

Safe, UL 94 V-0 Rated Network Cable Ties

PANDUIT continues to expand the [Elastomeric Cable Ties](#) product line with new lengths to accommodate a variety of cable bundle sizes. Elastomeric Cable Ties provide safety and reliability by protecting against over-tensioning of high performance fiber and copper cables. The soft material has no sharp edges and is UL 94V-0 flammability rated and halogen-free, minimizing the risk of building/equipment damage and promoting worker safety. The releasable design facilitates frequent moves, adds, and changes. *PANDUIT*® Elastomeric Cable Ties have an industry-accepted, user-friendly design and provide a tight, yet safe grip, preventing lateral movement on cable bundles.
