INSTALLATION — TOOLS NEEDED:

Two (2) pipe wrenches, pipe dope, assorted fittings and lengths of 1" pipe.

STEP 1 - Determine Location of the Feeder

- The feeder is usually mounted one-third (1/3) of the way up from the bottom of the tank. This provides two-thirds (2/3) of the tank for return condensate.

STEP 2 - Installation of Model 25A

- a. Follow the diagram to the right for piping the feeder to the tank and water supply. Remember to leave room for servicing the water feeder.
- The discharge piping should be connected to the top of the tank. The height of the discharge piping should be as short as possible and use minimum amount of fittings.
 - An air break can be used if code mandates one.
 - There is not a positive seal between the valve and the float chamber. If too much back pressure is developed, the water from the valve will go into the float chamber.
 - At all right angle turns in the equalizing piping, crosses should be used to facilitate inspection and cleaning.
