PERFORMANCE

GORE
VIATORR
TIPS ENDOPROSTHESIS

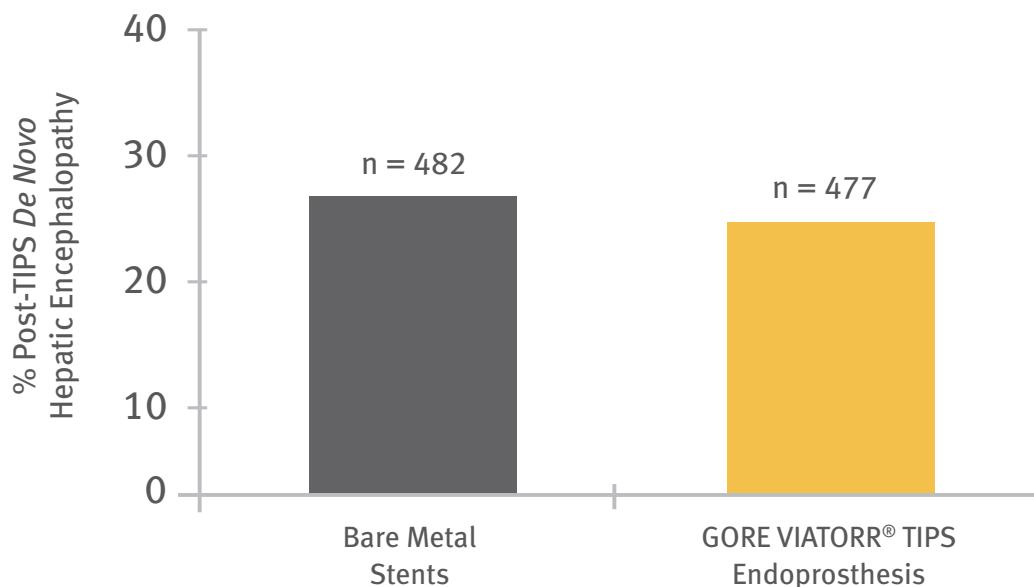

For your patients with portal hypertension, the GORE VIATORR® TIPS Endoprosthesis maintains significantly increased patency compared to bare metal stent alternatives. Highly effective in lowering portal pressure gradients in patients with refractory ascites and variceal bleeding, the GORE VIATORR® TIPS Endoprosthesis effectively treats patients over a longer period of time.

Two clinical studies were conducted in the United States to evaluate the GORE VIATORR® TIPS Endoprosthesis for use in *de novo* TIPS and TIPS revision. These studies demonstrated that primary patency of the GORE VIATORR® Device group was superior to that of the WALLSTENT® Device group ($p < 0.001$) at six months, with no significant differences in mortality or risk of encephalopathy*. Independent research since commercialization has yielded results that complement these original studies**.

Consult Instructions for Use

Indications for Use: The GORE VIATORR® TIPS Endoprosthesis is indicated for use in the *de novo* and revision treatment of portal hypertension and its complications such as variceal bleeding, gastropathy, refractory ascites, and / or hepatic hydrothorax. Refer to *Instructions for Use* at goremedical.com for a complete description of all contraindications, warnings, precautions and adverse events. Rx Only
