Flexible strength.

GORE® VIABAHN® VBX Balloon Expandable Endoprosthesis (VBX Stent Graft) offers precise delivery and positive outcomes in complex aortoiliac applications.\(^*\),\(^1\)

**Iliac occlusive disease**

*Left: Tapered stent conformability
Right: Kissing stent*
100% stent delivery
0 stent dislodgement, including 18% that were contralateral deliveries.¹

100% restoration of lumen diameter
≤ 30% residual stenosis due to high radial strength, even in highly calcified and non-compliant lesions.¹

Proven success.

100% maintenance of stent length
Median length change was 0 mm, pre-deployed to final implant.¹

96.9% primary patency
In TASC II C & D lesions 95.3% primary patency.¹
Advanced technology and unique design

Independent stainless steel rings enhance flexibility
- Minimizes foreshortening
- Provides high radial strength

Semi-compliant covered balloon
- Enables diameter customization
- Improves device retention and trackability in tortuous anatomies

CBAS Heparin Surface for lasting thromboresistance**
- Proven, lasting heparin bonding technology designed to resist thrombus formation
- End-point covalent bonding keeps heparin anchored to the stent graft surface, while the bioactive site remains free to interact with the blood to prevent clotting

Expanded range of diameters and lengths
- From 5 to 16 mm diameters†
- From 15 to 79 mm crimped stent length

Proven leader with 20 years of peripheral stent graft clinical experience
- Leverages the covered stent technology of GORE® VIABAHN® Endoprosthesis
