RE: NE21 – Catalogue update

NESCO INC. is a Canadian Corporation that manufactures and distributes electrical conduits and fittings to Electrical Wholesalers across Canada. Our manufacturing, warehouse and distribution facility in Mississauga, Ontario is close to major transportation routes eastbound, westbound and all points within Ontario.

Products we manufacture include:

- Flexible Aluminum Conduit & LT Conduit
- EMT Elbows
- Rigid Elbows
- Rigid Conduit Nipples
- Steel Cover Plates
- Custom PVC Junction Boxes
- Ground Plates

Our product line continues to grow as our customers realize the need for a well-stocked and competitive source on conduit & fittings. The extensive inventory held at our Mississauga location ensures that most orders are shipped complete the same day the order is placed.

Quality products and exceptional customer service differentiate Nesco from competing suppliers. Please call us at **1 (866) 446-3726** (toll free) if you have any questions regarding our product line, require any product samples, or would like to place an order!

STRUT SLOTTED & SOLID

Pre-Galvanized Steel Strut

NESCO now offers a line of pre-galvanized 10' lengths of strut in both solid and half-slot in 1-5/8" and 1" depths.

Manufactured from pre-galvanized 12 gauge steel, Nesco strut supports are commonly used for metal framing, ceiling grids, pipe racks, conduit, duct and cable tray supports.

NESCO offers custom cut-to-length options on all strut types. Please call for a quote.

The Raintight Difference:

Listing agencies recently implemented a specification revision that caused industry standard split ring compression connectors to be incapable of passing raintight testing. Bridgeport solved this issue by developing a patented EMT rain tight design and became the industry's first manufacturer to meet the more stringent raintight listing requirements, ensuring their products consistently and effectively excluded water. This allowed Bridgeport to mark their fittings "RAINTIGHT".

Nesco inventories raintight fittings in both steel and zinc die cast material from 1/2" - 4" trade size.

Mighty-Seal Raintight Reducing Sealing Washers

Maintains NEMA 3R rating on listed enclosures. Includes one coated and one uncoated washer. Coated washer installs on the exterior of the box.

Raintight LB & LLR

Bridgeport's LB-RT and LLR-RT Conduit Bodies with Integral Raintight Connectors allow access to the interior of a conduit system for inspection, pulling and maintenance. Integral raintight connectors eliminate the need to thread connectors into a conduit body entry. These conduit bodies come with stainless steel screws, an aluminum cover, and a neoprene gasket.

Ahead of the Curve!

Unlike traditional LBs that have a sharp 90-degree corner, Smart LB conduit bodies have a built-in radius that helps prevent cables from getting caught or damaged when pulled around corners. With no sharp edges to damage cable, the gentle bend radius meets ANSI/TIA/EIA 568 & NECA/FOA requirements for pulling optical fiber and twisted pair cable. Smart LBs are the only conduit bodies that are recommended by the BICSI TDMM 13th for telecommunication cable. Includes a gasketed cover for wet locations.

Everything you didn't know you needed to know about bending

BEND RADIUS is the measurement of the inside curvature of a cable.

In fiber optic transmissions, **MACRO BEND** is a large visible bend in the fiber that can cause extrinsic attenuation (a reduction of the optical power in the glass). This means that light actually leaks out of the fiber when it is bent; as the bend becomes more acute, more light leaks out.

SmartLB

Why not a **[standard] conduit body?**

Telecommunication cable is not only expensive but it is also temperamental and fragile. Once a cable has been installed exceeding its bend radius it will not perform to its maximum potential. Bending a cable past its recommended bend radius causes macro bending, a fatal condition that can cause a significant loss in performance. Smart LB is the **ONLY** conduit body specifically recommended by the BICSI TDM 13th for use with telecommunication cable. Conduit bodies designed for use with electrical wiring systems are not recommended for use with telecommunication cabling because they do not guarantee a correct bend radius.

Why is the **[bend radius]** of telecommunication cable so important?

Think of telecommunication cable like a garden hose, the cable is the hose and the data is the water. The more you bend the hose (or shrink the bend radius) the less water will travel through the hose. This is the same in telecommunication cable, the smaller the bend radius the more likely the cable will have macro bending. This is not limited to fiber optic only. With twisted pair cable excessive bending can disturb the critical geometry of the twists, reducing performance through increased sensitivity to external noise and increased near-end crosstalk within the cable. In addition, long-term damage to the cable jacketing and insulating material can result from excess bending stress.

STEEL EMT SLIP COUPLINGS

WHAT MAKES IT DIFFERENT?

- ⇒ Use in limited space applications
- ⇒ Save time joining racked runs
