

We care for quality

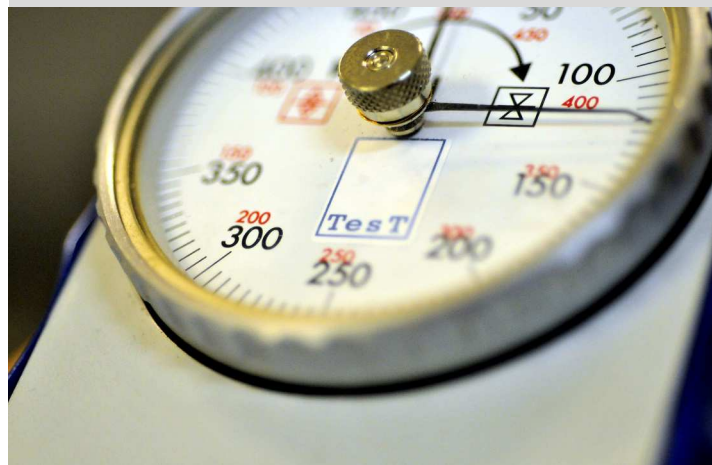

Test GmbH

Always one step ahead

Continuous pursuit of high quality, practical orientation and customer focus, as well as developing innovative test systems, they together form the basis of the organisational culture at **Test**. This is reflected in our solutions and services in the field of materials testing.

Our universal testing machines for tensile, compressive, bending and torsional forces are used in research and quality management on materials and components. The product range is completed by force and torque gauges.

Modern technologies bring new materials, which in turn require new applications, features and components. From conceptual design and implementation, to installation and training, to maintenance and calibration of test systems, we offer a complete supply chain to our customers.

„Our high demands in terms of quality challenge us every day to conscientious planning, professional execution and continuing education. Because we care for quality.“

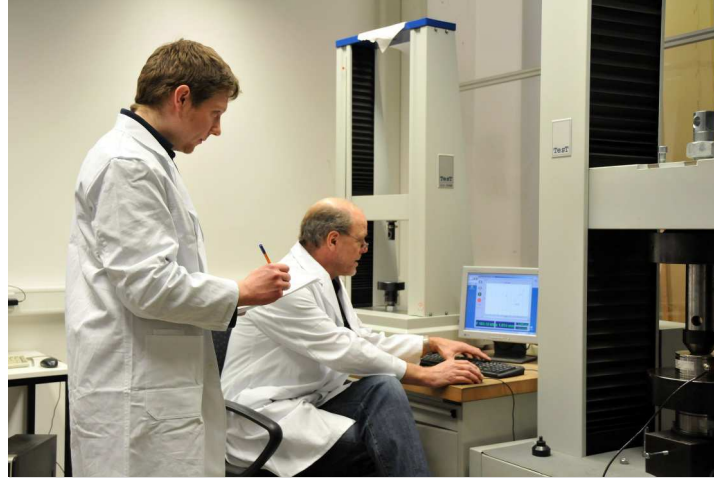

TesT stands for...

...a progressive, customer-oriented company with worldwide recognition in the fields of component and materials testing, manufacturing of calibration machines, screw and bolt testing facilities as well as associated services.

The clientele ranges from the automotive industry and its suppliers, packaging manufacturers, plastic and chemical industry to food manufacturers. By means of continuous, flexible adaptation to customers needs market shares in niches could be obtained. Since its incorporation in 1994 **TesT** has recorded steady growth.

Investment in Research and Development

As a future-oriented company, we consciously invest in research and development. Questioning of existing, dare lateral thinking and different perspectives, these are the preconditions for creative engineering. The cooperative team spirit of our employees in the areas of electronics, mechanical engineering, physics and computer science plays an important role.

Our engineers closely collaborate with customers in almost every industry, as well as with numerous research institutes and universities, in order to develop new products and to realize technically and economically convincing solutions. Trust in our experiences gained in numerous projects that we have successfully carried out around the world, together with our customers. We see your testing task as our challenge.

**We are always at your disposal
for personal consultation!**

Products and Services

TesT develops, manufactures and distributes machines, equipment and components for the testing of material properties and functions. These are for example used in automotive and food industries, as well as in electrical and medical applications.

Industry: Measuring and testing technology, DAkkS Calibration Laboratory

Products:

- Universal testing machines for tension, compression, bending, torsion (also multi-axial)
- Friction coefficient testing machines for fasteners from M3 to M80
- Vibration testing machines for fasteners up to M48
- Force and torque sensors
- Electronic handheld dynamometers
- Digital indication devices
- Factory and DAkkS calibrations for the quantities:
 - Force
 - Materials testing machines

Test

Products and Applications

Materials testing machines for tensile, compressive and bending testing

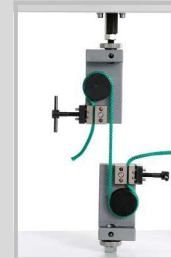

Torsion testing machines

Screw and bolt testing machines

Handheld dynamometers and sensors

Various clamping devices for all kinds of specimens

Machine for precision torsion testing

Friction coefficient testing machine for screws and bolts with 2 drives and heating unit

Testing machine for package materials (BCT)

Tensile, compressive and bending testing on components

Ampoule testing machine for pharmaceutical industry

Striking a new path: Sales via e-commerce

Until today **Test** has pursued the traditional distribution channels, either by telephone and / or personal consultation. Especially with customised solutions, specially designed models or modernisations, as well as consulting-intensive systems, personal service to our customers is essential.

For smaller, standardised products, such as load cells, force and torque sensor, handheld force gauges, electronic units, software and accessory the distribution via an e-commerce solution is possible and useful. The aim is to strengthen the sales of these product families by launching a **Test** Online Shop. Of course, also in future our customers will be advised professionally and competently.

Did you already know...?

Test GmbH is certified according to ISO 9001, ISO 13485 and ISO 17025 and maintains a DAkkS Calibration Laboratory for the quantities 'Force' and 'Materials Testing Machines'.
