

Aspen Ci Knee

Frame orthosis for guidance and stabilization with extension / flexion limitation.

The CI Knee Orthosis was developed to treat different types of instabilities (e.g. cruciate ligament and meniscus injuries). It improves the patient's self-confidence during increased mobility demands.

The double strut construction helps to maintain knee stability, while the flexion and extension limits can be easily adjusted at the joint to control the range of motion.

This brace is part of the Aspen MP brand!

With **25 years** of research driven design, Aspen is committed to providing patients with effective solutions to their unique spinal conditions.

Easy application

Quick Release ensures an easy application of the orthosis.

Double strut construction

Construction with double joints for increased stability.

High quality aluminum

Offers stability and support in case of ligament injuries (anterior and posterior cruciate ligament) and other instabilities for increased stability.

Range of Motion

Easy control of the required range of motion.

Reference Left	Reference Right	Size	Thigh circumference 15 cm above mid-patella	Calf circumference 15 cm below mid-patella
ASP-652001	ASP-652006	S	39 - 47 cm	30,5 - 35,5 cm
ASP-652002	ASP-652007	M	47 - 53,25 cm	35,5 - 40,5 cm
ASP-652003	ASP-652008	L	53,25 - 59,5 cm	40,5 - 47 cm
ASP-652004	ASP-652009	XL	59,5 - 67,25 cm	47 - 50,75 cm
