

DIN-4 rail format for easy installation inside an electrical equipment box, or can be screwed directly onto the wall.

The power supply cannot be connected directly to the bus, given the DUOX System features, as the power supply and the data travel along the same wires. This requires the connection module.

The connection module in the power supply must be connected directly to the bus with the shortest possible cable length.

This module prevents the power supply from disturbing the operation of the other signals circulating throughout the system and also allows connecting more sources if the system so requires.
