Railless Wire Management Solutions

Industry-Leading Wire Management Solutions built into SnapNrack Railless Systems

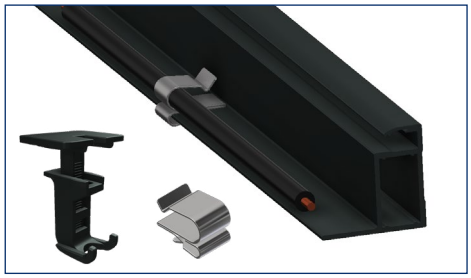

SnapNrack Railless Wire Management Solutions provide all the necessary means of managing wires and cables in your solar array. Products are specifically engineered to manage module leads, cables, and electronic equipment so that you have a solution for every component of the rooftop installation.

Why Installers Choose SNR

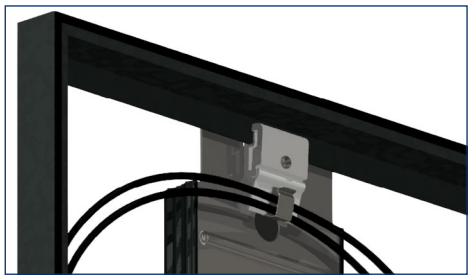

- Simple design allows the system to be installed by a single installer on the roof
- Drop-in features make the install process intuitive and fast
- System designed with maximum versatility for any arrays including staggered
- Easier logistics through simple box packaging and no long rails

Features & Benefits

Smart Clip II & XL & Wire Saver

- Unlike traditional wire clips, the Smart Clip holds wires securely above the module flange, preventing them from being loosened or damaged during installation
- Smart Clips are available in two configurations for securing 2 or up to 6 module leads
- Wire Savers are ideal for post-installation, allowing installers to fix lose wires without removing modules

MLPE Frame Attachment Kit

- Integrated Smart Clip II allows installers to tuck away wires and cables, helping to eliminate excessive clips along the module frame.
- All-aluminum Bracket-to-Frame contact provides superior hold and anti-rotation features

Junction Boxes with SpeedSeal™ Technology

- Benefit from SpeedSeal™ Technology to easily deck mount Junction Boxes without having to pry up shingles
- FlashBox™ with integrated flashing provides a pass through for attic runs
- Junction boxes available in different sizes & applications for multiple wire management situations

Conduit Supports

- Universal Conduit Mount Assembly is a one size conduit clamp to reduce SKU count
- Multiple options for all composition shingle applications including SpeedSeal™+ Technology
- Compatible with all 3/4″ or 1″ standard EMT conduit
