

Condensate Neutralizer TH-NT01

The Takagi TH-NT01 neutralizer assembly is an in-line cartridge containing a blend of medias designed to neutralize the acidic condensation discharge from the new high efficiency condensing tankless water heaters.

High efficiency condensing tankless water heaters cool the exhaust before leaving the heater, this results in condensation being created. This condensation is high purity water which is naturally acidic.

This unit provides an environmentally responsible solution when local codes require neutralization of the condensate prior to discharge to a drain, septic system, sewer or landscaping.

It also allows the consumer a way to prevent premature deterioration or damage to cast iron pipe, ABS pipe, septic tanks, plants, concrete and many other materials that may come into contact with the condensate discharge.

Features

- Simple, effective and environmentally friendly
- Designed specifically for Takagi Condensing T-H2-OS/DV tankless water heaters
- Comes complete with fittings ready to install
- Compact & visually pleasing design
- Replace every 3 years or when the PH moves below 6.0
- Unit can be disposed of with the household trash

Specifications

12" long x 2.5" round

3/8" FPT inlet & outlet

Flow 3 gph gravity flow (14.4 L/Hour)

Temperature range 40-100° F (4.4 – 37.8 c)

Max pressure 125 psi (8.6 bars)
