

LC Lock-In Duplex Clip

PANDUIT LC Lock-In Duplex Clip secures connections to reduce network downtime, data security breaches, and hardware replacement due to theft. The LC Lock-In Duplex Clip is used with *OPTI-CORE* LC and Keyed LC Patch Cords to limit access and prevent unauthorized removal of cable, other networking equipment or critical connection. The installation/removal tool allows connectors to be locked into or released from adapters in modules, FAP's, cassettes or patch panels for enhanced physical security.
