

700-P

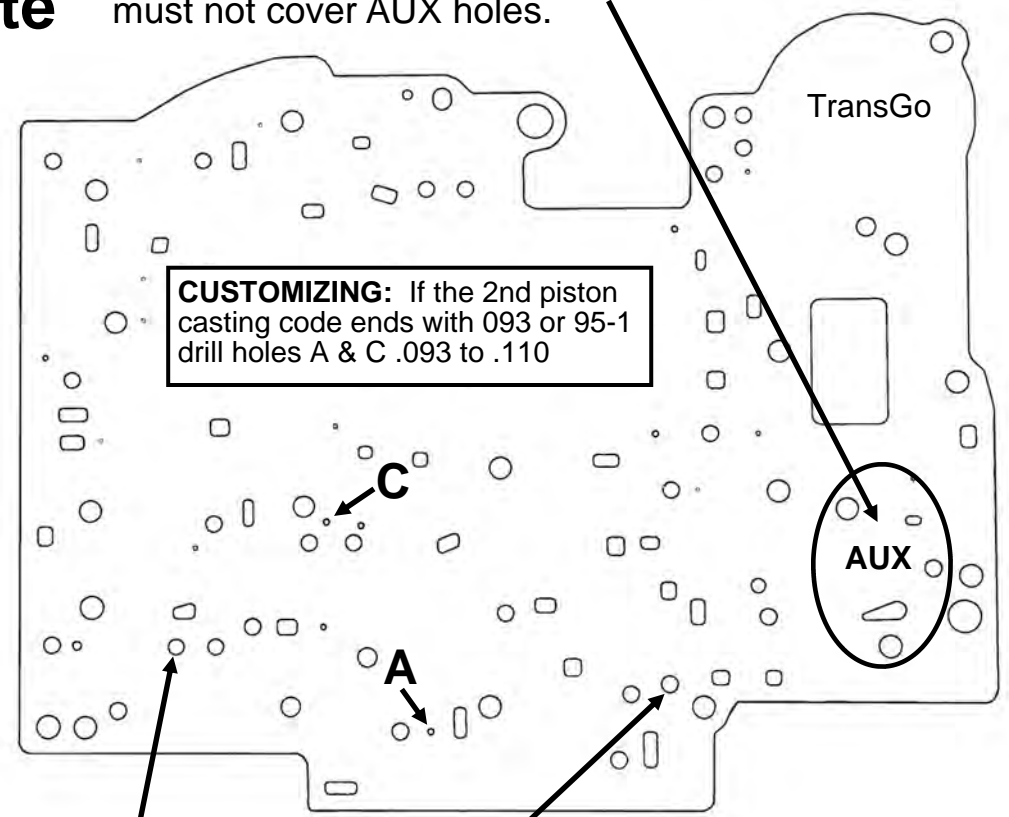

Separator Plate Fits: 1982 to 93

This plate fits all models.
87up gaskets [Aux VB type] work best.

Don't worry about extra holes, It's OK.
If gaskets cover hole "C" cut gaskets to clear hole. If trans has auxiliary VB the gaskets must not cover AUX holes.

If VB does not have roll pin here plug this hole with slug furnished.

CUSTOMIZING: If the 2nd piston casting code ends with 093 or 95-1 drill holes A & C .093 to .110

If the Trans **HAS** auxiliary valve body, plug this hole with slug furnished.

Very nice stuff.

Installing slug in hole: Put plate on cement floor with this side up. Insert slug into hole. Hit with light hammer several good whacks. That's it.
