

PUPPY DOG FOOD - CHICKEN

Racinel is a Danish produced feed for dogs and cats, in which the largest part of the raw material is sourced from the Nordic countries (Scandinavia). The products contain a high quality of raw materials, which ensures, that the dogs and cats absorb most of the nutrients. Racinel complies with the recommendations from FEDIAF, which is the European standard for the nutrition for dogs and cats. This product is produced without grain. Puppies undergo a rapid development during their period of growth. They grow fast and therefore they need extra energy during this phase. At the same time, their intestinal system is undergoing development and maturing,

making it an additional challenge for the digestive system to absorb all the nutrients and energy needed for growth. This is why puppies have an increased risk of having diarrhea, as they need almost more food than the digestive system can hold, to get sufficient nutrition. At the same time, puppies are learning how to eat dry food, which is also a challenge for the digestive system. However, it is important to say, that most puppies get over the diarrhea and therefore it is rarely necessary to change feed. The immune system is stimulated by providing antioxidants that help develop the immune system.

UK COMPLETE FEED FOR DOG

Net weight: 3 kg. **Composition:** Processed animal protein (poultry/chicken, 24%), peas, whole potato, potato starch, chicken fat, pea starch, salmon oil (cold pressed), beet pulp (2%), dried whole egg, minerals, lecithins, fructo-oligosaccharides (0.1%), glucosamine, chondroitin sulphate. **Ready to serve. Dogs must always have access to a bowl of fresh drinking water.** **Storage:** Dry and cool. Keep the bag tightly closed after opening or store in a closed container. **Best before and Lot number:** See date / batch number stamp.

FI TÄYSREHU KOIRILLE

Nettopaino: 3 kg. **Koostumus:** Käsitelty eläinvalkuainen (siipikarja/kana 24%), herne, kokonainen peruna, perunatärkkelys, kananrasva, hernetärkkelys, lohiöljy (kylmäpu-ristettu), juurikasleike (2%), kuivattu kokonainen muna, kivennäiset, lesitiinit, frukto-oligosakkaridit (0,1%), glukosamiini, kondroitiinisulfaatti. **Tarjoiluvalmis. Koirilla tulee aina olla saatavilla kulhollinen raikasta juomavettä. Säilytys:** Kuivassa ja viileässä. Säilytä avattu pakkaus tiiviisti suljettuna. **Parasta ennen ja erän numero:** Katso päiväys / erän numero leimasta.

SE HELFODER FÖR HUNDAR

Nettovikt: 3 kg. **Sammansättning:** Bearbetat animaliskt protein (tamfågel/kyckling 24%), ärtor, torkade hela ägg, potatisstärkelse, kycklingfett, ärtstärkelse, laxolja (kallpressad), betmassa (2%), torkade hela ägg, mineraler, lecitiner, fruktooligosac- karider (0,1%), glukosamin, kondroitinsulfat. **Klart att servera. Hundar ska alltid ha tillgång till en skål med friskt dricksvatten. Förvaring:** Torrt och svalt. Förslut påsen ordentligt sedan den öppnats. **Bäst före och partinummer:** Se stämpel med datum/partinummer.

DK FULDFODER TIL HUND

Nettovægt: 3 kg. **Sammensætning:** Forarbejdet animalsk protein(fjerkræ/kylling 24%), ærter, hel kartoffel, kartoffelstivelse, kyllingefedt, ærtestivelse, lakseolie (koldpresset), roesnitter (2%), tørrede helæg, mineraler, lecithin, fructo-oligosakka- rider (0,1%), glucosamin, condroitinsulfat. **Klar til servering. Hunde skal altid have adgang til en skål frisk vand. Opbevaring:** Tørt og køligt. Hold posen tæt lukket efter åbning. **Bedst før og lot nummer:** Se dato / lot nummer stempel.

NO KOMPLETT DYREFÔR FOR HUNDER

Netto vekt: 3 kg. **Sammensetning:** Behandlet animalsk protein (fjerkre/kylling 24%), erter, hel potet, potetstivelse, kyllingfett, ertestivelse, lakseolje (kaldpresset), bete- masse(2%), tørket helt egg, mineraler, lecitiner, fruktoligosakkarider (0,1%), gluko- samin, kondroitinsulfat. **Klar til servering. Hunder må alltid ha tilgang til en skål med friskt drikkevann. Oppbevaring:** Tørt og kjølig. Hold posen tett lukket etter åpning. **Best før og lotnummer:** Se stempel med dato/partinummer.

FEEDING INSTRUCTIONS

The puppy's growth phase is incredibly intense and fast. They will increase their birth weight by a factor of 50 for the small dog breeds and by up to a factor of 100 for the large dog breeds. For the puppy to get enough energy for this intense growth, it has to consume rather large amounts of feed. Since their digestive system is also immature, it is a bit of a challenge for puppies to ingest these quantities. To avoid overloading the puppy's digestive system, it is important to distribute the daily feed ration to as many servings as possible, preferably 5 servings or more, as it reduces the risk of a diarrea, because the strain on the bowel is reduced. When the puppy is over 6 months you can easily reduce to 3 servings daily. When the puppy is about to become an adult, it will be optimal to feed twice a day and continue this into adulthood.

Dogs with adult weight of 1-10 kg are adults at 8-10 months.
Dogs adult weight of 10-25 kg are adults at 12 months.
Dogs adult weight of 25-45 kg are adults at 15 months.
Dogs adult weight over 45 kg are adults at 18 months.

Pregnant bitches: From the 6th gestation week the feed quantity should be increased by approx. 10% per week until birth.
Lactating bitches: Feed ad libitum

The feeding guide is an indication only, as the nutritional requirement of individual puppies varies according to breed, sex, activity level etc.

* For more detailed feeding guide, please see www.racinel.com
