

## ESBE Series VRG 3 & 4-Way Mixing & Diverting Valves

### Applications:

The ESBE VRG series of 3 & 4-way valves are designed to mix water to the appropriate temperature to meet the zone or system requirements within heating and cooling systems.

The redesigned VRG valve replaces the MG and G series of rotary valves providing additional operational features. By either mixing or diverting, the fluid temperature leaving the valve is regulated by the VRG in either a manual operation or automatically when coupled with the ARA600 Series or 90 Series electronic motor actuator. These actuators are typically connected to an outdoor reset controller, DDC system or boilers with integrated controls.

### Features:

- VRG series valves are a rotary design allowing for great flexibility in field piping layout
- Compact valve size
- Exceptionally low internal leakage rate
- Visible position indicator and knob
- Easily adaptable with ESBE electronic motor actuator styles ARA600 or series 90
- Suitable fluid: water (maximum 50% glycol) for closed loop heating or chilled systems

### Ordering Information:

#### 3-Way Valve, Series 131

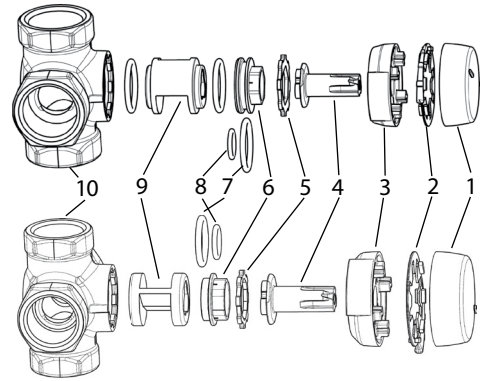

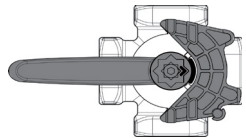

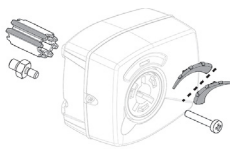

Code No.	Size	Connection	Cv <sup>1</sup>	Replaces

	Code No.	Part #'s	Description
	<b>17006940</b>	1 & 2	VRG valve knob & scale
	<b>17006900</b>	3, 4, 6 & 8	Valve shaft & seal kit, 1/2" & 3/4" 3 & 4-way
	<b>17006910</b>	3, 4, 6 & 8	Valve shaft & seal kit, 1" 3 & 4-way
	<b>17006920</b>	3, 4, 6 & 8	Valve shaft & seal kit, 1-1/2" & 1-1/4" 3 & 4-way
	<b>17006930</b>	3, 4, 6 & 8	Valve shaft & seal kit, 2" 3 & 4-way
	<b>193B1616</b>	-	VRG mounting kit for Series 90 actuator
	<b>16000500</b>	-	ARA600 motor series mounting kit (contains drive sleeve, pin, rotation indicator & mounting screw)

**Technical Specifications:**

<b>Max. operating pressure</b>	145psi (10 bar)	
<b>Max. operating temperature</b>	230°F (110°C)	
<b>Min. operating temperature</b>	-15°F (-10°C)	
<b>Max. differential pressure</b>	3-way	4-way
	Mixing: 14.5 psi (1bar) Diverting: 20psi (2bar)	14.5psi (1bar)
<b>Leakage in % of flow</b> (based on diff. pressure of 14.5psi (1 bar))	Mixing: <0.05% Diverting: <0.02%	<1.0%
<b>Max. torque</b>	<44lbf·in (<5Nm)	
<b>Allowable fluid</b>	1) Water, 2) Glycol mixture, max. 50%	

**Pressure Drop Graph:**

**Flow Characteristics:**

**Piping Arrangement:**

**3-Way valves**

- Ideal valves for mixing and diverting applications
- Reduces risk of low temperature water returning to boiler

**4-Way valves**

- Double mixing function, providing proportional mixing from source to system to source
- Reduces risk of low temperature water returning to boiler

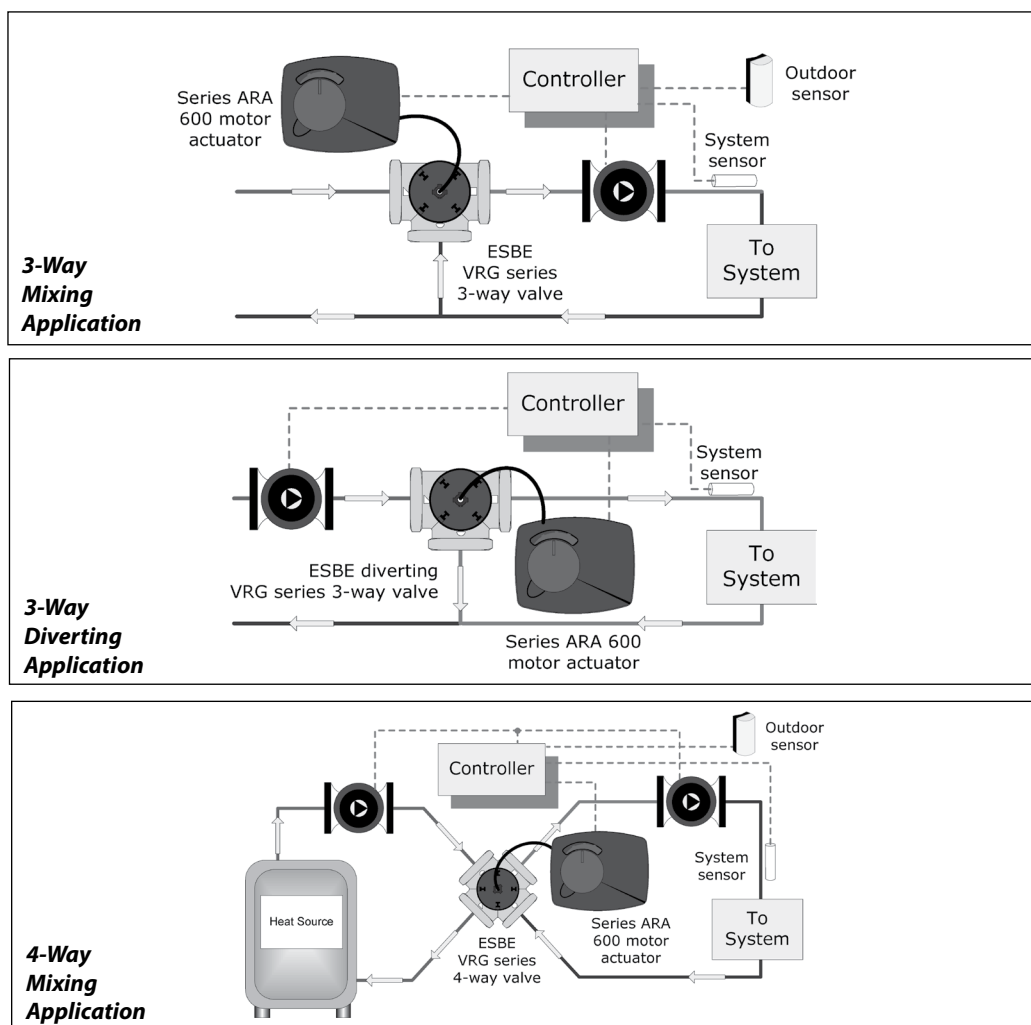

Each port of the VRG valve is stamped with an identifiable shape. These distinct stamped shapes provide a reference during the installation and trouble shooting of the valve.

**Valve Position:**

Located on the stem of the VRG is a position indicator in the shape of an arrow. This arrow correlates to the orientation of the internals of the valve. Depending on the required 90° travel of

the valve from port to port, the setting indicator can be installed to reflect the direction of travel.

**Typical Installation:**
