

X LOCK PRESENTATION

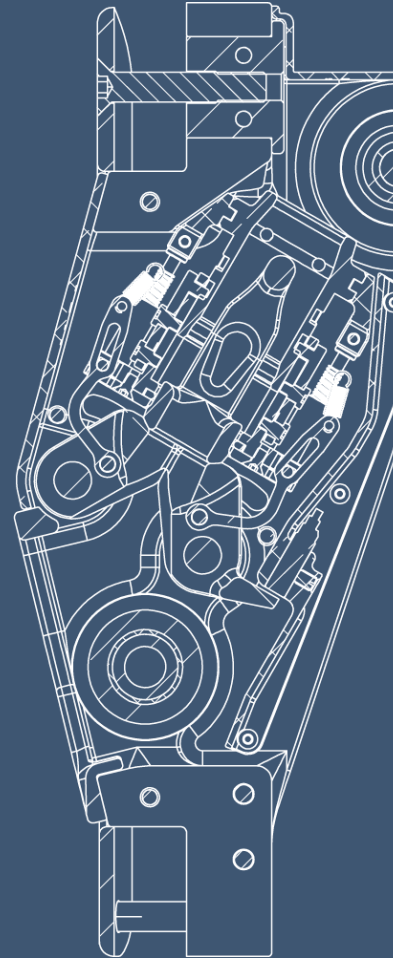

Rigging Projects

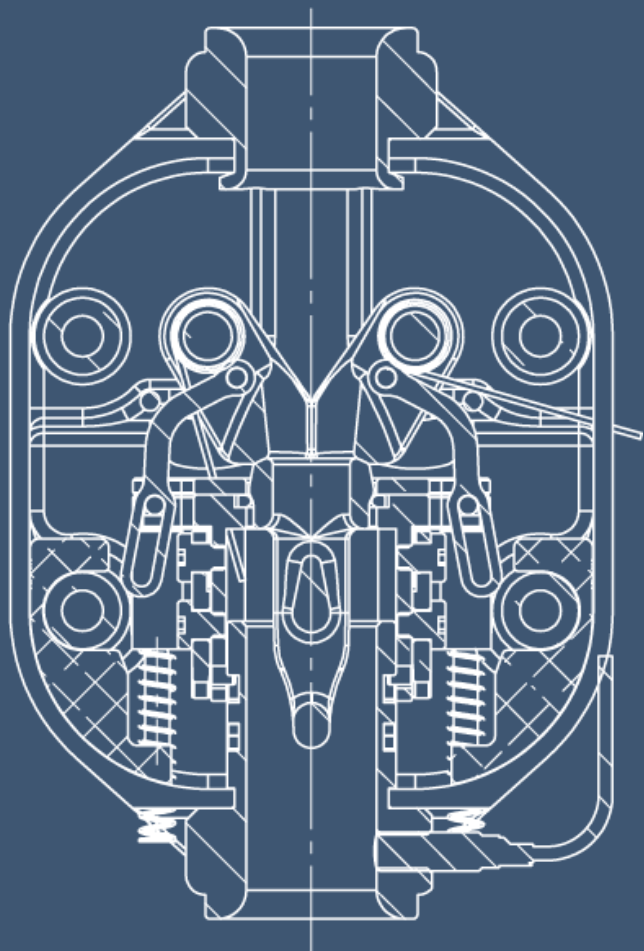

The X Lock, the *first and only*
automatic bullet-lock system
on the market. Designed
specifically to enhance modern
sailing through innovative,
user friendly technology.

WHY THE X LOCK?

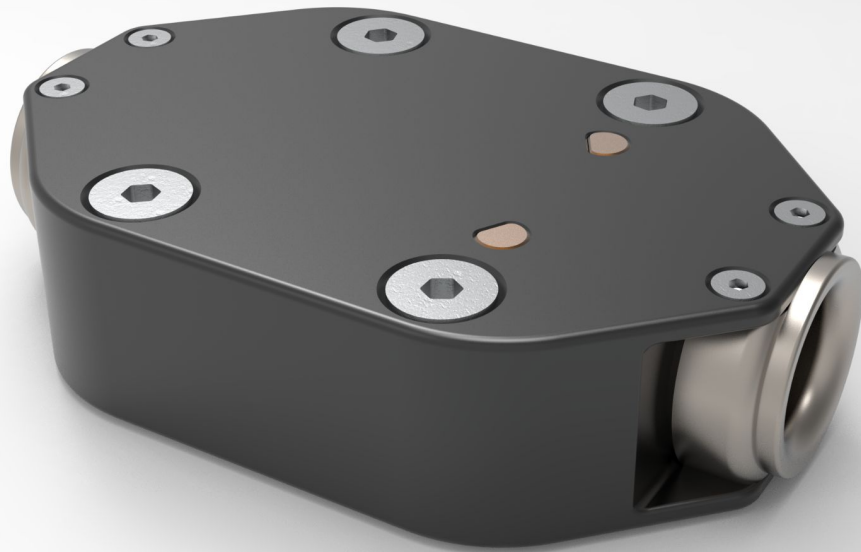

- The X Lock brings high-performance rigging technology to yachts from 40ft to 240ft+. Its automatic locking system simplifies hoisting and lowering sails with no complicated procedures or training required.
- The lock is one fully integrated unit, making installation and servicing straightforward. With removable covers, users can easily access internal components.
- One of the biggest advantages is that there are no trip lines required. This reduces complexity and increases reliability and safety at sea. No other locks on the market do this!

HOW IT WORKS

- To engage the lock, simply hoist the sail. To release, over-hoist. That's it!
- The X Lock's standard bullet handles a wider range of entry and exit angles than bayonet-style systems. This makes it more robust, especially in a dynamic or high-load situations.
- The removable plates mean that the X Lock can be serviced in-place, even at the top of a rig.

This isn't just a new product, it is a ***complete rethink*** of sail locking systems.

Simple, scalable and user friendly, it redefines what is possible in modern locking systems.
