

SUSTAINABLE DEVELOPMENT GOALS

7 AFFORDABLE AND
CLEAN ENERGY

Device charger modules With solar panels

Universidad Peruana de Ciencias Aplicadas (UPC) aims to make good use of energy. Therefore, it has installed solar modules so that students, guests, teachers, and administrative staff can charge their phones, tablets, or iPads using clean energy. There are two modules installed on each campus.

Solar panels

UPC makes good use of energy through solar panels installed in our campus located in the district of Chorrillos (Villa Campus). The solar panels are used specifically to heat the semi-Olympic 8-lane swimming pool and to provide electricity for the athletes' dressing rooms.

Timer system in parking lots

During 2020, we continued to manage the best use of our energy resources. Thus, wireless light sensors are used in the parking lot of Villa Campus. These are motion-activated for 5 minutes and then switch off automatically. This saves energy when there are no nearby users.
