

SERIES 7

TRACKLESS VEHICLES LEAF LOADER

A municipal leaf collection program is a great service to offer residents but it can also be an expensive venture. The Trackless Leaf Loader is an advanced and efficient leaf loading attachment whereby leaves are picked up curbside, mulched and blown into a truck ready to be taken offsite.

Heavier Loads & Fewer Trips

Loose leaves are reduced in volume by way of our mulching process. This means that far more material can fit into the truck resulting in fewer trips to the collection centre. Even though leaves represent up to 20% of municipal solid wastes, states such as Jersey and many communities have banned leaf disposal through landfills or incineration. As others follow, mulching and/or composting will soon become mandatory as the first step in leaf disposal or recycling.

Reduce Labour, Increase Comfort

The enclosed heated cab of the Trackless MT provides the operator a safe and comfortable working environment out of any inclement weather conditions. Rain, snow or cold weather won't affect your operator or the Leaf Loader's ability to pick up leaves even if they are stuck or frozen to the pavement.
