

SPEECH INTELLIGIBILITY TREATMENT (SIT)

First Week

- The child will learn the behaviors and start at word level
- Blocked practice of 7 phrases chosen by parents to be functional and important for the child
- Provide frequent feedback

Second Week

- There will be more trials focusing on sentence-level activities
- Trials include shorter, more frequent practice of chosen phrases
- SLP will provide less frequent feedback and encourage self-monitoring in child

Third Week

- This phase focuses on conversation and communication with unfamiliar listeners
- Sessions include random practice of chosen phrases
- SLP provides only a few cues and ask child how they think they sound
