- Surge Protection Devices
- Type 1 (Class I, T1, B)
- Tested according to EN 61643-11
- Maximum impulse current  $I_{imp}$  35 kA (10/350 µs) per phase and 100 kA for NPE module
- Maximum continuous operating voltage  $U_c$  385 V for phase device
- Versions with 1+0, 2+0, 3+0, 4+0, 1+1, 3+1 and 0+1 (N-PE) connection

The Ex9UE1 35 line is a group of Class I Surge Protective Devices. They are intended as a protection against direct hit of lightning strokes of high intensities or in installation with often occurrence of lightning strokes. In standard three phase TN-C grid, they provides protection over LPL I requirements given in EN 62305 with total lightning current introduced into electrical installation over 100 kA and total lightning stroke current 210 or 280 kA based on physical configuration and mutual position of grounding point of lightning rod, grounding point of the electrical installation and place of SPD installation.

The design of Ex9UE1 35 is fully based on Spark Gap solution. It brings very high capability and life time and full insulation in case of no overvoltage is present. Thus, these SPDs can be used also upstream to energy meters and can be intended for IT grids (with respective special tests).

The high value of  $I_{imp}$  makes these SPDs suitable also for single phase outlets which are wired out of LPZ 0-1 and thus can be hit with direct lightning stroke. Due to the single phase cable, the total lightning current is split to 3 conductors only and intensity per conductor is thus higher than in the case of ingoing three phase cable.

## Type 1 SPDs (Class I, T1, B) complete devices

- Maximum impulse current  $I_{imp}$  35 kA (10/350 µs) per Ex9UE1 35 module and 100 kA (10/350 µs) for Ex9UE1 100 NPE module
- Nominal discharge current  $I_n$  35 kA (8/20 µs) per Ex9UE1 35 module and 100 kA (8/20 µs) for Ex9UE1 100 NPE module
- Maximum continuous operating voltage  $U_c$  385 V AC per Ex9UE1 35 module and 260 V AC for Ex9UE1 100 NPE module
- Due to  $I_{imp}$  35 kA per module suitable for LPL I - IV according to EN 62305 in standard 3-phase TN-C and TN-S installations
- Coordination with class II SPDs:

Ex9UE2 20 xx 440 – direct coordination

Ex9UE2 20 xx 275 – coordination with cable of minimum length of 10 m in between Ex9UE1 35 and Ex9UE2 20 xx 275
