

StreamLabs[®]

CONTROL

**Real-time leak prevention,
complete peace of mind**

24/7 Leak Protection

StreamLabs® helps protect homes from costly water damage caused by leaks. The StreamLabs app provides real-time insights on your water system and the option to remotely shut it off in the event of a leak, while also allowing you to monitor water consumption.

As part of the RWC family of brands—which includes industry-leading brands like SharkBite®, HoldRite®, Cash Acme® and John Guest® — StreamLabs is the result of a long history of innovative and transformative technologies from a global leader in pipe, valve and fitting manufacturing.

RWC

Why install a StreamLabs Control?

Water damage is
10X
more likely than
fire damage

40% of homeowners
have experienced water damage,
with the average claim being
more than **\$9,000**

12% of water entering homes is wasted
due to leaks. That's a daily average of

17 gallons

The StreamLabs Control helps protect the home from leaks
and wasted water to provide peace of mind at all times.

24/7 
leak protection
with automatic, manual
and remote shut-off
functionality via the free
StreamLabs app

Save up to
10% annually
on your homeowners
insurance policy*

*Please contact insurance carrier for eligibility.

The most costly
leaks are from:

48%
Toilet

15%
Broken Pipes

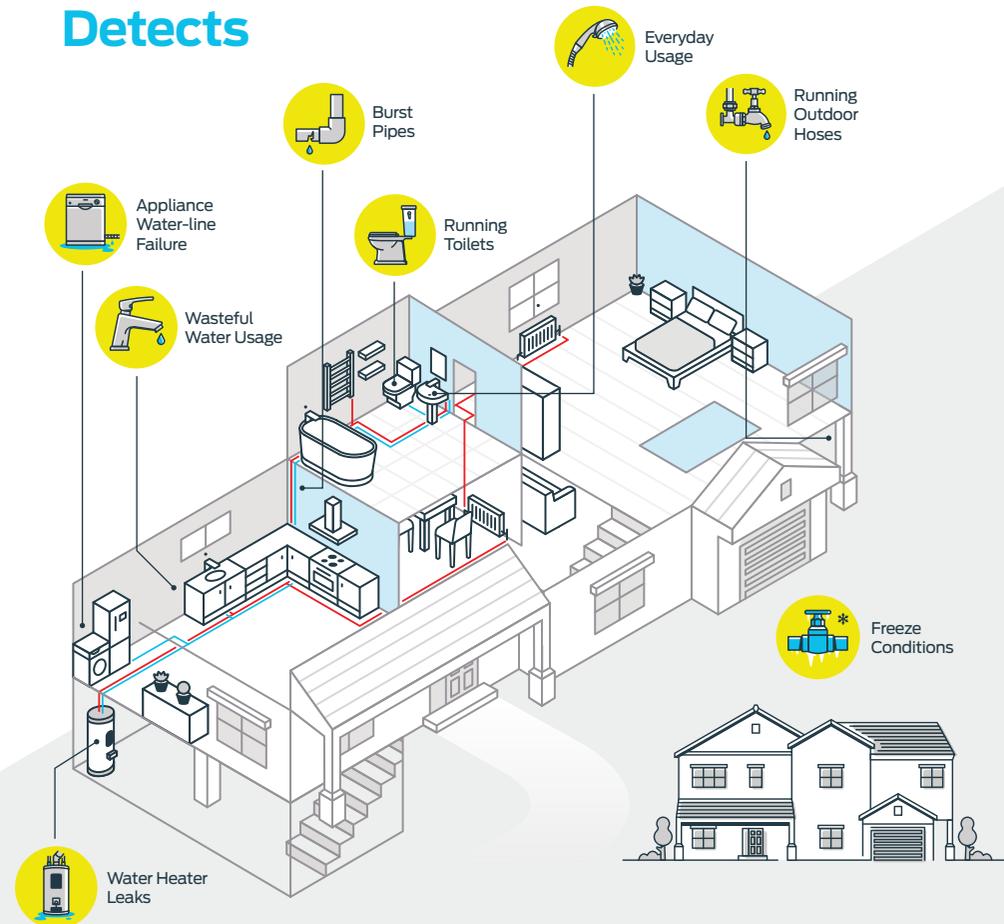

10%
Faucet

Protect. Save. Control.

Feel at ease whether you're at home or away. The StreamLabs Control uses ultrasonic technology for live water monitoring, leak detection and automatic shut-off through the free StreamLabs app.

Protect your home from water leaks
Save money on insurance and monthly water bills
Control water usage and efficiency in your home

StreamLabs Detects

Catch and control water issues. Anytime, anywhere.

Get alerts to your phone instantly if a leak is detected, and use the remote shut-off feature to stop leaks in their tracks. You can also view live and historical water usage. Everything you need to control your home's water system is in the palm of your hands.

Home & Away

Protect yourself while away or home by putting the Control in Away Mode. While in Away mode, the Control will alert and automatically shut the water off if a leak is detected. Home mode uses your normal leak detection settings.

Intelligent Leak Detection

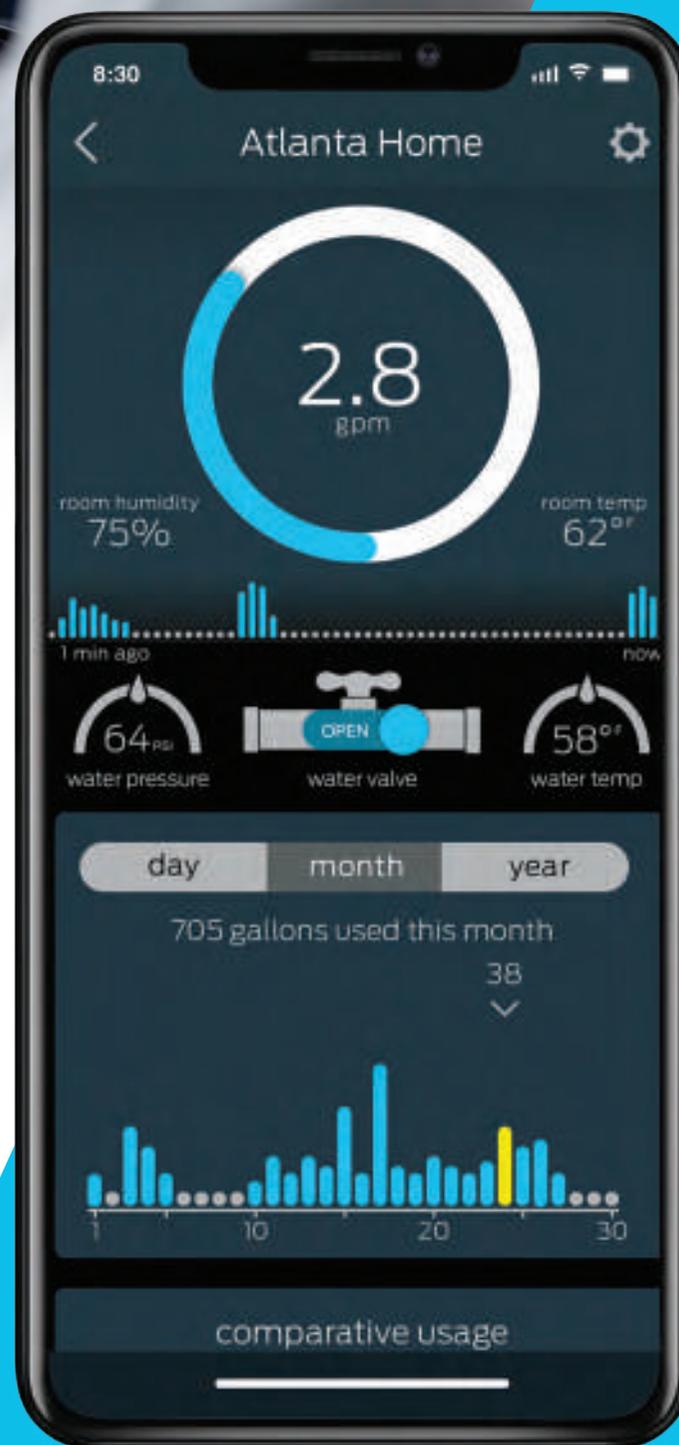

While in Home mode, Smart Alerts™ allows your device to learn your unique water usage patterns so it can send notifications when it detects abnormal use.

Smart Home Compatibility

The Control integrates with Amazon Alexa and the Google Assistant™ so you can ask your smart home device about water usage, tell it to change between Home and Away modes and more.

Multiple Locations, One App

Protect and control water in second homes or vacation properties.

Stay ahead of leaks with real-time alerts

Leak Alerts

You'll receive notifications for both slow leaks and major leaks, which are based on flow rate thresholds. Drip Detect™ technology identifies small leaks or drips that can happen behind the wall and cause mold and water damage.

Pressure Alerts

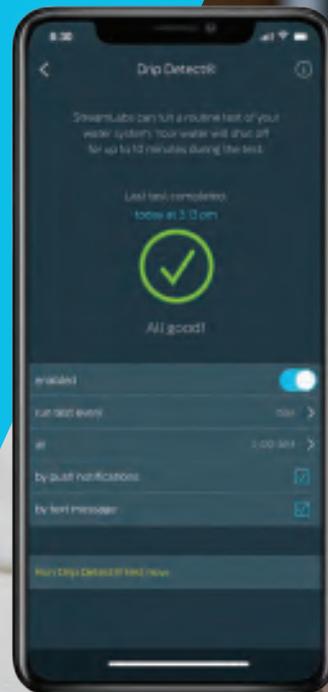

Receive alerts of high water pressure that can lead to appliance connection failures, or receive alerts of low pressure caused by a major leak outside of the home.

Freeze Alerts

To help prevent frozen and burst pipes, the app will tell you if the air around your Control or the water in your pipes is close to freezing temperatures.

Custom Alerts

You can adjust the minimums and maximums for different alert types so they better align with your lifestyle.

Advanced ultrasonic technology measures water flow.

The StreamLabs Control is a whole-home smart water leak detection device that uses ultrasonic technology to detect leaks as small as 0.1 gpm. The Control pairs to your Wi-Fi network to provide real-time water usage and other alerts such as pressure, temperature and humidity to provide a healthy and well-protected home. The Control has a brass full-flow valve with a stainless steel ball valve and performs monthly valve checks for continuous long-term operation and reliability. It comes with a two-year warranty that is extended to four years when installed by a StreamLabs PRO contractor.

Available Connections

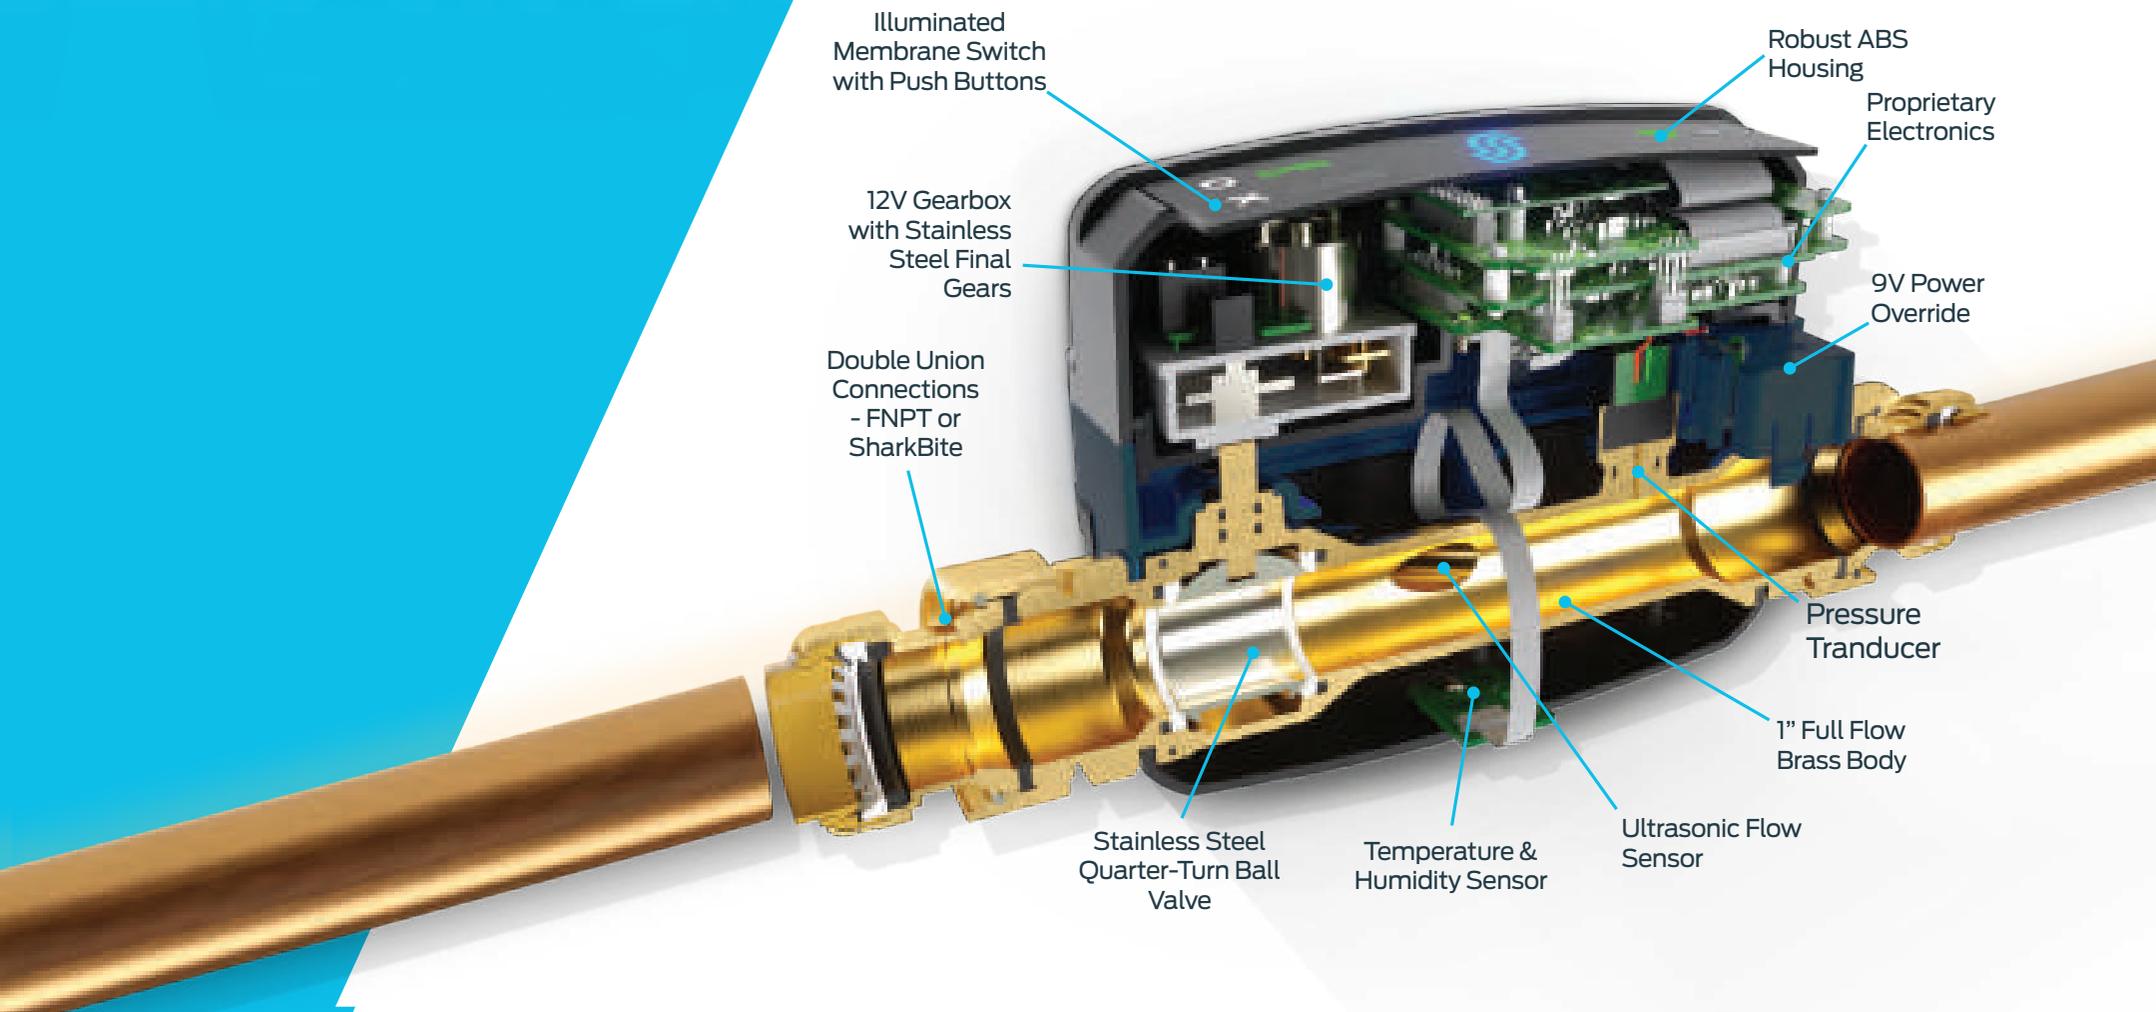

SharkBite	3/4"	1"	1-1/4"
FNPT	3/4"	1"	1-1/4"
SWT		1"
