

Introducing the newest Vikan 24" Heavy-Duty Push Broom

3195x

Available colors: +2 +3 +4 +5 +6 +7 +8 +9 +66 +88

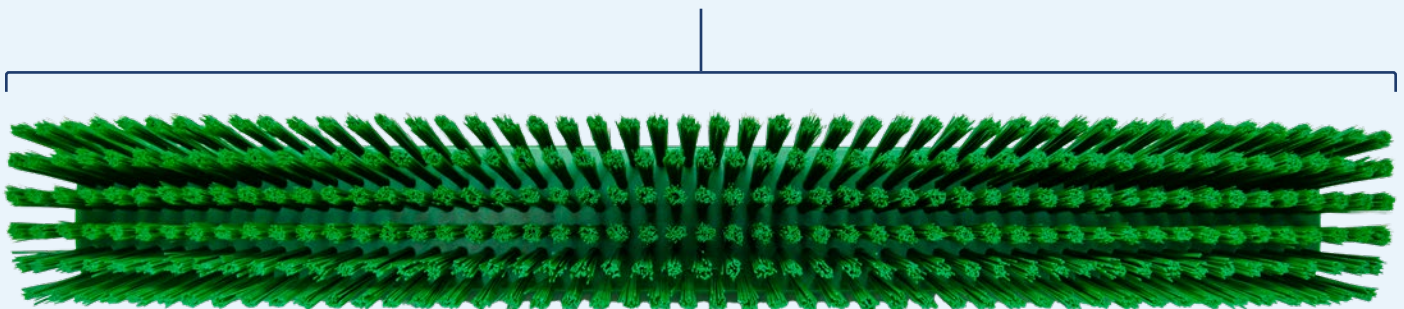

The heavy-duty push broom at a glance

This push broom is designed with the unique expectations of the US market in mind. The broom head is heavier than other Vikan models to better maintain contact with floors during sweeping. The broom also has more bristles to sweep more efficiently. The combination of soft and stiff bristles, coupled with an angled bristle cut, lets users sweep large areas faster and more effectively.

Enhanced bristle arrangement

The 24" wide broom block has more bristles than other models. The bristle arrangement includes two rows of stiff bristle bundles in the front and four rows of soft bristle bundles in the back.

Similar Vikan Brooms

24" Combo Push Broom

3194x

This combo broom can easily loosen stubborn dirt and gather finer particles, but requires more effort to achieve similar results to the 3195x due to its bristle cut and lighter-weight block.

24" Small Particle Push Broom

3199x

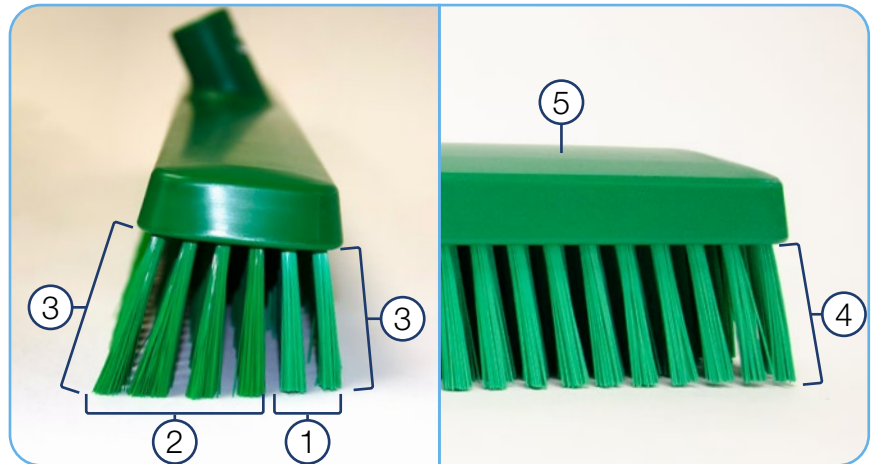

This soft-bristle broom is good at sweeping up fine debris, but is not as effective at loosening stubborn or heavy debris as the 3195x.

What sets the new heavy-duty push broom apart?

24" Heavy-Duty Push Broom

3195x

- ① The front two rows use stiff bristles to loosen and sweep stubborn and larger debris.
- ② The four rows of soft bristles in the back are designed to sweep any small or fine debris.
- ③ The angle cut of the bristles from front to back improves effectiveness and prevents the broom from skipping or hopping while being pushed.
- ④ The bristles on the ends flare out to reach into wall and floor junctions.
- ⑤ The broom head is heavier than other Vikan models to better maintain contact with floors during sweeping.
