

# Plug Ends

The plug-end is placed in the tube at the opposite side of the motor. Its function is to be the interface between the rolling tube and the plug end bracket, that doesn't move.

Somfy has different kinds of plug-ends in its product offer.

Most of the plug-ends are 'universal', and can go in any tube, combined with a crown and/or a wheel to fit into the tube perfectly.

We also propose for heavy applications, specific plug-ends, they take more space in the tube but strengthen the whole application.
