[1] For more detailed information on the exact configuration of your machine/unit, please consult your relevant SICK branch office.

[2] The values displayed apply to a the temperature at the operating temperature measuring point and diagnostic degree of coverage of 99%, which must be achieved by the external evaluation unit.

[3] Depending on the application, the operating life may also be limited by the bearing lifetime.

[4] The safety-related accuracy indicates the maximum positioning error limit with which the safety functions can be supported.
