

SAMSUNG

Your smart home just got smarter.

With the SmartThings app, it's easy to control your home's heating and cooling—anytime, anywhere. Change the temperature, switch modes, or check your energy use, whether you're at home or away.

SmartThings Energy takes it a step further, using AI to help you save energy, lower your bills, and stay comfortable—all without lifting a finger.

Confidence in every product, guaranteed.

We back all of our products with a robust warranty so homeowners can rest assured they're getting comfort and quality for years to come.

Your home's comfort, powered by Samsung.

You know Samsung for leading innovation in the devices and technology you use every day. Now it powers how you heat and cool your home— with advanced all-electric systems built for comfort, efficiency, and sustainability.

**Create your ideal environment,
one room at a time.**

- ✓ Energy efficient
- ✓ Easy installation
- ✓ Low maintenance

Mini split systems offer a simple way to heat and cool your home without ductwork. For rooms or additions with different needs than the rest of the house, a Samsung WindFree™* ductless system offers an efficient, hassle-free solution with greater control over comfort.

Whole home comfort made simple.

For smaller homes or fewer rooms, Samsung's FJM multi-zone system lets you set different temperatures in different areas of your home—like bedrooms, the living room, or your home office.

Need more zones or greater capacity? The DVM S Mini is built for larger homes, giving you more options to heat and cool multiple rooms—exactly the way you want.

Efficiency without compromise.

Looking for an easier upgrade? The Hylex™ system is a smart replacement for your old AC unit. It works with the ductwork and equipment you already have, so you can enjoy better efficiency and cleaner comfort—without the cost or hassle of replacing your whole system.
