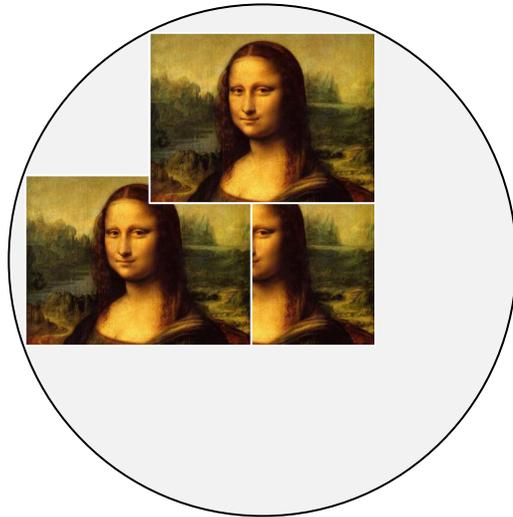

The normal position for the projector is at the centre of the screen. However, you can set the projector above or below the centre, or to one side, and adjust the image using the **Lens shift** feature (known as **rising and falling front**) to maintain a geometrically correct image.

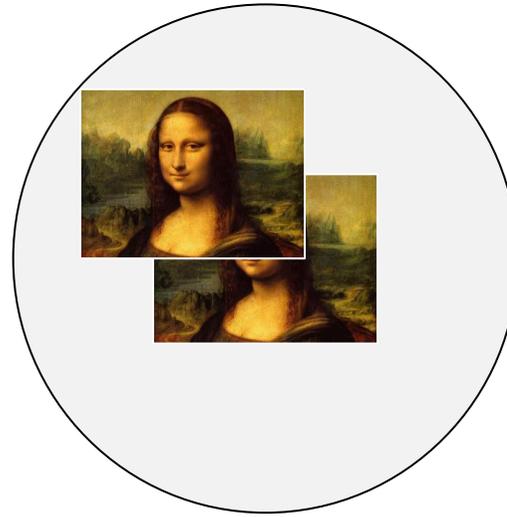

Notes

Any single adjustment outside the ranges specified on the following page may result in an unacceptable level of distortion, particularly at the corners of the image, due to the image passing through the periphery of the lens optics.

If the lens is to be shifted in two directions combined, the maximum range without distortion will be somewhat less, as can be seen in the illustrations below.

Full horizontal or vertical shift

Combined shift is reduced

Notes

Frame Rates And Pulldowns Explained

Interlaced and progressive scan

A **progressive scan** is a method of updating the image by drawing all the lines of each frame in a sequence. In contrast, **interlaced video** alternately scans odd and even lines. In old analog TV interlacing was commonly used as a way of doubling the refresh rate without consuming extra bandwidth.

The following artifacts are common with interlaced video:

- edge tear (combing)

The image lands between two fields and blurs. This is commonly observed when viewing rapid lateral movement.

- aliasing (stair-stepping)

The texture of the image becomes populated with unrealistic patterns. Aliasing occurs because of differences between the original frame rate and the destination format.

- twitter

The image shimmers, for example when showing rolling credits. This happens when the image contains thin horizontal lines that only appear in one field.

Frame rates of image sources

Original analog films are made at 24 fps and the whole frame is projected at once. To eliminate flicker and create an impression of continuous movement, the projector blades divide the images so that the viewer sees 48 frames per second.

Interlaced video scans odd lines, then even. Two fields are blended into one image. NTSC video (60i) is 29.97 fps, or 59.94 fields per second.

24p video is progressive but without the benefit of projector blades dividing the images, so it looks jumpier on playback than film. 24p is the optimal format for projects that are finished on film.

30p is optimal for projects finished on video. It has fewer strobing issues than 24p in video playback.

Notes

Pulldowns - conversion into destination formats

Pulldowns are a method of converting a 24p source into a different destination format by adding extra frames to the source.

2:3 (normal) pulldown

This method is used to convert a 24p source (film) into a 60i destination (NTSC video) by adding two extra fields for every four frames, effectively increasing the frame rate to 30 fps. The frame is split into fields and then two fields are repeated for every four original frames as shown in the illustration below.

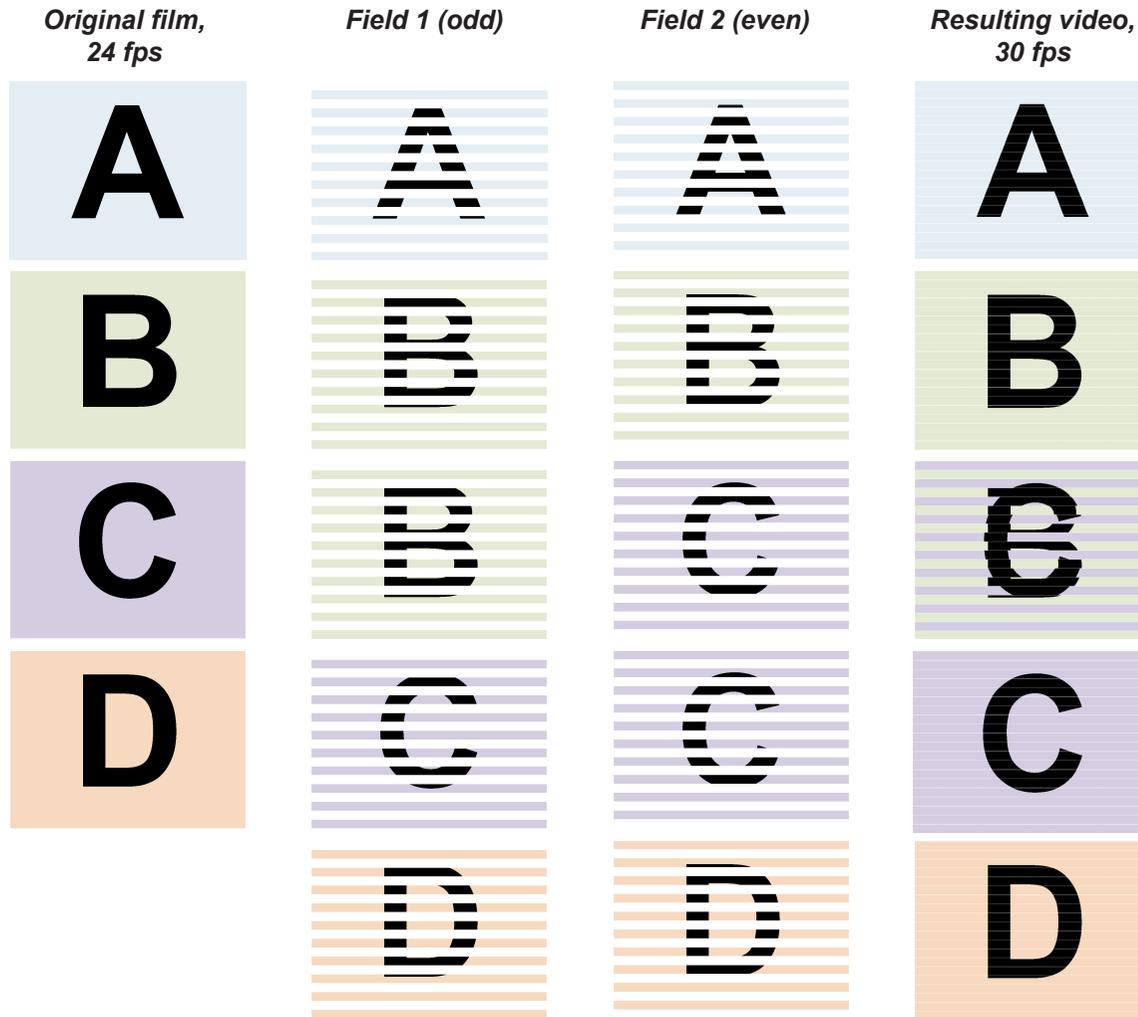

Notes

2:3:3:2 (advanced) pulldown

This method is very similar to the normal pulldown. Unlike the normal pulldown method, the resulting 30 fps video sequence contains only one frame containing fields from two different source frames.

The advantage of this method is that it is easier to reverse, if necessary.

Notes

The projector will use advanced pulldown on suitable video material, wherever possible.

Appendix A: Lens Part Numbers

Throw ratios	Part number	Focus range	Lens shift
0.38 : 1 fixed (UST)	117-341	0.82 m - 2.71 m	none
0.75 - 0.93 : 1 zoom*	115-339	1.02 m - 12.7 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
0.76 : 1 fixed	112-499	0.81 m - 5.08 m	none
1.25 - 1.79 : 1 zoom	112-500	1.33 m - 11.73 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
1.73 - 2.27 : 1 zoom	112-501	1.83 m - 14.9 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
2.22 - 3.67 : 1 zoom	112-502	2.36 m - 24.2 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
3.58 - 5.38 : 1 zoom	112-503	3.8 m - 35.35 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame
5.31 - 8.26 : 1 zoom	112-504	5.59 m - 54.8 m	V: 0.5 (U) 0 (D) frame H: 0.1 (L) 0.1 (R) frame

Notes

 Throw distance calculations are based on the distance from the outer end of the lens, which will vary from lens to lens.

The distance between the front of the projector chassis and the outer end of the lens is called **lens extension**. Lens extensions is measured when the lens is focused at infinity, and fully extended.

 Refer to the projector CAD drawings for individual lens extension figures.

 The **0.38 : 1 fixed lens** has no adjustable shift value. However, the lens has an inherent offset depending on image size. See the UST documentation published separately on the Digital Projection website.

 The **0.75 - 0.93 : 1 zoom lens** has an additional feature permitting barrel correction for curved screens. The front ring of the lens is a manual control which provides focus curvature adjustment to correct for the different focal distances between center and corner.

Trigger 1 & Trigger 2

3.5 mm mini jack

Tip Trigger
Ring Not connected
Sleeve Ground

Output: 12V, 200 mA max

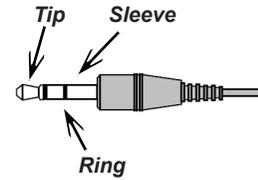

Wired remote control

3.5 mm mini jack

Tip 3V output
Ring Signal
Sleeve Ground

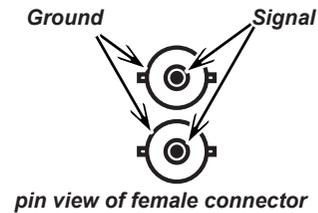

Output: 2.85-3.15V, Max. 500 mA

3D Sync IN and 3D Sync OUT

75 ohm BNC

Max input / output voltage: 5.5V

Notes

Appendix D: Glossary Of Terms

1080p

An [HDTV resolution](#) which corresponds to 1920 x 1080 [pixels](#) (a widescreen [aspect ratio](#) of 16:9).

3D active glasses

Wireless battery-powered glasses with LCD shutters. Synchronization information is communicated to the glasses by means of an infrared (IR) or radio frequency (RF) emitter which is connected to the Sync Out terminal on the projector. IR or RF pulses are transmitted by the emitter to signal when the left eye and right eye images are being displayed. The glasses incorporate a sensor which detects the emitter's signal and synchronises the left and right eye shutters with the projected image.

3D passive glasses

Passive glasses do not require a power source to work. Light with left-hand polarisation can pass through the left lens and light with right-hand polarisation can pass through the right-hand lens. These glasses are used in conjunction with another device which polarizes the image, such as a [ZScreen](#).

Adjust lines

A pattern applied to the image where its edge is to be blended with another image. Adjust lines are used to position the projectors in the array during the [edge blend](#) process.

Anamorphic lens

A special lens which, when used with the [TheaterScope aspect ratio](#), allows watching 2.35:1 content packed in a 16:9 source.

Aperture

The opening of the lens that determines the angle through which light travels to come into focus.

Notes

Aspect ratio

The proportional relationship between the width and the height of the projected image. It is represented by two numbers separated by a colon, indicating the ratio of image width and height respectively: for example, 16:9 or 2.35:1.

Not to be confused with [resolution](#).

Blanking (projection)

The ability to intentionally turn off, that is, set to black, areas around the edges of the projected image. It is sometimes referred to as “curtains” since it can be used to blank an area of image that literally falls on the curtains at the side of the screen in a movie theater. Usually no image resizing or geometric correction takes place and the “blanked” part of the image is lost.

Not to be confused with horizontal and vertical [blanking \(video signal\)](#).

Blanking (video signal)

The section of the video signal where there is no active video data.

Not to be confused with [blanking \(projection\)](#).

Blend region

The area of the image that is to overlap with another image in an [edge blend](#) setup. Sometimes called *overlapping region*.

Brightness (electronic control)

A control which adds a fixed intensity value to every [pixel](#) in the display, moving the entire range of displayed intensities up or down, and is used to set the black point in the image (see [Contrast](#)). In [Component Video](#) signals, brightness is the same as [luminance](#).

Brightness (optical)

Describes how ‘bright’ an image that is projected onto a screen appears to an observer.

C

See [Chrominance](#).

Notes

Chrominance

Also known as '**C**', this is the component, or pair of components, of a **Component Video** signal which describes **color difference** information.

Color difference

In **Component Video** signals, the difference between specified colors and the **luminance** component. Color difference is zero for monochrome images.

Color gamut

The spectrum of color available to be displayed.

Color temperature

The position along the black body curve on the chromaticity diagram, normally quoted in Kelvin. It takes into account the preset values for color balance in the service set-up to take up the variations in the prism. The projector allows you to adjust this temperature (i.e. adjust the picture color temperature).

Component video

A three-wire or four-wire video interface that carries the signal split into its basic **RGB** components or **luminance (brightness)** and two-**color-difference** signals (**YUV**) and **synchronization** signals.

Contrast (electronic control)

The adjustment of the white point of the image without affecting the black point. This increases the intensity range of the displayed image.

Contrast (optical)

The intensity difference between the darkest and lightest areas of the screen.

Cr, Cb

Color difference signals used with '**Y**' for digital **Component Video** inputs. They provide information about the signal color. Not to be confused with **Pr, Pb**.

Notes

Crop

Remove part of the projected image.

Alternatively, fit an image into a frame with a different **aspect ratio** by removing part of the image. The image is resized so that either its length or its width equals the length or width of the frame, while the other dimension has moved outside the frame; the excess area is then cut out.

Dark time

The time inserted between **frames** when using **3D active glasses**, to avoid **ghosting** caused by switching time between left and right eye.

DDC (Display Data Channel)

A communications link between the source and projector. DDC is used on the HDMI, DVI and VGA inputs. The link is used by the source to read the **EDID** stored in the projector.

Deinterlacing

The process of converting **interlaced** video signals into **progressive** ones.

DHCP (Dynamic Host Configuration Protocol)

A network protocol that is used to configure network devices so that they can communicate on an IP network, for example by allocating an IP address.

DMD™ (Digital Micromirror Device™)

The optical tool that transforms the electronic signal from the input source into an optical image projected on the screen. The DMD™ of a projector has a fixed **resolution**, which affects the **aspect ratio** of the projected image.

A Digital Micromirror Device™ (DMD™) consists of moving microscopic mirrors. Each mirror, which acts as a **pixel**, is suspended between two posts by a thin torsion hinge. It can be tilted to produce either a bright or dark pixel.

Edge blend

A method of creating a combined image by blending the adjoining edges of two or more individual images.

Notes

Edge tear

An artifact observed in [interlaced video](#) where the screen appears to be split horizontally. Edge tears appear when the video feed is out of sync with the refresh rate of the display device.

EDID (Extended Display Identification Data)

Information stored in the projector that can be read by the source.

EDID is used on the HDMI, DVI and VGA inputs, allowing the source to automatically configure to the optimum display settings.

EDTV (Enhanced Definition Television)

A [progressive](#) digital television system with a lower resolution than [HDTV](#).

Field

In [interlaced video](#), a part of the image [frame](#) that is scanned separately. A field is a collection of either all the odd lines or all the even lines within the frame.

Frame

One of the many still images displayed in a sequence to create a moving picture. A frame is made of horizontal lines of [pixels](#). For example, a 1920x1080 frame consists of 1080 lines, each containing 1920 pixels. In analog video frames are scanned one at a time ([progressive scanning](#)) or split into [fields](#) for each field to be scanned separately ([interlaced video](#)).

Frame rate

The number of [frames](#) shown per second (fps). In TV and video, a frame rate is the rate at which the display device scans the screen to “draw” the frame.

Frame rate multiplication

To stop low [frame rate](#) 3D images from flickering, frame rate multiplication can be used, which increases the displayed frame rate by two or three times.

Notes

Gamma

A nonlinear operation used to code and decode [luminance](#). It originates from the Cathode Ray Tube technology used in legacy television sets.

Ghosting

An artifact in 3D image viewing. Ghosting occurs when an image intended for one eye is partially seen by the other eye.

Ghosting can be removed by optimizing the [dark time](#) and sync delay.

HDCP (High-bandwidth Digital Content Protection)

An encryption scheme used to protect video content.

HDTV (High Definition Television)

A television system with a higher [resolution](#) than [SDTV](#) and [EDTV](#). It can be transmitted in various formats, notably [1080p](#) and 720p.

Hertz (Hz)

Cycles per second.

Horizontal Scan Rate

The rate at which the lines of the incoming signal are refreshed. The rate is set by the horizontal [synchronization](#) from the source and measured in [Hertz](#).

Hs + Vs

Horizontal and vertical [synchronization](#).

Hue

The gradation (red/green balance) of color (applicable to [NTSC](#)).

Notes

Interlacing

A method of updating the image. The screen is divided in two [fields](#), one containing every odd horizontal line, the other one containing the even lines. The fields are then alternately updated. In analog TV interlacing was commonly used as a way of doubling the refresh rate without consuming extra bandwidth.

Interleaving

The alternation between left and right eye images when displaying 3D.

LED (Light Emitting Diode)

An electronic component that emits light.

Letterboxing

Black margins at the top and bottom of the image. Letterboxing appears when a wider image is packed into a narrower [frame](#) without changing the original [aspect ratio](#).

Lumen

A photometric unit of radiant power. For projectors, it is normally used to specify the total amount of emitted visible light.

Luminance

Also known as '[Y](#)', this is the part of a [Component Video](#) signal which affects the brightness, i.e. the black and white part.

Noise

Electrical interference displayed on the screen.

NTSC (National Television Standards Committee)

The United States standard for television - 525 lines transmitted at 60 [interlaced fields](#) per second.

Notes

OSD (on-screen display)

The projector menus allowing you to adjust various settings.

Overlapping region

See [blend region](#).

PAL (Phase Alternate Line)

The television system used in the UK, Australia and other countries - 625 lines transmitted at 50 [interlaced fields](#) per second.

Pillarboxing

Black margins at the left and right of the image. Pillarboxing appears when a narrower image is packed into a wider [frame](#) without changing the [aspect ratio](#).

Pixel

Short for *Picture Element*. The most basic unit of an image. Pixels are arranged in lines and columns. Each pixel corresponds to a micromirror within the [DMD™](#); resolutions reflect the number of pixels per line by the number of lines. For example, a [1080p](#) projector contains 1080 lines, each consisting of 1920 pixels.

Pond of mirrors

Area around the periphery of the [DMD™](#) containing inactive mirrors. The pond of mirrors may cause artifacts, for example during the [edge blending](#) process.

Pr, Pb

[Color difference](#) signals used with 'Y' for analog [Component Video](#) inputs. They provide information about the signal color. Not to be confused with [Cr, Cb](#).

Primary colors

Three colors any two of which cannot be mixed to produce the third. In additive color television systems the primary colors are red, green and blue.

Notes

Progressive scanning

A method of updating the image in which the lines of each **frame** are drawn in a sequence, without **interlacing**.

Pulldown

The process of converting a 24 fps film footage to a video **frame rate** (25 fps for **PAL/SECAM**, 30 fps for **NTSC**) by adding extra **frames**. DP projectors automatically carry out reverse pulldown whenever possible.

Resolution

The number of **pixels** in an image, usually represented by the number of pixels per line and the number of lines (for example, 1920 x 1200).

RGB (Red, Green and Blue)

An uncompressed **Component Video** standard.

Saturation

The amount of color in an image.

Scope

An **aspect ratio** of 2.35:1.

SDTV (Standard Definition Television)

An **interlaced** television system with a lower **resolution** than **HDTV**. For **PAL** and **SECAM** signals, the resolution is 576i; for **NTSC** it is 480i.

SECAM (Sequential Color with Memory)

The television system used in France, Russia and some other countries - 625 lines transmitted at 50 **interlaced fields** per second.

SX+

A display **resolution** of 1400 x 1050 pixels with a 4:3 screen **aspect ratio**. (Shortened from SXGA+, stands for *Super Extended Graphics Array Plus*.)

Notes

Synchronization

A timing signal used to coordinate an action.

Test pattern

A still image specially prepared for testing a projection system. It may contain various combinations of colors, lines and geometric shapes.

TheaterScope

An **aspect ratio** used in conjunction with a special **anamorphic lens** to display 2.35:1 images packed into a 16:9 **frame**.

Throw distance

The distance between the screen and the projector.

Throw ratio

The ratio of the **throw distance** to the screen width.

TRC (Throw ratio correction)

A special number used in calculating **throw distances** and **throw ratios** when the image does not fill the width of the **DMD™**.

TRC is the ratio of the **DMD™ aspect ratio** to the image source aspect ratio:

$$TRC = \frac{DMD^{\text{TM}} \text{ aspect ratio}}{\text{Source aspect ratio}}$$

TRC is only used in calculations if it is greater than 1.

UXGA

A display **resolution** of 1600 x 1200 **pixels** with a 4:3 screen **aspect ratio**. (Stands for *Ultra Extended Graphics Array*.)

Notes

Vertical Scan Rate

The rate at which the [frames](#) of the incoming signal are refreshed. The rate is set by the vertical [synchronization](#) from the source and measured in [Hertz](#).

Vignetting

Optical cropping of the image caused by the components in the projection lens. This can happen if too much offset is applied when positioning the image using the lens mount.

Vista

An [aspect ratio](#) of 1.66:1.

WUXGA

A display [resolution](#) of 1920 x 1200 [pixels](#) with a 16:10 screen [aspect ratio](#). (Stands for Widescreen *Ultra Extended Graphics Array*.)

Y

This is the [luminance](#) input ([brightness](#)) from a [Component Video](#) signal.

YUV

See [Pr](#), [Pb](#).

ZScreen

A special kind of light modulator which polarizes the projected image for 3D viewing. It normally requires that images are projected onto a silver screen. The ZScreen is placed between the projector lens and screen. It changes the polarization of the projected light and switches between left- and right-handed circularly polarized light at the field rate.
