S300 Mini Remote: Protective field switch with the help of a Flexi Soft safety controller

Two S300 Mini Remote

Protective field evaluation and switching via EFI using a Flexi Soft safety controller

Comments

¹⁾ Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

Protective field switching between an S3000 Expert and an S300 Mini Remote with static and dynamic inputs

Operating mode: without restart interlock with external device monitoring

Direction of travel-dependent dynamic protective field switching using the incremental encoders C and D as well as static protective field switching using the control inputs A and B of the S3000. The protective fields affect the OSSDs on the S3000 Expert.
