TAMSPURT

MOLECULE

Tamsulosin hydrochloride, an alpha-1A adrenoceptor antagonist.

EFFECTIVE

Significantly improves in both irritative and obstructive symptoms.

12 times more potent than prazosin as an antagonist.

10 times more selective in alpha 1A blocker than Alfuzosin.

TAMSPURT-D

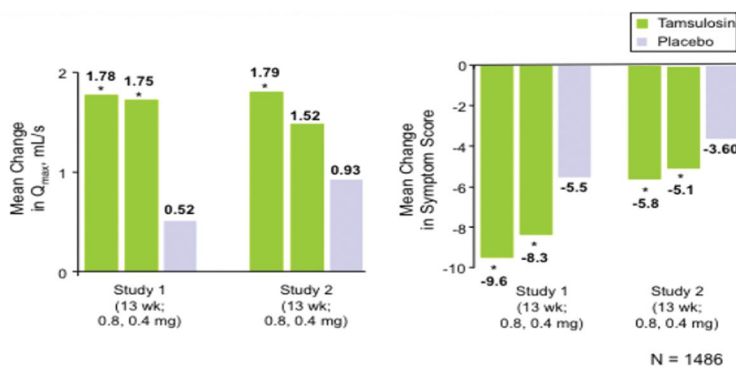

MOLECULE

Tamsput -D is a synergic formulation of Tamsulosin hydrochloride, an alpha-1A adrenoceptor antagonist and dutasteride, a common 5 - α reductase enzyme inhibitor.

EFFECTIVE

- Helps to improve urine flow and reduce symptoms of BPH.
- Helps in the shrinkage of the enlarged prostate gland.
- Prevent enlargement of the prostate gland

Clinical efficacy study

* $P \leq .05$ statistically significant difference from placebo.

Selective alpha 1A blocker

α 1-Blocker	α 1A : α 1B -Blocker
Tamsulosin	10:1
Alfuzosin	1:1

DOSAGE

1 tablet once a day or as directed by physician
