

All Covid-19 vaccines have been carefully tested and are safe

The vaccines have to meet rigorous safety and ethical standards before they are licenced for use. After initial development, vaccines go through four further stages of testing before being approved.

learn.tearfund.org

Most vaccines require at least two doses to be effective

Taking a second dose of a two-dose vaccine significantly increases your defence against Covid-19. Booster vaccines increase this protection further, especially for the most vulnerable

Covid-19 vaccines are Halal and are permissible under Sharia Law

This has been declared by the Medical Fiqh Symposium. None of the Covid-19 vaccines approved by the World Health Organisation contain any animal or human cells. Local healthcare providers will confirm if vaccines are Halal-certified.

All Covid-19 vaccines meet international ethical standards

Some people are worried that the vaccines may contain aborted fetal cells. This is not true. No Covid-19 vaccines contain cells from aborted fetuses, or animal products of any kind.

Vaccination is the best way to protect your family and community from Covid-19

Maintaining social distance, frequently washing your hands and wearing a face covering also reduce the risk of infection.

learn.tearfund.org

Vaccination is the most effective way to reduce the risk of death and hospitalisation as a result of Covid-19

Some people who have been vaccinated will still become ill, because no vaccine is 100 per cent effective. But the symptoms are likely to be mild and only last a short time.

learn.tearfund.org

Covid-19 vaccines significantly reduce the risk of serious illness

Healthy eating, regular exercise and plenty of sleep also help to support a strong immune system
