

# Proximity Magnetic Sensors Explosive Environment Level Sensors Intrinsic Safety - ILM Series

- Spheric or cylindrical AISI316 stainless steel housing
- NO and CO output functions
- Suitable for explosive environments: for use in zone 0 or zones 1 and 2

## Product Description

The level magnetic sensors ILM.x.y/-MT EX M safety, intended for use in potentially explosive atmospheres, are realized and encapsulated following the "m" procedure of EN 50028 normative.

The level magnetic sensors ILM.x.y/-MT EX IA safety, intended for use in potentially explosive atmospheres, are realized to satisfy the EN 50028 concerning the intrinsic safety "i".

## Type Selection

Float diameter	Connection	Output function	Zone 1 and 2 II 2 G EEx m II T5	Zone 0 II 1 G EEx ia IIC T6
Ø 53 (Spheric)	PVC siliconic cable L= 2m	NO	ILM A 2 S EX	ILM A 0 S EX
Ø 53 (Spheric)	PVC siliconic cable L= 2m	CO	ILM S 2 S EX	ILM S 0 S EX
45 x 50 (Cylindrical)	PVC siliconic cable L= 2m	NO	ILM A 2 C EX	ILM A 0 C EX
45 x 50 (Cylindrical)	PVC siliconic cable L= 2m	CO	ILM S2 C EX	ILM S 0 C EX

Diameters are specified in millimeters (mm)

## General Specifications

Ambient temperature Operating	-20 to +60 °C	ILMS2CEX, ILMS0CEX Material Shape	45 x 50 mm AISI 316 stainless steel
Environment Degree of protection	IP 68 (cable output IP67)	ILMA2SEX, ILMA0SEX, ILMS2SEX, ILMS0SEX	Spheric
Temperature class Zone 0 Zones 1 and 2	T6 T5	ILMA2SEX, ILMA0SEX, ILMS2SEX, ILMS0SEX	Cylindrical
Float Diameter	Ø 53 mm	Min liquid specific weight	0.75 kg/dm <sup>3</sup>
ILMA2SEX, ILMA0SEX, ILMS2SEX, ILMS0SEX ILMA2CEX, ILMA0CEX,		Max. pressure	20 kg/cm <sup>2</sup>
		Approvals	ATEX ( by TUV Nord)
		CE-marking	Yes

## Electrical Connections

### Zones 1 and 2:

If the environment does not contain gases constantly, and verified all the other conditions, it is possible the use of the sensor in conformity with the reed contact characteristics, as in the following table; in this case, it

is mandatory to protect the circuit by 1.5 A fuse with a breaking capacity of at least 4kA.

### Zone 0:

The realization of the intrinsic safety circuit zone 0 has to be done using a safety barrier (i.e. a zener safety barrier) and a power supply apparatus, which must be compulsorily installed outside the hazardous area.

The aim of the safety barrier is to interface a non-intrinsic safety circuit to the sensor, realizing an intrinsically safe output for the sensor.

The values of parameters for use in intrinsic safety circuit zone 0 are listed in the following table.

## Output Specifications

<b>Output</b> ILMA2SEX, ILMA0SEX, ILMA2CEX, ILMA0CEX	NO	ILMS2SEX, ILMS0SEX, ILMS2CEX, ILMS0CEX	<b>Contact rating</b>	Change-over See Contact Specification table
--	----	---	-----------------------	--

## Contact Specifications

	<b>ILMA2*EX</b> (Zones 1 and 2)	<b>ILMS2*EX</b> (Zones 1 and 2)	<b>ILMA0*EX</b> (Zone 0)	<b>ILMS0*EX</b> (Zone 0)
Max Switching Voltage $U_i$	230 VAC	230 VAC	10.9 V	10.9 V
Max Switching Current $I_i$	3 A	1 A	15 mA	15 mA
Max Switching Power $P_i$	100 VA	60 VA	41 mW	41 mW
Effective Internal Inductance $L_i$	< 2 $\mu$ H	< 4 $\mu$ H	< 2 $\mu$ H	< 4 $\mu$ H
Effective Internal Capacity $C_i$	< 40 pF	< 350 pF	< 40 pF	< 350 pF

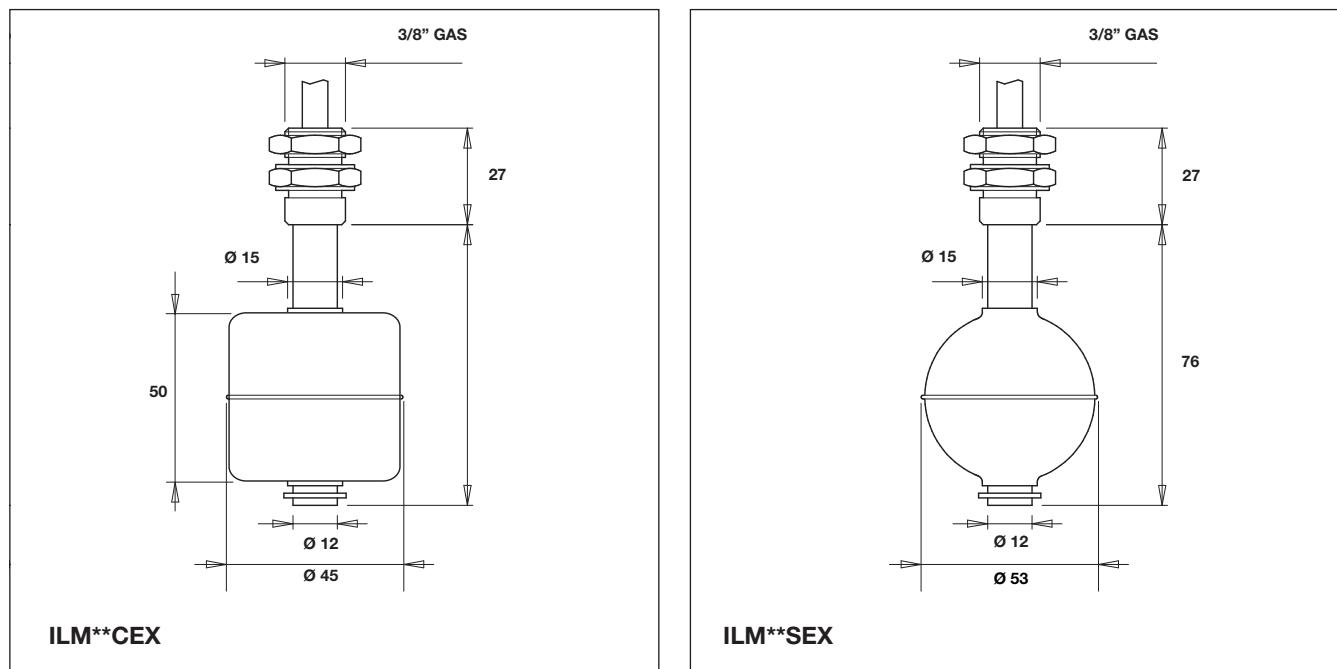

\* Maximum acceptable values of capacity and inductance at intrinsically safe terminals of the safety barrier, for II group and with voltages and currents listed in the table above, are:  
 $C_o$  2.05  $\mu$ F  
 $L_o$  = 165 mH.

Parameters  $C_i$  and  $L_i$ , added respectively to connecting cables capacity and inductance (if these parameters are unknown, for capacity  $C_c$  it can be used 180 pF/m and for inductance  $L_c$  = 0.60  $\mu$ H/m), must not exceed  $C_o$  and  $L_o$  values indicated above.

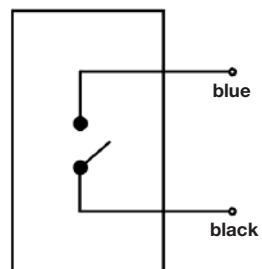

Maximum r.m.s voltage applicable to non-intrinsically safe terminals of associated electrical apparatus (barrier) without invalidating the intrinsic safety is  $U_m$  = 250 VAC.

The conditions required to satisfy the safety of a system are:  
 $U_o \leq U_i$   
 $I_o \leq I_i$   
 $C_o \geq C_i + C_c$   
 $L_o \geq L_i + L_c$
