Electronic by Fantini, design 967Arch

A14 by QuadroDesign, design Maddalena Casadei

Electronic by Fantini, design 967Arch The wall-mounted tap series designed by 967arch for Fantini arises from the need to reduce water delivery to a primary gesture, eliminating every superfluous element to achieve a single, precise mark in space. Its form is the result of work on geometries and the alignment of the spout, valve body, and control system, in a careful balance between technical constraints and design intent. Electronic is available in an electronic version for intuitive, hygienic, and water-saving use, and in a mechanical version with a progressive cartridge for precise temperature and flow control.
