

# NEW PRODUCT!

Announcement Number: S04091901

## #JF015E-PISTON

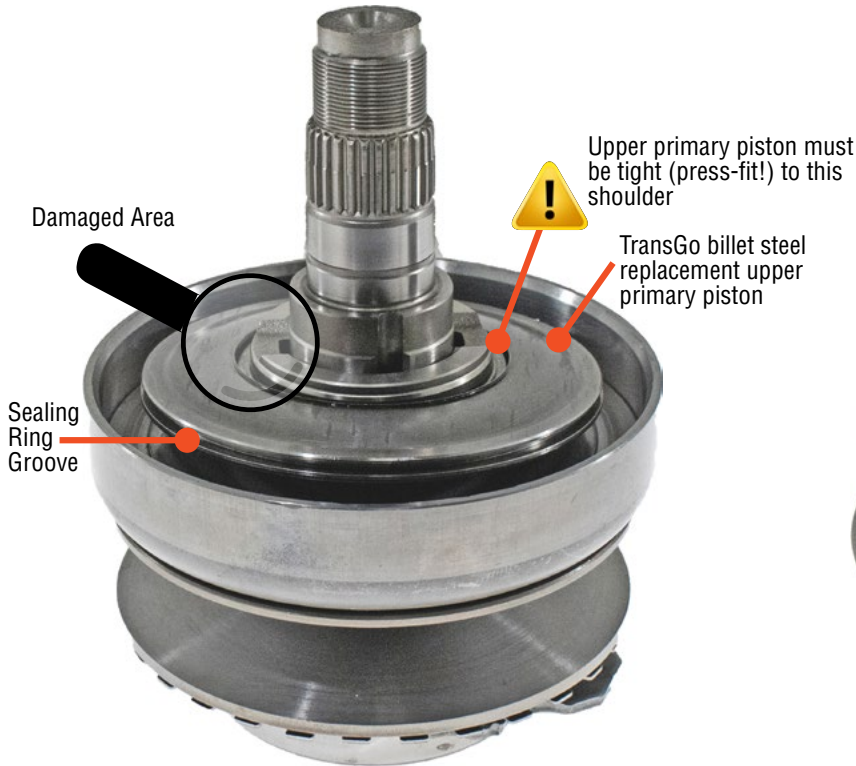

JATCO/NISSAN JF015E/REOF11A

**CNC machined billet steel  
replacement upper primary piston**

**Don't overlook this very common hidden failure. This piston **MUST BE PRESS-FIT** or it will leak.**

Slipping pulleys, with or without codes, get worse when hot. This is likely due to upper primary pulley ID piston damage. The upper primary piston's inner seal is press-fit onto the shoulder of the pulley sheave. A worn or loose fitting piston leaks primary pulley-pressure, causing the belt to slip.

**Primary pulley assembly**

**Secondary pulley assembly**

**ENGINEERED FOR PERFORMANCE.  
DESIGNED FOR DURABILITY.**
