

Telescopic post-op knee brace with graduated movement

Indications

- Post-operative treatment requiring protection of knee's flexion-extension (ligament reconstruction, transposition of the anterior tibial apophysis, fractures of the distal third of the femur, fractures of the proximal third of the tibia, patella fractures, tendon injuries of the extensor system)
- Post-traumatic phase of knee sprains
- Valgization and varization osteotomies

Flexion from -10° to $+120^{\circ}$
with intervals of 10°

Extension from -10° to $+90^{\circ}$
with intervals of 10°

Fast lock joint from -10° to $+90^{\circ}$
with intervals of 10°

Features & benefits

- **Telescopic and easy to adapt** to the patient thanks to the buttons present on the valves
- **Lateral articulated hinge** in a light alluminium alloy
- New "**PUSH&SET**", range of motion control for easy adjustment
- Valves with strap-loops and structural lock joint
- Removable and washable **condyle protection pads**
- **MTP pads** to limit brace movement and protect the leg from direct contact with the hinges
