

Upbound – Crossplane reinvented for the enterprise cloud

upbound

Upbound powers your cloud native platform. Create a custom enterprise cloud on top of AWS, GCP, Azure, or your own infrastructure with a single point of management and control. With Upbound, you can provide simple abstractions for your developers that ease adoption, reduce cognitive load, and increase velocity. Just define your APIs, map them to cloud services and you're done.

WHAT YOU GET WITH UPBOUND

Managed Control Planes

Whether you need to deploy a single Crossplane or hundreds, Upbound manages the lifecycle and underlying infrastructure for you.

Production Ready

Scale to thousands of resources and hundreds of Crossplanes. Our fully managed SaaS offering is available instantly, or you can self host Upbound in your own on-prem environment or private cloud.

Security Out of the Box

Upbound is built for Enterprise-grade security and governance with features including SSO, shared secret stores, and integrated backups.

Console Tuned for Crossplane

Upbound Console delivers an industry-leading management and diagnostic experience tuned for interacting with control planes. It is available in our SaaS offering or connectable to your self-hosted Upbound deployment.

THE INVENTORS OF CROSSPLANE

Upbound invented the popular open-source project, Crossplane. With over 9,000 GitHub stars and over 10,000 Slack members, Crossplane is a framework for building cloud native control planes without needing to write code. Upbound democratized control plane technology with the Crossplane project, and continues to drive it forward as maintainers and contributors.

LET'S CHAT

Level up your organization's cloud computing journey with Upbound and get on the fastest path to deploying Crossplane into production. Sign up for a free trial here!
