Backlit Panels

NEW! - THE BACKLIT ADVANTAGE

The achilles heel of edge-lit panels is the Light Guide Plate (LGP). Although CSC LED uses the highest quality LGP's from Mitsubishi, other manufacturers use a polymer material that will yellow over time.

Recent breakthroughs in LED chip lensing have now made the back-lit panel possible with even lower costs while preserving the slim form factor. Backlit panels do not require the expensive and sometimes problematic LGP and are virtually indistinguishable from their edge-lit predecessors when installed.
