DESCRIPTION

The Apollo® 40-200-TKU test kit is suitable for testing all reduced-pressure principle, double check, spill-resistant vacuum breaker, and pressure-type vacuum breaker backflow preventers.

The test kit includes three soft-seated needle valves with replaceable seats, a differential pressure gauge, a thermoplastic gauge body, color-coded hoses with integral filters, a line-pressure gauge, all required adapter fittings, a flexible strap, laminated test procedures, and a durable carrying case with foam inserts and external storage compartments. The kit is suitable for pressures up to 200 psig and a maximum temperature of 150°F. The gauge has a dual scale differential pressure range of 0-15 psid/0-100kPa with +/- 0.2 psid accuracy (descending).

The 40-200-TK5U is identical to the three-valve test kit except that it has two additional soft-seated needle valves and a bleed tube that make it possible to bleed lines without disconnecting hoses.

FEATURES

- Soft-seated needle valves with replaceable seats
- Dual-scale differential pressure gauge with ± 0.2 psid accuracy (descending)
- Thermoplastic gauge body
- Additional line pressure gauge
- Color-coded hoses with integral filters
- Three sets of adapter fittings
- Adjustable nylon strap
- Laminated test procedures (Also available on www.apollovalves.com)
- Heavy-duty carrying case with external storage compartments
- Corrosion resistant
- Portable
- Lightweight
- **MADE IN THE USA**

APPROVALS

The Apollo® 40-200-TKU and 40-200-TK5U are recognized by the Foundation for Cross-Connection Control and Hydraulic Research at the University of Southern California as acceptable under the general guidelines of the Foundation's manual (10th Edition).
