SKV50 SEWAGE EJECTOR

Wholesale Products Page: 6280-1

Dated: June 2011

RPM: 1650 Discharge: 2" Solids: 2"

The curves reflect maximum performance characteristics without exceeding full load (Nameplate) horsepower. All pumps have a service factor of 1.2. Operation is recommended in the bounded area with operational point within the curve limit. Performance curves are based on actual tests with clear water at 70° F. and 1280 feet site elevation.

## MODEL: SKV40 Physical Data

DISCHARGE SIZE	2"
SOLIDS SIZE	2"
IMPELLER TYPE	RECESSED VORTEX
CABLE LENGTH	10' STANDARD 20' OPTIONAL
PAINT	PAINTED AFTER ASSEMBLY, DARK GREEN, WATER REDUCIBLE ENAMEL, ONE COAT, AIR DRIED.

#### **Temperature**

MAXIMUM LIQUID	140°F
MAXIMUM STATOR	-
OIL FLASH POINT	-

#### **Technical Data**

POWER CORD TYPE		SJTW
MATERIALS OF CONSTRUCTION	MOTOR HOUSING	CAST IRON
	CASING	CAST IRON
	IMPELLER	THERMOPLASTIC
	MOTOR SHAFT	STAINLESS STEEL
	HARDWARE	STAINLESS STEEL
	"0" RINGS	BUNA-N
MECHANICAL SEALS		
Standard:		CARBON / CERAMIC
UPPER BEARING		SLEEVE
LOWER BEARING		SINGLE ROW-BALL

3.01

Contractor shall furnish all labor (Qty.) submersible centrifugal se this specification is the SKV50. T manufactured by Hydromatic Pu	wage ejector   he pump furn	pump(s) as spec	ified herein. The p	ump model covered in
DESIGN CONDITIONS				
Each pump shall be rated at RPM.	H.P.,	volts,	phase,	hertz and operate
OPERATING CONDITIONS				
The pump shall deliver The curve submitted for approva				

#### 4.01 **CONSTRUCTION**

Each pump shall be of the sealed submersible type, incorporating features normally found in pumps furnished for the residential market.

These features include:

capability, amp rating, and design impeller diameter.

- 1. The pump inlet shall be open and clear, without screening to provide access for sewage and solids.
- 2. All external mating parts shall be machined and Buna N, O-Ring sealed.
- 3. All fasteners exposed to the pumped liquid shall be 300 series stainless steel.
- 4. All power cords shall be water resistant UL or CSA approved, with double insulation, and sized as a function of Amp. draw.

#### 5.01 MOTOR AND SHAFT

The stator, rotor and bearings shall be mounted in a sealed submersible type housing. Single phase motors shall be permanently split capacitor. Full Load and Locked Rotor Amps. as well as Start and Run winding resistance shall be tabulated for each pump.

#### 6.01 **BEARINGS, SHAFT AND MECHANICAL SEAL**

An upper sleeve and lower thrust bearing shall be required. The lower bearing shall be heavy duty single row ball bearing which is permanently and continuously lubricated and cooled by the dielectric oil which fills the motor housing. The motor shaft shall be stainless steel and sealed from the pumped liquid with a carbon ceramic mechanical seal.

#### **SPECIFICATION DATA**

Dated: June 2011

#### 7.01 **IMPELLER**

The Impeller shall be thermoplastic, ten vane, vortex design with pump out vanes on the back side. These vanes wash out grit and stringy material that will damage the shaft and mechanical seal.

#### 8.01 AUTOMATIC CONTROL

All single phase pumps should be capable of automatic operation.

#### 9.01 PRESSURE SWITCH

The single phase pumps are furnished with a pressure diaphragm switch that features a piggy-back plug that allows the pump to be operated manually without removal from the sump.

#### 10.01 FLOAT SWITCH

The SKV50 pump is supplied with a tilt-sensitive wide-angle float switch which is sealed in a non-corrosive PVC enclosure. The unit is UL listed for water and sewage and CSA certified. The float switch shall also be fitted with a piggy-back plug that allows the pump to be operated manually without removal from the sump.

#### 11.01 MANUAL CONTROL

The Single Phase pumps are not supplied with any type of automatic control. A wide angle piggy-back float switch can be supplied and fitted to these pumps.

#### 12.01 **PAINTING**

All cast iron parts shall be painted before assembly with a water reducible alkyd air dried enamel. The paint shall be applied in one coat with a minimum thickness of 3 to 4 mils.

#### 13.01 **TESTING**

All pumps shall be individually tested to include the following:

- 1. The pump and power cord shall be visually inspected for imperfections, cuts or nicks.
- 2. The pump shall have a ground continuity check and the motor chamber shall be Hi-potted to test for moisture content and/or insulation defects.
- 3. The motor and volute housing shall be pressurized and a 10 second air leak decay test run.
- 4. Oil is added, and the pump is run. Voltage and current are monitored visually, electronically, and the tester listens for any noise or malfunction.
