Description

The supply manifold comes preassembled with a 1" FNPT isolation valve and hose bib/air vent. A valve provides flow balancing for each loop.

The return module comes preassembled with a 1" FNPT isolation valve and hose bib/air vent. A valve provides flow balancing and on/off manual control to allow isolation of individual loops for each loop. The valve accepts optional actuators for automated control. Two metal mounting brackets are included.

Dimension A:

Width dimensions in table do not include isolation valve, zone valve, or necessary fittings for connection.

Dimension B:

Allow for a minimum of 6" (150 mm) clearance from top of manifold to frame opening for StatLink® Module rough in.

Dimension C:

Allow for a minimum of 6" (150 mm) clearance from the supply/return end connections to the side frame for supply/return piping that turns up or down. If straight supply/return piping is used, allow for a minimum of 12" (300 mm) or if zone valves are used, a minimum of 18" (450 mm). Be aware that the minimum distance will vary according to the supply/return piping arrangement.
