

cold compression therapy

dr. Aktive CCT Knee

The dr. Aktive CCT Knee is an easy to use and effective cold compression therapy device designed for the knee, featuring innovative design technology that is lightweight and comfortable to use.

The CCT is ideal for use to treat sprains, sports injuries, arthritis and muscle tiredness as cold compression therapy constricts blood vessels which reduces swelling and inflammation, providing effective pain relief.

Easy to use

- Features a velcro fastening to ensure correct positioning and comfort, allowing adjustable compression and support.
- Includes removable inner gel pack that can be placed in the fridge or freezer.

Innovative technology

- Designed incorporating the latest in Cold Compression technology.
- Includes detachable gel lining which can be placed in the fridge/freezer and inflation pump with a convenient two-way cut-off valve.
- Ambidextrous system: all supports are suitable for both left and right side.

Benefits

- Cold compression therapy help to minimise pain and discomfort and reduces swelling.
- Suitable to treat patellar tendinopathy (jumper's knee), iliotibial band friction syndrome, meniscal tears, cruciate and collateral ligament injuries, tendinopathies, bursitis, sprains and strains.
- Ideal for rehabilitation and post-operative use.
