## LED Drivers

## CC COMPACT <br> DIMMABLE

# COMFORTLINE DIP SWITCH C-R5 100 V DALI2 <br> 187220 

## Typical Applications

Built-in in compact luminaires

- Office lighting
- Residential lighting

## Comfortline DIP Switch C-R5 100 V DALI2

- SELECTABLE OUTPUT CURRENT VIA DIP SWITCH
- DIMMABLE: DALI (ED. 2) AND PUSH BUTTON
- WIDE INPUT VOLTAGE RANGE: 100-240 V
- WITH INTEGRATED CORD GRIP FOR INDEPENDENT OPERATION
- SELV
- SUITABLE FOR BUILT-IN INTO FURNITURE
- PRODUCT GUARANTEE: 5 YEARS

## ComfortLine DIP Switch C-R5 100 V DALI2

## Product features

- Compact casing shape
- For independent operation with cord grip

## Functions

- Selectable current output by DIP switches
- The output current can be adjusted between 350 and 700 mA .

## Electrical features

- Mains voltage: $100-240 \mathrm{~V} \pm 10 \%$
- Mains frequency: $50-60 \mathrm{~Hz}$
- Push-in terminals: $0.5-1.5 \mathrm{~mm}^{2}$
- Power factor at full load: > 0.9
- Standby losses: $<0.5 \mathrm{~W}$
- Open circuit voltage (Umax.): 60 V
- Secondary side switching of LED modules is not allowed.

## Dimming

- Dimming range: 1 to $100 \%$
- If no dimming interface is connected, brightness will stay at $100 \%$.

## Safety features

- Protection against transient main peaks
up to 1 kV (between L and N)
- Electronic short-circuit protection
- Overload protection
- Overtemperature protection
- Protection against "no load" operation
- Degree of protection: IP20
- Protection class II
- SELV

## Packaging units

| Ref. No. | Packaging unit <br> Pieces <br> per box |  | Boxes <br> per pallet |
| :--- | :--- | :--- | :--- |

## Safety functions

- Transient mains peaks protection:

Values are in compliance with EN 61547
(interference immunity).
Surges between L-N: up to 1 kV
Surges between L/N-PE: up to 2 kV

- Short-circuit protection:

The control gear is protected against permanent short-circuit with automatic restart function.

- Overload protection: The control gears have overload protection due to limitation of DC output voltage $<60 \mathrm{~V}$.
Please check before switch-on mains power supply that the selected LED load is suitable (see Electrical Characteristics on data sheet).
- Overheating:

The control gears have overheating protection. In case of overheating the control gear will shut down. For restart switch of the mains for 1 min. and start again.
The temperature reduces the output current of the control gear in the event of overheating. The control gear is protected against no load operation (open load).

- If any of the above mentioned safety functions will be triggered, disconnect the control gear from the power supply then find and eliminate the cause of the problem.

## Assembly and Safety Information

Installation must be carried out under observation of the relevant regulations and standards. Installation must be carried out in a voltage-free state (i.e. disconnection from the mains). The following advices must be observed; non-observance can result in the destruction of the LED drivers, fire and/or other hazards.

## Mandatory regulations

- DIN VDE 0100
- EN 60598-1

## Mechanical mounting

- Mounting position: Independent application: Drivers with integrated cord grip are allowed to use for independent applications.
- Mounting location: Independent LED drivers do not need to be integrated into a casing. Installation in outdoor luminaires: degree of protection for luminaire with water protection rate $\geq 4$ (e.g. IP54 required).
- Degree of protection:
- Clearance:
- Surface:
- Heat transfer:
- Fastening:

## IP20

Min. 0.10 m from walls, ceilings and insulation
Solid and plane surface for optimum heat dissipation required.
If the driver is destined for installation in a luminaire sufficient heat transfer must be ensured between the driver and the luminaire casing.
LED drivers should be mounted with the greatest possible clearance to heat sources. During operation. the temperature measure at the driver's tc point must not exceed the specified maximum value.

- Tightening torque:

Using M4 screws in the designated holes
0.2 Nm

## Electrical installation

- Connection
terminals:
- Stripped length:
- Wiring:

Push-in terminals for rigid or flexible conductors with a section of $0.5-1.5 \mathrm{~mm}^{2}$
8-9 mm
The mains conductor within the luminaire must be kept short (to reduce the induction of interference).
Mains and lamp conductors must be kept separate and if possible should not be laid in parallel to one another.
Max. secondary side lead length for independent drivers: 1 m

- Polarity:
- Parallel connection: At secondary side is not allowed.
- Through-wiring: Is not allowed
- Secondary load:

The sum of forward voltages of LED loads is within the tolerances which are mentioned in the Electrical Characteristics on the data sheet.

- Wiring diagram:

DALI

PUSH

Note: Max. quantity of drivers at one push button: 5

## Selection of automatic cut-outs for VS LED drivers

- Dimensioning automatic cut-outs

High transient currents occur when an LED driver is switched on because the capacitors have to load. Ignition of LED modules occurs almost simultaneously. This also causes a simultaneous high demand for power. These high currents when the system is switched on put a strain on the automatic conductor cut-outs, which must be selected and dimensioned to suit.

- Release reaction

The release reaction of the automatic conductor cut-outs comply with VDE 0641, part 11, for B, C characteristics. The values shown in the following tables are for guidance purposes only and are subject to system-dependent change.

- No. of LED drivers

The maximum number of VS LED drivers applies to cases where the devices are switched on simultaneously. Specifications apply to single-pole fuses. The number of permissible drivers must be reduced by $20 \%$ for multi-pole fuses. The considered circuit impedance equals $400 \mathrm{~m} \Omega$ (approx. 20 m [2.5 mm²] of conductor from the power supply to the distributor and a further 15 m to the luminaire).

| Type | Ref. No. | Automatic cut-out type and <br> possible no. of VS <br> pcs. |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
| Autrivers |  |  |  |  |  |  |  |

- To limit capacitive inrush currents the current carrying capacity of each circuit breaker (fuse) can be increased by a factor of 2.5 with the help of our ESB (Ref. No.: 149820, 149821, 149822) inrush current limiters.
