

Instructor-Led Training

Our training courses are taught by certified Werner Electric Supply instructors — experienced teachers and experts in their fields. Our courses are tailored in scope and content to meet the needs of our attendees. Many courses are approved for CEU credit in Wisconsin.

Curriculum

You will find that our classes consist of three categories: Basics and Troubleshooting, Foundations and Advanced.

- Basics and Troubleshooting: One full day of training for beginners
 or as a refresher. Learn skills to troubleshoot and maintain
 automation equipment such as connectivity, basic software
 skills, cross-referencing, locating faults and finding diagnostic
 information. This is not a prerequisite for any other class.
- Foundations: Covers the most important concepts for a solid knowledge base – including all material in the Basics & Troubleshooting course.
- Advanced: Provides details on in-depth programming, design, best practices and integration.

Custom Training

Werner Electric Supply can create custom training to fit your needs either on-site or at any of our training facilities. Whether you need an introduction to new hardware, a refresher or a combination of training topics that fit your employee needs, we will work with your team to develop a curriculum to suit your specific requirements.

Contact Information

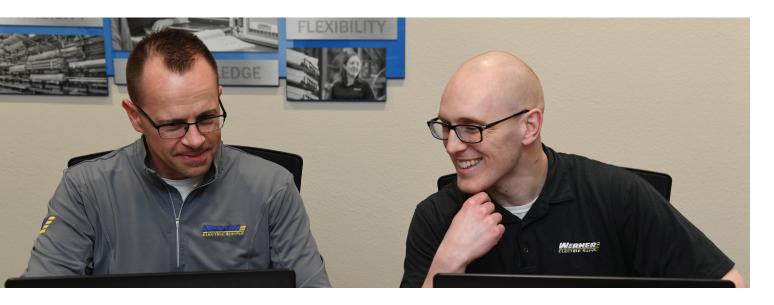

Questions about these courses, need more information or interested in setting up a custom training at your location?
