# LIGHTING

## Services

It's All  
in the  
Planning.

Werner Electric's lighting specialist will visit your site during the planning stages of your lighting project to learn more about your needs. Recommendations will be made based on the results of this visit. If you are updating an old lighting system, our specialist will take light output readings to ensure your new light levels are appropriate for your location. For new projects, correct light levels are an inherent part of the design. AutoCAD drawings of the building or outdoor area can be used as the basis for the new lighting project. The new lighting drawings can simply be added to the building's set of blueprints.

Werner Electric's lighting department will create a lighting layout that implements cost-effective lighting techniques and energy efficient products. These products will save you money that would otherwise be spent on energy consumption. We will then create a project quotation based on this layout which you can compare with your budget.

Our staff is in constant communication with you throughout the lighting project to make sure you are satisfied with the final solution. It is part of our commitment to quality service!

## AutoCAD Capabilities Streamlining the Process

Werner Electric's Lighting Department can seamlessly and cost-effectively combine new lighting layouts with existing structural drawings using AutoCAD. We can import electronic files of your building's layout into AutoCAD and use these plans as the template to create your new lighting layout. As a result you don't have to keep track of several different sets of plans and you don't have to waste time and money making extra copies. Similarly, we can place your lighting layout over the top of your new construction drawings without extra effort or expense on your part.

## Lighting Design Services

- Specialists knowledgeable in State Lighting Codes
- Expertise in occupancy sensors
- Skilled application of exit and emergency fixtures
- Complete energy audit capabilities
- Dedicated project coordination team
- Quotations provided on design/builds and public bid jobs

## Project Coordination

Werner Electric Supply offers complete coordination of your lighting projects. A coordinator is assigned to your lighting project to handle the details, including:

- Confirm P.O., Bill of Materials, and Terms and Conditions
- Enter orders with manufacturers
- Track and expedite orders
- Send weekly status/expedite reports of products on order
- Prepare shop drawings and submittals
- Prepare O & M's if necessary
- Price and implement all change orders and reconcile billings
- Coordinate replacements for damaged or defective fixtures and lamps

We have an entire team of project coordinators. If your assigned coordinator is unavailable one of the others can step in and assist. Project documentation is accessible to our entire team, so they are *all* able to provide the information you need. We carefully track the progress of your project, and we work diligently to keep you informed of any problems or delays. When your workforce is on hand, but your materials are not, you may be wasting money. We work to make sure you don't find yourself in that situation.
