

APEX

BY REPROSCAN

The Apexx by ReproScan is designed to elevate your ultrasound experience. Utilizing the trusted foundations of our other models, we designed a unit with improved image quality and more viewing device options. Apexx takes image quality to the next level with its 128-crystal probe and now offers Wi-Fi capabilities. Its durability paired with an interchangeable battery ensures this ultrasound machine will last all day no matter your working environment. The Apexx can be paired with goggles for rapid deployment at the dairy. For beef cattle scanning, Apexx can be direct wired to our 2.0 monitor for maximum image quality or utilize the wireless capability for ultimate setup versatility. The Wi-Fi option allows your tech or anyone helping chuteside, see what you are scanning. Plus, you can save images or clips, making record keeping easier than ever with the Apexx app. Apexx is available in a linear probe model for arm-in scanning or a convex probe model which pairs with the ReproArm, saving your arm in the long-run!
