## Get to Know H<sub>2</sub>Okinetic™ Technology.

We've prepared this communication guide to provide you with a brief overview of Delta's revolutionary shower innovation: H<sub>2</sub>Okinetic Technology.

This piece is not intended to be used as product literature; rather it's been designed to give you an overview about this technology, its positioning and the marketing materials and sales tools available for you to use.

Please note that this guide is for **internal use only**. Please do not distribute or share it with anyone outside of the organization.

### Why H<sub>2</sub>Okinetic Technology was created.

At Delta®, we're committed to providing better ways to use water. That's why when we created H<sub>2</sub>Okinetic Technology, we designed it to be incredibly efficient, without sacrificing experience.

In fact, the H<sub>2</sub>Okinetic shower experience is quite revolutionary on its own. Larger water droplets move in a unique wave pattern, providing warmer, more drenching coverage.

It's the feeling of more water, without using more water.

### How H<sub>2</sub>Okinetic Showers work.

H<sub>2</sub>Okinetic Showers look different, because they are different. The result of extensive research and development, H<sub>2</sub>Okinetic Showers harness the natural energy of water unlike any shower has before.

Inside the showerhead, water is channeled through a series of strategically placed, highly engineered chambers. The chambers create velocity and sculpt the water into a unique wave pattern that blankets the body with coverage. And all this happens without any internal moving parts that could break or degrade over time.

### Results you can see. And feel.

H<sub>2</sub>Okinetic Showers provide 3X the coverage of a standard shower.\*

Standard

MORE COVERAGE

Larger water droplets and a dense shower spray pattern result in a warmer shower experience.

MORE WARMTH

The unique wave pattern and velocity of the water create the feeling of more pressure.

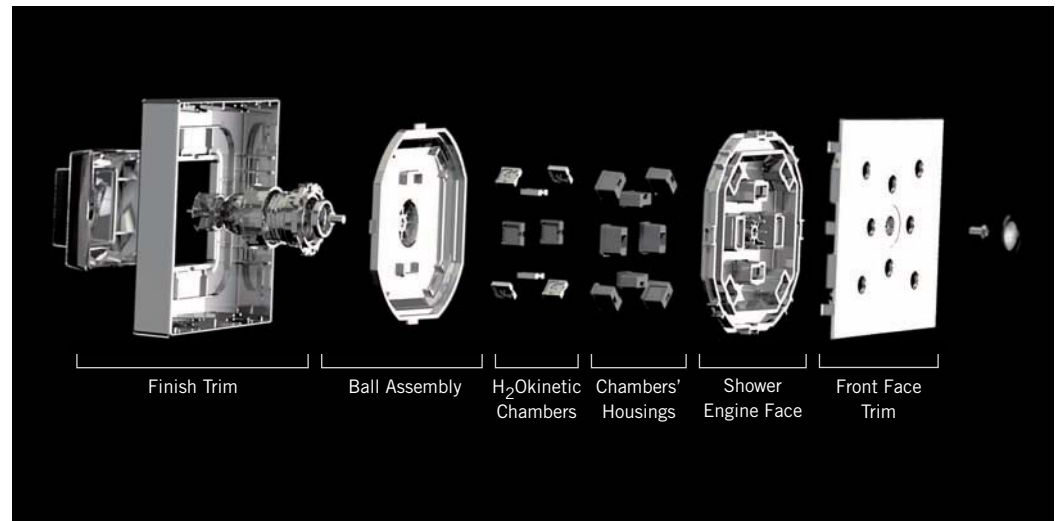

MORE INTENSITY

\*Coverage measured in accordance with EPA Watersense® Specification for Showerheads, March 4, 2010.

### How H<sub>2</sub>Okinetic Showers work.

### CONTROLLING THE WAY THE WATER MOVES.

Water enters the chamber and flows through highly engineered channels, which control the shape, size and velocity of the water droplets.

At the bottom of the chamber, the water forms vortices.

The vortices allow water to exit the showerhead in an oscillating pattern.
