* Some limitations apply. Contact IPEX for details.

FOOTNOTES:

P = Permitted, N = Not Permitted

- Combustible piping in noncombustible construction is subject to the requirements of 3.1.5.16.(1) of the NBC 2015.
- Combustible piping that penetrates a fire separation is subject to the requirements in articles 3.1.9.1, 3.10.9.6 and 9.10.9.7 of the NBC 2015.
- Products may not be approved for use in a Vertical Service Space, (check the table above or contact IPEX).
- Use of pipe and fittings per the National Plumbing Code of Canada 2015 (Tables A-2.25, 2.26 and 2.27).

PROFIT FROM A NEW CONNECTION

AquaRise®
Potable
Water Piping
Systems

The cost-effective, time-saving alternative to metal systems.

AquaRise®, a nonmetallic potable water distribution system for commercial and high building construction. Based on over 15 years' experience designing and manufacturing industry-leading CPVC systems, AquaRise offers numerous benefits over metal with a system that's fully-approved for noncombustible applications.

A SOLID ALTERNATIVE TO METAL
BETTER LONG-TERM PERFORMANCE
FULLY-CERTIFIED COMPLIANCE
FULL FLAME & SMOKE LISTINGS
PERMANENT JOINING SYSTEM
PROJECT SAVINGS

Add AquaRise® to your toolbox and stay current with these proven advantages on your next project.

All you need to get started!

ipexaquarise.com

Specifiers, builders and contractors in the construction industry across Canada have made IPEX Inc. thermoplastic plumbing systems the preferred choice for their ability to outperform and outlast traditional metal systems.

Like all IPEX integrated solutions, IPEX pipe, valves and fittings are designed to function as a system, yet flexible enough to work universally with other products. Since it's built and backed by IPEX, our products come with technical support, onsite trouble-shooting if you need it and one of the best total system warranties in the business—all from one reliable supplier who stands behind you and your complete piping system.

CPVC HOT & COLD WATER DISTRIBUTION SYSTEMS

1/2" – 4" (12mm – 100mm)

AquaRISE®

While contractors and engineers have traditionally had few viable alternatives to increasingly-expensive metal for their water distribution systems, IPEX Inc. now offers a solution that ensures time and cost-savings without sacrificing the strength or performance. With AquaRise, IPEX introduces a CPVC hot and cold water distribution system that comes with reduced material costs, offers superior features and exceeds all industry testing standards.

A SOLID ALTERNATIVE TO METAL

Compare AquaRise to traditional metal systems, and AquaRise proves itself a strong, highly-engineered and affordable improvement over copper. Manufactured tough and robust, AquaRise performs as well as—and in many cases, better than—metal, offering a rugged system that exceeds all required standards. At the same time, AquaRise costs less than copper, yielding significant project savings. Thanks to its superior durability, these cost savings will pay off even more in years to come. AquaRise's corrosion resistance ensures a longer, maintenance-free life and better performance over the long-term.

PROJECT SAVINGS

IPEX created AquaRise to be a system that saves valuable time and money on the jobsite. Even greater savings can be achieved by using SDR 21 AquaRise, which is designed specifically for cold water applications. Its simple solvent cement system makes AquaRise fast and easy to assemble. No product specific training is needed, and no flames or torches are required during installation, reducing jobsite safety risks. In addition, AquaRise sweats less than metal pipe due to its excellent insulating properties. As a result, it can reduce the need for insulation, lowering overall job costs. AquaRise also represents a lower risk of jobsite theft.

Proven strength, competitive price, easy installation – what all this adds up to is significant time and cost-savings for contractors and building owners over the long term.

APPLICATIONS

- Potable Water Distribution
- Hot Water Recirculating Systems

STANDARDS

Certified to ASTM F442 and CSA B137.6

Certified to CAN/ULC-S102.2

DID YOU KNOW?

AquaRise interior and exterior walls remain smooth in virtually any service condition, unlike metal which, over time, will rust, pit, scale and corrode.

ADVANTAGES

- 1 Proven to Exceed Toughest Standards**
Thanks to its advanced materials and rugged design, AquaRise SDR 11 for hot water provides long term pressure ratings of 400 psi at 73°F (23°C) and 150 psi at 160°F (71°C). AquaRise SDR 21 for cold water use provides a long-term pressure rating of 200 psi at 73°F (23°C), meeting the requirements of CSA B137.6. AquaRise passes the punishing burst pressure tests conforming to ASTM F442.

- 2 Better Long-Term Performance**
Unlike metal piping which may pit, scale and degrade over time, AquaRise's rugged thicker walls and excellent corrosion resistance ensure years of consistent flow and maintenance-free performance, even in demanding hot water recirculation applications.

- 3 Fully-Certified**
Designed to be safely used in hot and cold water distribution systems, AquaRise is certified to the following:

- CSA B137.6 (CPVC Pipe, Tubing and Fittings for Hot and Cold Water Distribution Systems)
- NSF 61 (Potable Water Classification)
- CAN/ULC S102.2

- 4 Full Flame & Smoke Approvals**
Listed to the CAN/ULC S102.2 standard, AquaRise achieved a Flame Spread rating of not more than 25 and a Smoke Development classification of not more than 50. Unlike competitive products, AquaRise does not need insulation to achieve certification. Ideal for noncombustible applications, AquaRise is code compliant to the following sections of the National Building Code of Canada:

- High buildings as defined by NBC article 3.2.6
- Air plenums as defined by NBC article 3.6.4.3
- Noncombustible buildings as defined by NBC article 3.1.5.16

- 5 Permanent Joining System**
IPEX supplies high quality CPVC cement, primer and applicators for enabling tough, permanent welded pipe-fitting connections.

SPECIFICATIONS

AQUARISE PIPE & FITTINGS

AquaRise pipe and fittings are certified to CSA B137.6. When used in noncombustible construction, high buildings and air plenums, AquaRise pipe shall be tested and listed in accordance with CAN/ULC S102.2 and clearly marked with the certification logo indicating a Flame Spread Rating not more than 25 and a Smoke Developed Classification not exceeding 50. Pipe shall be SDR 11 or SDR 21 thickness and IPS outside diameter.

FIRESTOPPING DEVICES

Firestopping systems shall be listed under CAN/ULC S115 and tested with a pressure differential of 50 Pa. Certified firestopping devices are required whenever the system penetrates a vertical or horizontal fire separation.

ONE-STEP & TWO STEP SOLVENT CEMENTS

IPEX has made a significant change to the current solvent cement products to be used with AquaRise Domestic Water Piping. The product offering has been modified to now offer two customized solvent cements for small and large size ranges. Both products are certified to CSA B137.6, listed to NSF 61 and sold as a kit coming complete with necessary applicators and installation instructions.

PIPE DIMENSIONS AND WEIGHTS SDR 11

AquaRise pipe is produced (1/2" through 4") in SDR 11 dimensions with IPS (Iron Pipe Size) outside diameters. The SDR (Standard Dimension Ratio) value means that all sizes of pipe maintain a constant ratio between the pipe outside diameter and minimum wall thickness. This results in all diameters carrying the same pressure ratings of 400 psi at 73°F and 150 psi at 160°F.

AquaRise Pipe Dimensions & Weights IPS / SDR 11 (Imperial)

Nominal Size (Inches)	Average OD (Inches)	Average ID (Inches)	Average Wall Thickness (inches)	Weight - Empty lb/ft
1/2	0.840	0.687	0.076	0.130
3/4	1.050	0.859	0.095	0.202

65	73.0	59.7	6.6	2.26
75	88.9	72.7	8.1	3.35
100	114.3	92.3	11.0	5.55

PIPE DIMENSIONS AND WEIGHTS SDR 21

AquaRise SDR 21 pipe is produced (1-1/2" through 4") in SDR 21 dimensions with IPS (Iron Pipe Size) outside diameters. The SDR (Standard Dimension Ratio) value means that all sizes of pipe maintain a constant ratio between the pipe outside diameter and minimum wall thickness. This results in all diameters carrying the same pressure ratings of 200 psi at 73°F.

AquaRise Pipe Dimensions & Weights IPS / SDR 21 (Imperial)

PIPE-WITH-THE-STRIPE PIPING SYSTEMS

1/2" – 2" (12mm – 50mm)

Polyethylene
**Pipe with the
Stripe®**

Pipe with the Stripe is available in standard and CSA-certified polyethylene. It combines the features of flexibility, durability, light weight and ease of installation. Factors such as life expectancy and economics should be considered when selecting the appropriate product from the wide range of products offered.

ADVANTAGES

- 1 Several pressure rating options
- 2 Choice of Standard or CSA certified pipe
- 3 Convenient sequential footage marking
- 4 Our patented stripe identification system
- 5 Available in convenient coils or reels
The smooth interior of Pipe with the Stripe virtually eliminates interior scaling or deposits from aggressive water. So the water supply line stays cleaner longer – providing optimum water quality. Pipe-with-the-Stripe is also very flexible, ideal to withstand underground soil loads from frost or settlement.

APPLICATIONS

- Waterwell Tubing • Ice Skating Rinks
- Irrigation Systems
- Maple Sap Collection

STANDARDS

 CSA B137.1

DID YOU KNOW?

Asking for and installing the right pipe has never been easier. Simply mention the colour of the stripe you want. Stripes on the pipe clearly identify one from another.

Pipe Pressure Ratings		
Color	psi	kPa
Utility Black	50	345
White Stripe	75	517
* Red Stripe	75	517

GOLD901 WATER SERVICE TUBING

3/4" - 2" (20mm - 50mm)

GOLD901™

Gold901™ is a lightweight, easy to install, 250 psi rated water service tubing that can be used on both the municipal and private-side of a project.

Gold901 is manufactured to Copper Tube Size (CTS) from High-Density Polyethylene (HDPE) and is third-party certified and listed to AWWA C901, CSA B137.1, and NSF 61.

Gold901 is conveniently available in both coils and reels and is available in 3/4" to 2".

DIMENSIONS - GOLD901 TUBING

Nominal Size in	mm	Coil Length feet	Product Code	O.D. Avg (in)	I.D. Avg. (in)	Min. Bend Radius (in)

		500	121422			

Note: Custom coil and reel sizes may be available upon request.

APPLICATIONS

- Water Service Tubing

STANDARDS

ADVANTAGES

- 1 Non-corroding
Resistant to corrosive soils, aggressive water, stray electrical currents and moist environments
- 2 Lightweight
A 200 foot coil of 3/4" Gold901 weighs 20 lbs
- 3 Sequential Markings
Every 2 or 5 feet
- 4 Superior Flow
Hazen Williams C-Factor = 150
- 5 High Pressure
Rated at 250 psi at 73°F (1725 kPa at 23°C)

BLUE904 PEX WATER SERVICE TUBING

3/4" – 2" (20mm – 50mm)

BLUE904®

As copper prices continue to rise, cities across North America are turning to cost effective alternatives for their water service lines that connect municipal watermains to buildings.

Blue904™ is fully certified, lightweight and flexible PEX water service tubing. Installation friendly, Blue904 will resist corrosion, maximizing water flow over the lifetime of the system. Made with a copper tube size (CTS) OD (SDR 9), Blue904 works with standard compression fittings and is available in 3/4", 1", 1-1/4", 1-1/2" and 2" (20, 25, 32, 40 and 50mm) sizes.

APPLICATIONS

- Water Service Tubing

2	50	117007	100	1.625	41.3	12.0	305

DID YOU KNOW?

Blue904 has a significantly lower coefficient of thermal conductivity and much higher allowable strain than copper, thus making it less susceptible to freeze damage. Blue904 will remain flexible and easy to bend at temperatures below 30°C (86°F).

ADVANTAGES

- Easy Installation**
No special tools required.
- Corrosion Resistant for Long Life**
Blue904 will resist the effects of chlorine and scaling and will not corrode in soil.
- Lightweight and Flexible for Easy Handling**
- Jobsite Safe**
Unlike copper tubing, PEX tubing has no scrap value, eliminating the threat of jobsite theft common with copper. As a result, no special storage precautions are necessary.
- Packaging and Markings**
Blue904 is available in 100 ft and 300 ft coils and is packaged in boxes for UV protection and portability. Each coil has footage markings to assist during installation and is identified with product name, size, certifications and manufacturing date.

Q-LINE WATER SERVICE TUBING

3/4" & 1" (20mm – 25mm)

Q-Line is a composite water service tubing that delivers the strength of metal, a flexibility similar to that of soft copper, and the durability of thermoplastic. The pipe is manufactured to AWWA C903 and CSA B137.9 to ensure a high quality product that can eliminate the shortcomings of traditional piping materials.

ADVANTAGES

- 1 Engineered Composite Construction**
A composite pipe constructed of flexible aluminum tubing permanently bonded between inner and outer layers of raised temperature polyethylene (PE-RT), Q-Line's unique structure offers optimum strength and toughness in a lightweight, easily handled and installed water service tubing.
- 2 Superior to Traditional Pipe**
Unlike copper, Q-Line's non-corroding thermoplastic layers resist the most aggressive water conditions and hot-soil environments.
Q-Line won't leach copper or other metallic ions, so the quality of drinking water is assured and service life is longer.
- 3 Potable Water Certified**
Q-Line carries third-party ASTM F1282 and CSA B137.9 certification, as well as NSF-PW potable water certification, and meets all North American plumbing codes for water supply up to and inside the building.
- 4 High Flow Rates**
With larger inside diameters than CTS polyethylene piping and a super-smooth interior wall that does not permit build-up of calcium or other minerals, Q-Line offers the best flow rates in the industry.
- 5 Handles Like Copper**
Simply roll Q-Line tubing down the trench and it stays where it's laid (unlike plain polyethylene). You can make goosenecks and bends easily just as you would with copper, and Q-Line keeps its shape.

APPLICATIONS

- Water Service Tubing
- Reclaimed Water Applications

STANDARDS

Q-Line water service tubing is manufactured to AWWA C903, ASTM F1282 and CSA B137.9, and meets NSF-PW potable water requirements as well as requirements of the following national codes.

- National Plumbing code of Canada
- Uniform Plumbing Code
- International Plumbing Code
- International Residential Code
- National Standard Plumbing Code
- SBCCI Standard Plumbing Code

ADVANTAGES

- 6 Excellent Corrosion Resistance, Long Service Life**
Q-Line's tough inner and outer polyethylene layers resist most acids, salt solutions and alkalis found in aggressive water and soil environments. Q-Line also carries tough NSF CL-TD chlorine resistance certification. Bury Q-Line directly in the ground or encase it in concrete – without the need for protective sleeving. And because Q-Line is not susceptible to corrosion and pitting, it provides longer service life than metallic water service tubing.
- 7 Built-in Permeation Barrier**
Permeation is a real issue with small diameter water service tubing. Unlike poly water service tubing which is susceptible to permeation by a variety of chemicals, Q-Line's built-in aluminum core creates a permeation barrier against ground source contaminants. In fact, Q-Line composite water service tubing has been successfully tested against the most aggressive contaminants, like termiticides.
- 8 Increased Electrical Safety, Reduced Galvanic Corrosion**
Unlike metallic pipe, Q-Line will not conduct stray electrical current. So the chance of electrical shock is greatly reduced. A separate grounding plate or rod must be installed according to AWWA recommendations. And because Q-Line won't conduct stray current, it reduces corrosion of metallic components within the distribution system.
- 9 Zero Scrap Value**
Because Q-Line's metallic core is permanently locked between layers of polyethylene, it has zero scrap metal value. So unlike copper and other valuable metals which are continually disappearing due to theft, Q-Line is more likely to stay on the job site where it's needed.

DID YOU KNOW?

Like other nonmetallic pipes, Q-Line can be located using a standard tracer wire installed at the same time as the water service line.

SHORT FORM SPECIFICATIONS

TUBING

Water service tubing shall be composite PE-AL-PE tubing manufactured in accordance with the requirements of AWWA C903 and certified to CSA B137.9 and ASTM F1282. It shall have a long term pressure rating of 1380kPa at 23°C (200 psi at 73°F) and 690kPa at 82°C (100 psi at 180°F). The pipe shall be third-party tested and certified to comply with NSF-PW potable water and NSF CL-TD chlorine resistance requirements. The service tubing shall be color coded light blue as manufactured by IPEX under the trade name "Q-Line" or approved equal.

FITTINGS

Fittings for composite PE-AL-PE tubing shall be brass water service fittings conforming to AWWA C800.

PRODUCT SELECTION & DIMENSIONS

Q-Line has unique inside and outside diameters that are different both from copper and conventional PE service tubing. Easily installed adapters that allow Q-line to be used with standard brass fittings are widely available.

PHILMAC 3G COMPRESSION FITTINGS FOR WATER SUPPLY

1/2" – 2" (12mm – 50mm)

Turn on to the next generation of water line compression fittings: Philmac 3G. Based on 25 years of fitting experience, 3G is our most innovative and revolutionary fitting yet. It represents the culmination of years of development and engineering, cutting-edge manufacturing technology and punishing performance testing.

To create a truly advanced next generation fitting, Philmac questioned every detail—from fitting design to material. The end result is a plastic fitting that's strong, easy to install and long-lasting, all at a cost lower than that of brass fittings with a quality far superior to metal insert fittings.

Something definitely worth turning on to.

IPEX offers Philmac 3G in two preassembled fittings (CTSOD and ID Series) for all sizes, as well as easy-to-use adaptor kits that can convert these fittings for IPSOD, COPPER and Q-Line pipe applications.

ADVANTAGES

- 1 Turn-to-Tighten Design**
Philmac's unique design allows you to achieve a perfect seal with the turn of a hand or wrench. Visual stops and gradually increasing mechanical resistance as the nut is tightened reduces the risk of over-tightening.
- 2 Compact Ergonomic Grip**
Small and lightweight, Philmac 3G fittings are specially shaped to your hand for easy turning. Their compact size is perfect for working in confined areas.
- 3 Advanced Material**
Philmac 3G fittings are made from an advanced high-performance polypropylene so they're UV-, impact- and corrosion-resistant—tough enough for 50+ years of reliable service.
- 4 Dynamic Compression Sealing**
Philmac 3G fittings are highly engineered to provide a robust leak-proof seal with superior pull-out resistance. In addition, the strength of the nut ensures minimal distortion when tightened with a wrench.
- 5 Component Interchangeability**
Because both the CTSOD and ID Series fittings are based on the same core fitting design, components can be easily interchanged in order to transition from one type to another on the same fitting. And with adaptor kits available for other material types, you'll always have the right fitting for the job.

APPLICATIONS

- Residential Water Service
- Residential Irrigation Systems
- Cottage Country Water Service
- Rural Irrigation • Geothermal

STANDARDS

DID YOU KNOW?

Philmac 3G used in conjunction with CSA certified Pipe with the Stripe Poly can give users the only CSA and potable water certified pipe and fitting system for well water supply.

PHILMAC 3G CTSOD

VISUAL STOPS & GRADUAL MECHANICAL RESISTANCE PREVENT OVER-TIGHTENING

A clear visual stop and mechanical resistance indicates when fully tightened.

FEWER TURNS TO TIGHTEN

Only 1-1/2 turns are needed to tighten up the nut.

NO FORCE TO SLIDE IN

No force is required to slide the pipe into the fitting.

NO PIPE TWISTING DURING INSTALLATION

Fitting designed to avoid pipe twist, reducing risk of untightening joints.

EASY CONNECT / DISCONNECT

The split collet enables easy connection and disconnection, ideal for seasonal water lines.

MINIMAL DISTORTION WHEN TIGHTENED WITH WRENCH

The strength of the acetal nut ensures minimal distortion when tightening with a wrench.

ADAPTER KITS

If IPSOD, Q-LINE or COPPER is being used, the joint can be easily converted using adaptor kits.

PHILMAC 3G ID

MINIMAL DISTORTION WHEN TIGHTENED WITH WRENCH

The strength of the acetal nut ensures minimal distortion when tightening with a wrench.

EASY CONNECT/DISCONNECT FOR SEASONAL WATER LINES

Disconnection and reconnection to pumps or seasonal water lines is made quick and easy.

LESS FORCE TO PUSH INSERTS IN

Simply push or hammer in inserts—no heating as with barb assemblies on metal insert fittings.

VISUAL STOPS & GRADUAL MECHANICAL RESISTANCE PREVENT OVER-TIGHTENING

A clear visual stop and mechanical resistance indicates when fully tightened.

ONE FITTING CONNECTS TO ANY 75 TO 200 SERIES PIPE

Compatible with all types of ID Series pipe, the 3G fittings eliminate the need for dedicated fittings and reduces inventory.

3/4	20	258123	
1	25	258124	

IPS OD Adapter Kit (Includes IPS Nut, Green Collet, IPS Seal)

3/4	20	258125
1	25	258126
1-1/4	32	258127
1-1/2	40	258128
2	50	258129

Note: These conversion kits are used to convert CTSOD fittings into Copper, Q-Line or IPSOD fittings. Simply remove the existing nut, collet and seal from the CTSOD fitting and assemble according to the instructions contained on page 8 of this ordering guide - "Converting Philmac 3G Fittings"

Philmac 3G collets and inserts are colour coded according to pipe type, the following chart lists the 5 pipe types and their corresponding Philmac 3G colour :

Pipe Type	Philmac 3G Collet Colour
CTS	Gold
ID Series	Red
IPS	Green
Q-Line	Blue
Copper	Brown

IPEX drain, waste and vent (DWV) systems have been proving themselves across North America – both below and above grade – for more than three decades. Lightweight and easy to install, even in confined spaces, IPEX DWV systems for combustible and noncombustible applications have become the material of choice in residential, industrial and commercial construction.

DRAIN-WAY® ABS DWV SYSTEMS

1-1/4" - 6" (30mm - 150mm)

ABS-DWV

Throughout Canada, ABS-DWV (drain, waste and vent) piping has been successfully used in single family homes and general wood-frame construction. Builders and contractors have enjoyed the durability, ease of installation and overall value of ABS in providing a plumbing drain system.

The pipe may be used both above ground and underground and is made in Schedule 40 pipe dimensions in either solid wall or cell core composition. Sizes range from 1-1/4" - 6" (32mm to 150mm) and a broad range of ABS DWV fittings are also provided by IPEX for complete system installations.

ADVANTAGES

- 1 Years of Maintenance-Free Service**
ABS will not rust, pit or degrade when exposed to moisture and is extremely resilient and durable. This lightweight ABS-DWV offers easy and quick installation without specialized equipment, even in confined spaces.
- 2 Code Compliant**
IPEX ABS (Solid Wall) and fittings have been third-party certified to CSA B181.1 while ABS (Cell Core) pipe is certified to ASTM F628, both ensuring a consistent quality product with reliable long-term performance. In addition, IPEX can be of assistance in suggesting where ABS piping is permitted by Building codes and or where other products may be a more suitable alternative.
- 3 Complete Line of Fittings**
IPEX manufacturers not only ABS-DWV pipe, but a complete line of ABS fittings, ensuring integrity throughout the plumbing system. In addition, our products are promptly available throughout any IPEX distributor.

APPLICATIONS

Drain Waste and Vent Piping for:

- Single Family Homes
- Multi-Plex Residential
- General Wood Frame Buildings

STANDARDS

Solid Wall CSA B181.1

Cell Core ASTM F628

DID YOU KNOW?

ABS is commonly used by the automotive industry for car bumpers due to its affordable cost, high impact strength and general toughness.

IPEX Mechanical Systems...times have changed!

System 636®

FLUE GAS VENTING

- ✓ A fully certified system of pipe, fittings and cements
 - ✓ Two system options cover a broad range of operating temperatures
 - ✓ PVC sizes 1-1/2" to 4"
CPVC sizes 1-1/2" to 8"
- Use standard CIOD or IPS fittings

SYSTEM 15® DWV SYSTEM XFR® DWV

DWV SYSTEMS

- ✓ Meets code requirements for noncombustible buildings
- ✓ Significantly lighter than cast iron
- ✓ High impact resistance
- ✓ Improved Flow

MJ GREY™ DWV

DWV COUPLINGS

- ✓ Used with System 15 / System XFR
- ✓ Sizes 8" to 12"
- ✓ Designed specifically for PVC Diameters

SOLVENT WELD SEWER & DRAIN PIPING SYSTEMS

3" - 6" (75mm - 150mm)

PVC Solvent Weld

IPEX offers an engineered integral PVC sewer and drainage system. PVC solid sewer pipe is used for the collection of domestic waste and storm water. PVC perforated sewer pipe is used for septic fields and foundation drainage. The solvent weld assembly method offers tight joints, eliminating infiltration, exfiltration and root infestation. A complete line of solvent weld sewer fittings is available for use with our pipe. IPEX PVC solvent weld pipe and fittings are available in nominal sizes from 3" to 6" (75mm to 150mm).

ADVANTAGES

- 1 Costs Less to Operate**
A plastic sewer system costs less to operate and maintain because it has greater flow capacity per given size and fewer joints. The pipe is flexible enough to conform to shifts and setting caused by unstable soil conditions or traffic without cracking, breaking or opening of the joints.
- 2 Greater Hydraulic Efficiency**
PVC has the smoothest flow surface of any piping material today resulting in a Manning flow coefficient, N of .009. As a result, the pipe will not be susceptible to blockages and will maintain a high flow capacity over the life of the pipeline. The BDS piping will outperform corrugated interior tubing products in flow capacity and structural performance, especially in perimeter drain applications.
- 3 Life Cycle**
The economic life cycle of a PVC sewer system is projected at more than 50 years.

APPLICATIONS

- Building sanitary or storm drain lines
- Foundation perimeter drains
- Septic field distribution piping

STANDARDS

BDS sewer pipe is available in Standard Spec or third-party certified to CSA B182.1 or BNQ 3624-050 and conforms to ASTM.

BDS fittings, made to SDR35 wall, are third party certified to CSA B182.2 and BNQ 3624-130 and conform to ASTM D2729.

DID YOU KNOW?

No other pipe approaches BDS plastic pipe in terms of low weight per foot ratio to strength. The light-weight section reduces manpower needs, reduces equipment handling cost, and freight cost.

DRAINAGE SYSTEMS FOR NONCOMBUSTIBLE BUILDINGS

SYSTEM 15® DWV DRAIN-GUARD™ DWV

SYSTEM XFR® DWV MJ GREY™ DWV

From underground parking garages to hospitals to high buildings, more and more mechanical contractors and engineers are switching to a long-lasting DWV solution.

Why are PVC systems from IPEX becoming the new standard? As an integrated solution, System 15® and System XFR® meet all code requirements for noncombustible buildings. More importantly, they provide the required rugged reliability with all the added benefits of PVC. They're lighter than their metal counterparts, making them easier to handle and install. Very durable, they resist corrosion and require virtually no maintenance. And they yield substantial cost savings both now and down the road.

Clearly System 15 and System XFR have raised the bar—and pipe—for DWV systems in noncombustible buildings.

Drain-Guard™ double containment piping systems provide safe transport of sanitary or storm drainage in critical areas. Should a leak occur, people, equipment and valuable property will be protected from possible harm.

Depending on your application, Drain-Guard is a double containment piping system using System 15 and/or System XFR as its primary components. The many performance benefits of System 15 and System XFR are enhanced by this dual pipe concept.

MJ Grey™ mechanical couplings are a great alternative to solvent welding when working in cold weather conditions or from heights in a scissor lift or bucket.

APPLICATIONS

Drain Waste and Vent Piping in:

- Commercial
- Industrial
- Residential
- Above ground or underground

STANDARDS

CSA B181.2
CAN/ULC S102.2

ADVANTAGES

- 1 Lightweight, Easier to Install**
A PVC system is as much as 75% lighter than equivalent lengths of cast iron, making it easier to handle, store and install. It's so light no special equipment is needed to hoist it up during installation, making what used to be awkward, back-breaking work now an easy one man job. In this way, a PVC system can lower labour requirements and reduce installation costs.
- 2 Corrosion-Resistant, Less Maintenance**
Unlike cast iron pipe, a PVC system doesn't rust, pit, scale or corrode. In fact, its interior and exterior walls remain smooth in virtually any service condition, requiring virtually no maintenance and ensuring years of reliable service.
- 3 Cost-Savings Now and Over Long-term**
No matter how you look at it, a PVC system is more cost-effective than a traditional metal system. It's less costly to transport and store. It's easier to install, bringing down installation costs. It lasts longer. What this all adds up to is substantial savings now and in the future.
- 4 A More Aesthetic Alternative**
Sleek and streamlined, PVC presents a more pleasing, aesthetic alternative to traditional metal systems. And as they won't rust and degrade, your PVC system will look as good in ten years as it does the day you install it.

CODE COMPATIBILITY

System 15 pipe and fittings, when used in combination with System XFR, not only satisfies National and Provincial Building Codes but also provides a cost effective trouble-free long-term installation.

- To use thermoplastic piping in a building classified as noncombustible, the material must meet a Flame Spread Rating of 25 or less. Approval to use thermoplastic piping in noncombustible buildings is detailed in clause 3.1.5.16 of the building code.
- Products for use within air plenums must meet a Flame Spread of 25 or less and a Smoke Developed Classification of 50 or less. (Building Code article 3.6.4.3. (1).)
- Products to be used within a building deemed to be high-rise must also meet the Smoke Developed Classification of 50 or less. (Building Code article 3.2.6).
- The fire resistance rating of a material is attained by having the product tested according to a prescribed test method. National and Provincial Codes specify the test requirements in 3.1.12.1.(2). In the case of thermoplastic piping the prescribed test method is CAN/ULC S102.2.

By using System 15 and System XFR in combination, designers and contractors can maximize the potential installation and cost benefits offered by these two products.

System 15®

System 15 meets the general requirements of noncombustible construction. However, System 15 is not approved for use in air plenums (transitions to System XFR are acceptable here) or buildings classified as high-rise. System 15 also is a viable option for a more rugged underground storm or sanitary drain on the private side of commercial buildings.

System XFR®

System XFR meets the requirements for noncombustible buildings, and the further restrictions of smoke development for air plenums and high rise buildings.

In high-rise buildings, System XFR must be used throughout the building to satisfy the requirement for a 50 Smoke Developed Criterion.

Drain-Guard™

Drain-Guard is our latest innovation to the System 15 and System XFR family of products. The many performance benefits of System 15 and System XFR are enhanced by this dual pipe concept.

Contact IPEX for product availability and pricing for a customized solution on your next project.

MJ Grey™

Meets all the same requirements of System 15 and System XFR and can be used in the same applications.

Note: Combustible DWV piping products are not allowed in a vertical service space.

SYSTEM 15 DRAINAGE SYSTEMS

1-1/2" - 24" (40mm - 600mm)

SYSTEM 15® DWV

As an investment, System 15® is a winner. It's a cost-effective "workhorse" designed for the majority of low-rise and light commercial applications where DWV systems don't run through air plenums.

In addition to costing less than cast iron, System 15 pipe and fittings are engineered to withstand years of uninterrupted service. Made of tough, impact resistant PVC, System 15 won't rust, pit, scale or degrade, even under continued exposure to moisture, salts, aggressive soils and most acids. Interior and exterior walls remain smooth, ensuring years of reliable, maintenance-free flow.

As well, System 15 is lightweight and easy to handle, making installation – even in confined or awkward wall spaces – fast and easy. There's no need to pay for special hoisting equipment or extra manpower. This all converts to significant cost savings over copper and cast iron piping.

Do the math: System 15 is an unbeatable, cost-effective investment – now and for years to come.

ADVANTAGES

- 1 Flame Spread**
When tested to the CAN/ULC S102.2 Standard, System 15 achieved a Flame Spread Rating of not greater than 25.
- 2 Cost Effective**
Lightweight. Easy to handle. Fast installation with no special equipment required. Substantial project cost savings over traditional piping materials.
- 3 Broad Range of Sizes**
CSA certified in sizes from 1-1/2" to 24" in diameter. The most extensive DWV package available in North America.
- 4 Long-term Reliability**
System 15 performs well under constant use in harsh environments corrosive to other materials.
- 5 Impact Resistance**
The high impact strength of System 15 reduces jobsite damage and wastage.
- 6 Simple Joining**
Solvent welding eliminates the need for cumbersome tools and the hazards of torches on site.
- 7 Direct Burial**
Suitable for both above- and below-grade applications, eliminating the transition to other pipe materials at grade level.

APPLICATIONS

Drain Waste and Vent Piping in:

- Commercial
- Industrial
- Residential
- Above ground or underground

STANDARDS

CSA B181.2
CAN/ULC S102.2

DID YOU KNOW?

SYSTEM 15 is lightweight and easy to handle, making installation—even in confined or awkward wall spaces—fast and easy.

There’s no need to pay for special hoisting equipment or extra manpower. This all converts to significant cost savings over copper and cast iron piping

SHORT FORM SPECIFICATIONS

SYSTEM 15 DWV PIPE AND FITTINGS

IPEX System 15 Drain, Waste and Vent pipe and fittings shall be certified to CSA B181.2. When combustible pipe and fittings are used in buildings required to be of noncombustible construction, they shall be listed by ULC to the Standard CAN/ULC S102.2 and clearly marked with the certification logo indicating a Flame Spread Rating not exceeding 25.

IPEX System 15® pipe and fittings have been tested and certified by CSA to the CSA B181.2 standard.

Test Results

ITS (Warnock Hersey) conducted the testing in accordance with CAN/ULC S102.2 test standard. The following table summarizes the results of these tests.

Component	Flame Spread Rating	Smoke-Developed Classification
System 15®		
Pipe	10	> 50
Fittings	15	> 50

SYSTEM XFR DRAINAGE SYSTEMS

1-1/2" – 18" (40mm – 300mm)

SYSTEM XFR® DWV

Contractors installing DWV pipe in high buildings and plenums had few alternatives to heavy cast iron and copper. IPEX has changed that. System XFR® is the world's first PVC DWV system rated for high buildings and air plenums where the National Building Code mandates more stringent Flame Spread and Smoke Development requirements which previously limited the use of thermoplastic.

Suitable for use in noncombustible environments, System XFR's advanced material has a Flame Spread Rating of 25 and Smoke Developed Classification of 50 which permits it to be installed in High Buildings and Air Return Plenums in accordance with local Codes.

And in addition to its flame and smoke attributes, System XFR delivers all the performance advantages you'd expect from thermoplastic piping.

APPLICATIONS

Drain Waste and Vent Piping in:

- Commercial
- Industrial
- Residential
- Above ground or underground

STANDARDS

CSA B181.2
CAN/ULC S102.2

ADVANTAGES

Flame & Smoke

System XFR possesses superior fire- and smoke- retardant capabilities. When tested to the CAN/ULC S102.2 Standard, System XFR achieved a Flame Spread Rating of not greater than 25 and a Smoke Developed Classification of not greater than 50.

Code Compliance

Ideal for noncombustible applications, System XFR meets these national and provincial building codes:

- High buildings as defined by NBC article 3.2.6
- Air plenums as defined by NBC article 3.6.4.3
- Noncombustible construction as defined by NBC article 3.1.5
- Penetrating a rated fire separation as defined by NBC article 3.1.9.4.(4)

High Impact Resistance

Thanks to its advanced materials, System XFR demonstrates a high impact strength in cold temperatures. Impact-tested at 0°C and 23°C, XFR is tough enough to exceed the CSA requirements.

Improved Flow

System XFR has a substantially lower roughness factor compared to metal systems, allowing for overall improved flow. It's also made with a larger inside diameter which provides a greater cross-sectional area for flow and raises both carrying capacity and flow rates. This feature gives engineers the versatility to design smaller, compact systems that can still handle the necessary flow rates.

Lower Thermal Conductivity

System XFR sweats less than metal pipe due to its excellent insulating properties. As a result, XFR can reduce – and in many cases, eliminate – the need for insulation.

Comparable Noise Attenuation

In real world sound tests performed on constructed buildings, IPEX DWV systems have proven to provide comparable noise attenuation when compared to cast iron from drainage flow. Numerous installations from schools to hospitals and nursing homes have been plumbed with these IPEX drainage systems, all proving that in these critical installations the IPEX systems measure up in terms of sound transfer.

DID YOU KNOW?

SYSTEM XFR — the world's first uncoated PVC rated for high buildings and plenums where tighter fire and smoke regulations have previously limited the use of thermoplastic.

Suitable for use in noncombustible environments, System XFR's advanced material meets all fire-resistance and smoke development codes. Its revolutionary fire-retardant properties virtually eliminate flame spread and reduce the volume of smoke generated.

SHORT FORM SPECIFICATIONS

SYSTEM XFR DWV PIPE AND FITTINGS

IPEX System XFR Drain, Waste and Vent pipe and fittings shall be certified to CSA B181.2 and when used in noncombustible construction, high buildings and air plenums, they shall be tested and listed in accordance with CAN/ULC S102.2 and clearly marked with the certification logo indicating a Flame Spread Rating not more than 25 and a Smoke Developed Classification not exceeding 50.

System XFR® pipe and fittings have been tested and certified by CSA to the CSA B181.2 standard. System XFR pipe and fittings are listed with ITS (Warnock Hersey) to exhibit Flame and Smoke values as per CAN/ULC S102.2-10.

Test Results

ITS (Warnock Hersey) conducted the testing in accordance with CAN/ULC S102.2 test standard. The following table summarizes the results of these tests.

Component	Flame Spread Rating	Smoke-Developed Classification
System XFR®		
Pipe	≤ 25	≤ 50
Fittings	≤ 25	≤ 50
Fabricated PVC fittings with XFR Coating	≤ 25	≤ 50

The **Modern Age** of DWV is here

Mechanical engineers and contractors are converting from metal piping to System XFR® and System I5®

SYSTEM XFR® DWV
SYSTEM I5® DWV

PROVEN BENEFITS

IMPROVED FLOW – Larger inside diameter and smoother interior walls for more efficient waste removal

THERMAL PROPERTIES – Storm drains can often be used without insulation

LONGEVITY – Extremely durable, will not rust or corrode

JOINING METHODS – Solvent welding or MJ Grey™ mechanical joint coupling options

PLENUM/HIGH-RISE – System XFR® carries 25/50 Flame/Smoke requirements

LABOUR SAVINGS – Easy to handle, cut and assemble

ENVIRONMENTAL EFFECTS – Local manufacturing minimizes transport and reduces carbon footprint

SYSTEM XFR® DWV

Proven in noncombustible environments, the advanced material meets all Flame and Smoke code requirements.

SYSTEM I5® DWV

A cost-effective "workhorse" designed for low-rise, light commercial and underground applications.

DRAIN-GUARD DOUBLE CONTAINMENT

DRAIN-GUARD™ DWV

Drain-Guard™ double containment piping systems provide safe transport of sanitary or storm drainage in critical areas. Should a leak occur, people, equipment and valuable property will be protected from possible harm.

Drain-Guard provides the secure environment necessary for piping in vital areas of a wide variety of buildings, including hospitals, museums, historical sites, libraries, art galleries, theatres, data centres, restaurants, and arenas.

Drain-Guard is a double containment piping system using System 15 and or System XFR as its primary components. The many performance benefits of System 15 and System XFR are enhanced by this dual pipe concept.

THE PROBLEM

What would happen if there was a leak over a computer server room or a backup system causing significant loss of data? What if there was a drop of water on a rare renaissance oil painting? What if there was a plumbing leak above a new grand piano in a resident's condominium? Insurance may cover the costs associated with ceiling and property repairs, but it cannot recover valuable user data and priceless artifacts.

THE SOLUTION

A double containment piping system is an engineered solution to the above concerns.

ADVANTAGES

- 1 CERTIFICATION**
Drain-Guard pipe and fitting components are third party certified to CSA B181.2
- 2 RELIABLE JOINTS**
Double wall solvent weld joints set a new standard for joint-tightness in a DWV application.
- 3 LOWER CONDENSATION POTENTIAL**
The excellent insulative properties of System 15 and System XFR are enhanced with the secondary pipe and air barrier. Thus, condensation potential is greatly reduced.

APPLICATIONS

- Healthcare/Hospital Use
- Historical Sites • Museums & Libraries
- High-Tech & Data Storage Environments (Network & Server Rooms etc.)
- Theatres, Restaurants (Public Areas)
- Residential Buildings
- Laboratory Applications

STANDARDS

Meets the same requirements of System 15 and System XFR.

Primary Pipe

DID YOU KNOW?

Depending on your application, **DRAIN-GUARD** is a double containment piping system using System 15 and or System XFR as its primary components. Both of which have been used successfully in noncombustible buildings for many years. The performance benefits of System 15 and System XFR are enhanced by this dual pipe concept, including excellent thermal properties, improved flow, longevity and durability, and the security of meeting all code requirements for noncombustible buildings.

CODES & STANDARDS

FLAME & SMOKE

Drain-Guard is listed to the CAN/ULC S102.2 Standard with a Flame Spread Rating of not greater than 25 and a Smoke Developed Classification of not greater than 50.

CODE COMPLIANCE

Drain-Guard conforms to the following National Building Code of Canada requirements.

- High buildings as defined by NBC article 3.2.6
- Air plenums as defined by NBC article 3.6.4.3
- noncombustible construction as defined by NBC article 3.1.5

- Combustible construction as defined by Part 9

CERTIFICATION

Drain-Guard pipe and fitting components are third party certified to CSA B181.2

MJ GREY COUPLINGS

1-1/2" - 18" (38mm - 450mm)

MJ GREY™ DWV

IPEX is proud to announce the extension of our MJ Grey family of System 15 and System XFR DWV products to include mechanical couplings in sizes 1-1/2" through 18". The new couplings will have the familiar grey rubber lining to indicate their use for IPEX System 15 or System XFR only.

MJ Grey offers installers an alternative joining method for System 15 and System XFR in all sizes. In particular, MJ Grey may be advantageous for colder weather, minor offsets, difficult installation areas, repairs or tie-ins.

* MJ Grey couplings are suitable only for use with System 15 and System XFR pipe and fittings

APPLICATIONS

Drain Waste and Vent Piping in:

- Commercial
- Industrial
- Residential
- Above ground or underground

STANDARDS

CSA B602
CAN/ULC S102.2

Test Results

Normal testing procedures for System 15 or System XFR may be employed if using MJ Grey couplings. Maximum water or air test pressure shall be 10 feet of head or 4.3 psi for all sizes.

Proper safety precautions and protective equipment should be employed during all testing procedures.

SHORT FORM SPECIFICATIONS

MJ GREY™ COUPLINGS
MJ Grey couplings are a mechanical joint assembly suitable only for use on IPEX System 15 or System XFR DWV piping. These couplings come in a range of sizes from 1-1/2" to 18" in diameter. They are designed specifically for PVC pipe and are Certified to CSA B602, as well as Listed to ULC 102.2, while exhibiting a Flame Smoke Rating of 25/50.

DRAINAGE SYSTEMS – CEMENTS & FIRE STOPPING PRODUCTS

LEED COMPLIANT, SYSTEM 15 & XFR SOLVENT CEMENT IPEX offers a variety of cements to ensure easy installation and a good joint every time. System 15 and XFR cements are formulated to the highest standards and manufactured with the strictest quality control. We also offer low VOC solvent cements that comply with LEED building standards.

SHORT FORM SPECIFICATIONS

SOLVENT CEMENTS

System 15 and System XFR cements shall be CSA-certified and meet the requirements of ASTM D2564. System 15 and System XFR One-Step cement may be used for sizes 1-1/2" to 6" (40mm to 150mm) only. For sizes 8" through 12", System 15 or System XFR Two-Step cement should be used along with System 15 / XFR Primer. For System 15 pipe 14" to 24" (350mm to 600mm), refer to Xirtec 19 cement. Proper solvent welding procedures must be followed at all times.

IPEX FIRE STOPPING PRODUCTS

Whatever the installation—concrete floor, concrete wall, Q-Deck, wood frame, drywall or core slab construction—IPEX offers a wide range of firestop products certified for use with System 15 and System XFR. These products include straps, collars and cast-in-place devices as well as caulks and sealants.

SHORT FORM SPECIFICATIONS

IPEX FIRESTOPPING DEVICES

System 15 or System XFR shall be firestopped at all penetrations of fire-rating floors and walls using devices or systems that are listed to ULC/CAN4 S115. Listings shall include the application of DWV, material specified as PVC, all required components and exact method of installation. All listings shall include testing done with a 50 Pa pressure differential.

BACKWATER VALVES

1-1/2" - 4" (40mm - 100mm)

BACKWATER VALVES

TODAY'S BEST PROTECTION AGAINST SEWER BACKUPS

Any building connected to a sewer is subject to a possible sewer backup. An IPEX Backwater Valve can offer protection against this potential disaster. Available in both PVC and ABS lightweight, corrosion-resistant plastic, and are certified with CSA and IAPMO to B181.2 for PVC and to B181.1 for ABS.

HOW IT WORKS

The IPEX Backwater Valve will allow flow in only one direction. Effluent flowing out of the house pushes the flapper open and drains to the sewer. During backup conditions however, the flapper is pushed closed which creates a positive seal against backflow from progressing further up the pipeline.

APPLICATIONS

- Back Flow Prevention (gravity flow only)

STANDARDS

DID YOU KNOW?

IPEX recommends annual inspection of backwater valves to ensure no obstructions interfere with the sealing of the flapper.

ADVANTAGES

- 1 Available in both PVC and ABS
- 2 Lightweight
- 3 Corrosion resistant
- 4 Smooth walls provide high flow capacity
- 5 Easy to install – hubs are sized to fit DWV or sewer pipe
- 6 Arrows clearly indicate the flow direction
- 7 Access chimneys and plugs are available to facilitate installation under concrete floor slabs
- 8 Approved by CSA and IAPMO

Don't take chances with your Flue Gas Venting system installations

System 636® is available in PVC and CPVC.

System 636 product installation and solvent welding training is recommended every three (3) years

System 636® Flue Gas Venting provides a complete product offering to get the job done on-time and to the finished quality customers need.

Avoid uncertainty and go with the proven system solution – System 636 by IPEX.

- Unmatched quality
- Permanent solvent weld connections
- Rugged Schedule 40 thickness
- Installer training
- Leading distributors
- Technical support

Everything an installer needs for quality, safe vent installations.

System 636® – Ask for it by name

For Flue Gas Venting Applications

System 636®
FLUE GAS VENTING

IPEX offers complete certified systems of pipes, fittings and cements for gas venting. All with the quality, performance and support you've come to expect from IPEX.

Gas Venting

System 636 Flue Gas Venting

SYSTEM 636 FLUE GAS VENTING

PVC 1-1/2" - 6" (40mm - 150mm)
CPVC 1-1/2" - 8" (40mm - 200mm)

System 636®

The use of plastic venting systems on gas fired water heaters, furnaces and boilers has undergone a significant change. CSA B149.1 Natural Gas and Propane Installation Code now requires all special venting material to be certified to ULC S636 across Canada. IPEX addressed this market need with System 636, a fully certified flue gas vent system.

Since the inception of System 636, IPEX has made numerous product line additions and extensions to now offer the most complete product offering in the market. Also, System 636 is very professionally represented by IPEX with sales, technical, code issues and training support.

Front and centre to aid installers and inspectors is the System 636 Installation Guide. The contents of this guide are part of the certification process and contain many important aspects of installation to ensure successful, code-compliant installations. Issues addressed in the Guide include support spacing, expansion and contraction, solvent welding procedures and special installation and terminations.

APPLICATIONS

- Flue Gas Venting
- Residential or Commercial

ULC S636

DID YOU KNOW?

To help fully understand the procedures for cementing PVC and CPVC System 636 versus traditional ABS material, IPEX offers an on-line System 636 solvent welding refresher course.

ADVANTAGES

- 1 Fully certified as a complete pipe, fittings and cement system.
- 2 2 system options cover a broad range of operating temperatures.
- 3 Manufactured and supported by the Canadian PVC & CPVC piping system experts.
- 4 No mixing clause of ULC S636 ensures full compatibility of all pipe, fittings and cement.

TWO CERTIFIED SOLUTIONS

SYSTEM 636 PVC

System 636 PVC is classified as Type BH Class II A vent, suitable for use on appliances with flue gas temperatures up to and including 65°C (149°F). Sizes include 40, 50, 65, 75 and 100mm (1-1/2", 2", 2- 1/2", 3", 4" and 6"). Coloured white with unique blue certification markings, System 636 PVC pipe is made to sturdy Sch. 40 dimensions to provide a strong, rigid pipe for the application. A full range of certified vent fittings and accessories offered.

SYSTEM 636 CPVC

System 636 CPVC is classified as Type BH Class II B vent, suitable for use on appliances with flue gas temperatures up to and including 90°C (194°F). CPVC sizes include 40, 50, 65, 75, 100, 150 and 200mm (1-1/2", 2", 2- 1/2", 3", 4", 6" and 8"). Coloured grey, System 636 CPVC pipe is also made to sturdy Sch. 40 dimensions to be tough enough for the application's demands.

SYSTEM 636 CEMENTS & PRIMERS

System 636 PVC & CPVC solvent cements are specifically formulated and certified for flue gas venting applications. We also offer a PVC & CPVC Primer for applications where the gas venting system is to be installed in temperatures below 0°C (32°F). And our specialized transition cement is required for connection to ABS appliance connectors.

System 636®
FLUE GAS VENTING

THREE CERTIFIED WAYS TO TERMINATE YOUR SYSTEM 636® FLUE GAS VENTING SYSTEM

UNIVERSAL CONCENTRIC VENT KITS (UCVK™)

The System 636 UCVK™ offers horizontal coaxial termination specifically for venting tank-less water heaters installed on an exterior wall. An engineered air intake hub, pivots to accommodate the spacing requirements between the fresh air, and exhaust collars for the majority of tankless water heaters offered on the market today. Designed utilizing the fundamentals of the Concentric Vent kits, the 2" and 3" UCVK is made to optimize productivity through ease of installation.

CONCENTRIC KITS (PVC & CPVC)

System 636 Concentric Kits, are available in a variety of lengths and come in 2", 3" and 4" diameters. These "pipe-in-pipe" kits allow for both exhaust and intake pipes to penetrate the roof or side wall through only one hole. The concentric vent kits are now certified with mechanically fastened rain caps. When installed with the included stainless steel screw/nut the rain cap can be easily removed for cleaning or replacement.

SIDE WALL KITS (PVC)

For a traditional vent style, IPEX's PVC Side Wall Vent Kits are available in convenient 2", 2-1/2" and 3" sizes. These PVC kits require only two small wall penetrations for intake and exhaust. Kits include a white finishing plate with a self sealing foam back that can be screwed to the exterior wall.

LOW PROFILE TERMINATION KITS (PVC)

The kits offer a lower profile alternative to the typical two pipe side wall termination kit. They include integrally molded vent screens, and the design neatly disguises both the intake and exhaust. Each kit is molded with a ULC S636 certified beige PVC compound.

VENT SCREENS

IPEX also offers 2", 3", 4", 6" and 8" vent screens to prevent debris and rodents from entering and plugging the venting system. These non-certified vent screens can be friction fit in any IPEX termination kit.

ROUND FACE PLATES

These round face plates are the perfect accessory for single wall penetrations like the Concentric Vent Kits, or in instances where two pipes are too far apart to use a two hole termination kit. The face plates help cover unsightly bore holes created during the pipe installation. They are available in both white and grey to match the certified vent pipe, and each plate includes a self sealing foam back.

Peace of Mind from the Ground Up™

Protect yourself and your family with RadonX™ Soil Gas Venting

Radon gas is a colourless, odourless gas that occurs naturally from decaying uranium in the soil. Over time, it can seep into a home through cracks and openings in the foundation. If not adequately vented, it can build to concentrations that pose a serious health hazard.

RadonX™ Soil Gas Venting systems from IPEX is Canada's first PVC radon gas piping system. The product line consists of perforated gas collector and venting pipes, fittings, accessories and solvent cement.

Working together as an engineered system, RadonX™ safely collects and vents soil gas before it enters your home.

While it is easier and less expensive to install when a home is being built, it can also be installed retroactively in existing homes.

For more information please contact 1-866-473-9462 or visit ipexna.com

According to Health Canada, Radon is the second leading cause of lung cancer after smoking. More than 3,000 people die from radon-induced lung cancer every year in Canada.*

Peace of Mind from the Ground-Up™

RADONX SOIL GAS VENTING

PVC 4" (100mm)

Radon is a colourless, odourless gas that occurs naturally from the decay of uranium, a natural radioactive material found in all soil and rock. Radon gas can accumulate to dangerous levels inside a home and become a risk to human health causing lung cancer.

DID YOU KNOW?

Radon is the second leading cause of lung cancer after smoking. More than 3,000 people die from radon-induced lung cancer every year in Canada*.

Radon gas can enter the building through openings in contact with soil such as cracks in foundation walls, floor slabs and gaps around service pipes and floor sumps etc. The most common and effective radon gas reduction method is called sub-slab depressurization. This involves installing a perforated pipe through the foundation floor slab that draws the radon gas from below the home and a vent stack that releases it into the outdoors where it is quickly diluted.

RadonX™ is the first PVC piping solution that is specifically designed, tested and labeled to address the need for collecting and venting soil gas from the sub-slab area to help reduce indoor radon levels. Focusing on low-rise construction, RadonX is designed to maximize system integrity including compatible perforated and non-perforated pipes, fittings, cements and accessories.

Description	RadonX pipe & fittings
Nominal Size	4" / 100mm
Wall thickness	Schedule 40
Colour	Grey

RadonX Soil Gas Venting can help reduce humidity and Volatile Organic Compound (VOCs) levels in basements. Research** shows that soil gas depressurization systems can lower humidity levels and VOCs that originate from contaminated soils and groundwater and enter basements through cracks and openings similar to radon gas.

APPLICATIONS

- Soil Gas Venting
- Residential

STANDARDS

RadonX is tested to and complies with the following recognized standards:

Description	Standards	RadonX
Tolerances and dimensions	CSA B181.2; ASTM D2665	✓
All material and testing requirements	CSA B181.2; ASTM D2665	✓
Gas venting system performance tests		
-Gas leakage	ULC S636	✓
-Pull-out		
-Torque		
-Combustibility		
Solvent cement	ASTM D2564	✓
Product markings	CGSB/CAN 149.11; CGSB/CAN 149.12	✓

** Exploratory Study of Basement Moisture During Operation of ASD Radon Control Systems, 2007 Assessment of Mitigation Systems on Vapor Intrusion: Temporal Trends, Attenuation Factors, and Contaminant Migration Routes under Mitigated And Non-mitigated Conditions, 2015

TESTED AND PROVEN

RadonX Soil Gas Venting has gone through various material and performance tests to ensure product quality and safety. Radon diffusion and radon gas venting performance tests have been conducted by third party testing facilities. Based on the test results, the RadonX PVC pipe material is suitable for venting soil gas containing radon with negligible risk of radon diffusing through the wall of the piping system. In addition, regardless of depressurization system type being active or passive, RadonX gas collection pipe buried within the gravel layer resulted in the highest airflow in the vent stack and the largest depressurization in the sub-slab area. This implies that more soil gas can be removed from below ground with the RadonX piping system.

ADVANTAGES

- 1 Low maintenance solution for soil gas, humidity and VOC reduction in low-rise construction.
- 2 Complete PVC piping system meeting standards and relevant building codes.
- 3 Products specifically designed and tested for soil gas venting application.
- 4 Improved airflow in the sub-slab area with RadonX gas collection pipe featuring smooth interior surface and unique perforation pattern.
- 5 Ease of identification with unique product features, markings and warning labels.
- 6 Roof and side wall termination options.
- 7 Ultra low VOC PVC solvent cement.

NOT LIKE ANY OTHER PIPING SYSTEMS FOUND IN LOW-RISE CONSTRUCTION

A.

- A. Fitting warning labels** are not only for ease of identification but encourage installers to use proper joining methods.

B.

- B. Pipe warning labels** meet CAN/CGSB 149.11 and CAN/CGSB 149.12 guidelines.

C.

- C. Yellow print-lines** are printed on both sides of the pipe (180 degree apart) that includes the material type, its intended application (below or above ground use) and conforming standards.

D.

- D. RadonX soil gas venting and collection pipes** are grey in colour featuring interior and exterior layers and white in the centre layer.

E.

- E. New ultra low VOC PVC solvent cement** is yellow in colour and includes an optical brightener as an additive that is visible under UV light for identification of the proper cement for the application.

F.

- F. Unique perforation** features 6-row hole-drilling pattern.

TERMINATION OPTIONS

All RadonX soil gas vent stacks must terminate outdoors. Full passive stacks are routed vertically through the roof. In fan operated active type installations, the RadonX vent pipe can also be routed through a side wall as an alternative option.

1. ROOF TERMINATION:

The patent-pending rain cap developed by IPEX is a perfect solution to protect the vent stack from unwanted debris, rodents and rain while maintaining excellent airflow. The rain cap is attached to the vertical RadonX vent stack that penetrates the roof, whether it is a passive or an active system. 4" molded PVC rain cap with socket features three vent screens, which improve air movement and help reduce ice and snow build-up during winter months. The cap is mechanically fastened, allowing for quick removal and easy cleaning if required.

2. SIDE-WALL TERMINATION:

Sidewall terminations are only allowed in active soil depressurization systems and can be achieved by installing a 45° elbow and a 4" friction fit vent screen. Round faceplates are the perfect accessory for single wall penetrations. The faceplates include a self-sealing foam back to help cover unsightly bore holes created during the pipe installation. All RadonX™ pipe and fittings are supplied grey in colour; but can easily be painted to blend in with the exterior of the house.

Description	Termination Options Allowed
Full Passive Vertical Stack (without a fan)	Roof
Active Soil Gas Depressurization System (with a fan)	Sidewall or Roof

Approved for more applications than any other nonmetallic system on the market, IPEX BlazeMaster is the new industry standard in fire sprinkler systems.

Fire Protection

BlazeMaster Fire Sprinkler Systems

81

BLAZEMASTER FIRE SPRINKLER SYSTEMS

3/4" - 3" (20mm - 75mm)

BlazeMaster®

Specially formulated for fire sprinkler systems, IPEX BlazeMaster pipe and fittings are made from post-chlorinated polyvinyl chloride (CPVC) and is fully approved for use in NFPA 13 Light Hazard applications in both new and retrofit construction including:

- High buildings, including apartments and hotels
- Schools and institutions
- Single-family residences

Manufactured by IPEX, a world leader in thermoplastic piping systems, CPVC has a 40-year history of continuous and proven service.

With a high flash ignition temperature, low flame spread and smoke development ratings, and a fuel contribution of 0, IPEX BlazeMaster pipe and fittings are an ideal choice for fire sprinkler systems.

IPEX BlazeMaster pipe and fittings meet the most stringent requirements governing the use of combustible pipe in most building types. IPEX BlazeMaster pipe and fittings have been successfully exposed to flame temperatures of 1400°F. After undergoing continuous elevated pressure testing at 400 psi (more than twice the rated pressure) for more than one year, IPEX BlazeMaster CPVC systems showed no sign of weakness or failure.

IPEX BlazeMaster pipe and fittings are manufactured under a strict Quality Assurance Program that guarantees consistency and reliability.

APPLICATIONS

IPEX BlazeMaster Fire Sprinkler Systems offer a level of superior performance that exceeds your requirements:

- Fully approved for use in all NFPA 13 Light Hazard applications
- Field fabrication reduces design engineering
- Smooth inner surface allows pipe downsizing with superior hydraulics – Hazen-Williams “C” factor of 150
- Great in corrosive environments – immune to Microbiology Influenced Corrosion (MIC)
- Less impact on occupants during retrofits
- Design savings
- UL and ULC Listed for use in NFPA 13, 13R, and 13D Light Hazard applications including high buildings
- FM Approved, NSF certified, and permitted for use in air plenums per NFPA 90A

STANDARDS

LISTINGS AND APPROVALS

UL 1821 Listed

- Exposed system risers NFPA 13D, 13R
- Exposed basement NFPA 13D (solid wood joist)
- Extended coverage (exposed) – 20' spacing on pendent in lieu of 15'
- Exposed extended coverage sidewall sprinkler Listings for exposed pipe & fittings
 - 24' extended coverage sidewall sprinkler, 12" drop, 155°F sprinkler head
 - 18' extended coverage sidewall sprinkler, 12" drop, 165°F sprinkler head
 - 16' extended coverage sidewall sprinkler, 12" drop, 175°F sprinkler head
 - 14' standard coverage sidewall sprinkler, 12" drop, 200°F sprinkler head
- Permitted for use with return air plenums with no set-back at ceiling openings per NFPA 90A

ULC Listed

Factory Mutual Approved

- Factory Mutual Approval exposed
- Factory Mutual Approval above drop-in ceilings
- Factory Mutual Approval exposed w/ Soffi-Steel® soffit covering system

Listed to NSF Standard 61

DID YOU KNOW?

Properly selected and correctly installed, BlazeMaster pipe and fittings provide years of maintenance-free service.

ADVANTAGES

IPEX BlazeMaster® pipe and fittings are designed specifically for fire sprinkler systems. They are made from a specialty thermoplastic known chemically as post-chlorinated polyvinyl chloride (CPVC). IPEX BlazeMaster pipe and fittings provide unique advantages in sprinkler installations including superior hydraulics, ease of joining, increased hanger spacing in comparison to other thermoplastics and ease of assembly. They also are based on a technology with a continuous and proven service history of more than 40 years.

1

Lower Installation Costs

In addition to a lower material cost, IPEX BlazeMaster pipe and fittings can significantly reduce labor and transportation costs on a typical installation. The reason? Plastics are easily handled, stored, cut and joined. And, heavy equipment used to install metallic and other piping systems is not required, thereby reducing project costs.

2

Extended Life

The IPEX BlazeMaster System is fundamentally ageless and impervious to normal weather conditions. IPEX BlazeMaster Systems in uninterrupted service have operated successfully for over 20 years. During maintenance or revisions, examinations of the original plastic materials showed excellent physical and hydraulic characteristics.

Once properly selected for the application and correctly installed, IPEX BlazeMaster provides years of maintenance-free service. Our materials will not rust, pit, scale or corrode on either interior or exterior surfaces.

3

Improved Flow

IPEX piping has a substantially lower Roughness Factor than metal and other materials, and since IPEX BlazeMaster CPVC does not rust, pit, scale or corrode, the interior walls remain smooth in virtually any service. This high carrying capacity may result in the use of smaller diameter pipe.

4

Fire Performance

IPEX BlazeMaster will not independently support combustion, and as such will not burn once the flame source is removed. CPVC's ignition resistance is demonstrated by its flash ignition temperature of 900°F.

CPVC has a low Flame Spread Rating and provides excellent Smoke-Developed characteristics. In testing conducted to CAN/ULC S102.2, CPVC showed a flame spread of less than 15, and a smoke-developed classification of 15. And, like PVC, CPVC has a fuel contribution of 0.

Extensive tests on PVC and CPVC compounds prove their outstanding fire performance. These materials meet the most stringent requirements governing the use of combustible pipe in most building types.

IPEX SST™ FITTING REVOLUTIONIZES SPRINKLER INSTALLATION

The new patent pending SST sprinkler head adapter (SHA) fittings improve how quickly, easily and reliably fire sprinkler heads are installed. Here's how...

A CROSS-THREADING REDUCED

Its one-of-a-kind stainless steel leading thread helps align sprinkler heads during installation, greatly reducing the chances of cross-threading.

B FRICTION AND INSTALLATION EFFORT IS REDUCED

Installers will benefit from the reduced level of installation friction between sprinkler heads and the new SST fitting when compared to typical brass SHA fittings. Less friction means less effort and reduced installation time.

IPEX SST™
SPRINKLER HEAD ADAPTER

PRESSURE RATING

BlazeMaster pipe and fittings 3/4" – 3" are rated for continuous service of 175psi at 150°F.

PIPE DIMENSIONS & WEIGHTS

IPEX BlazeMaster pipe is produced in SDR 13.5 dimensions. SDR, or standard dimensional ratio, means the pipe wall thickness is directly proportional to the outside diameter. This results in all diameters carrying the same pressure capability. IPEX BlazeMaster pipe is produced to the specifications of ASTM F 442. IPEX BlazeMaster fittings are produced to ASTM F 437, F 438, or F 439 specifications depending on the size and configuration.

Xirtec® PVC and CPVC pipe, valves and fittings are quality manufactured for easy integration into high-performance systems that deliver exceptional chemical resistance, high carrying capacity, low thermal conductivity and extended life – both above and below ground.

Xirtec PVC & CPVC

Vinyl Process Piping Systems

XIRTEC PVC & CPVC

PVC Sch 40 - 1/2" - 24" (12mm - 600mm)

CPVC Sch 40 & 80 - 1/2" - 16" (12mm - 400mm)

Xirtec® PVC Xirtec® CPVC

THE IPEX SYSTEM ADVANTAGE

Introducing IPEX vinyl process piping systems – A complete line of pipe, fittings, flanges, strainers and valves to meet all your process system requirements.

IPEX manufactures the Xirtec® PVC and Xirtec® CPVC systems to meet industry demands for a complete Pipe, Valves and Fittings (PVF) package that is designed, produced and backed by a single manufacturer. These systems are engineered and manufactured to IPEX's strict quality, performance and dimensional standards, and therefore eliminate compatibility concerns associated with mixed brands of pipe and fittings.

IPEX high-performance vinyl systems are designed to meet the temperature, pressure and flow requirements of piping systems used in chemical processes and other industrial applications. They feature outstanding resistance to corrosion, and are exceptionally suited for use with a wide range of acids, alcohols, salts and halogens. The perfect extended service, low maintenance alternative to common and exotic metal systems.

Xirtec PVC pipe and fittings and Xirtec CPVC pipe are available in Schedule 40 and 80 thicknesses. Xirtec CPVC fittings are also available in Schedule 80 thicknesses.

DESIGNED, MANUFACTURED AND BACKED BY IPEX

Our total systems approach means you can be confident that all the material you need is designed, manufactured and backed by the same company. One source to stand behind you and your complete system.

APPLICATIONS

- Plant chemical distribution lines
- Water and wastewater treatment
- Acid systems for refineries, pickling lines and plating shops
- Chlorine injection, chlorine dioxide and chloralkali plant piping
- Steel wire plants
- Battery manufacturing
- Bleach lines in textile and paper mills
- Alum and caustic handling systems
- Circuit board manufacturing
- Semiconductor
- Pharmaceutical
- Cooling water and cooling tower systems
- Tailing and slurry lines
- Washwater recovery systems
- Plant water supply
- Brine and seawater systems
- Fish farming
- Waterworks
- Aquariums and swimming pools
- Irrigation systems in golf courses, greenhouses, etc.

STANDARDS

XIRTEC PVC

ASTM D1785

CSA B137.3

NSF 14

XIRTEC CPVC

ASTM F441

Caution: Do not use or test PVC or CPVC with compressed air or other gases including air-over-water boosters.

ADVANTAGES

- ① Lower Installation Costs, Easy Handling**
In addition to a lower material cost, Xirtec pipe can significantly reduce labor and transportation costs on a typical installation. The reason? They are lightweight, easily handled, stored, cut and joined.
- ② Extended Life**
Xirtec PVC and CPVC are fundamentally ageless and impervious to normal weather conditions. These piping components in uninterrupted service and in a variety of demanding industrial applications have operated successfully for over 40 years.
- ③ Superior Underground Performance**
Xirtec PVC and CPVC are immune to deterioration from naturally corrosive soil conditions as well as electrochemical and galvanic corrosion. This is particularly advantageous in underground installations where galvanic reaction often causes damage to metal piping products.
- ④ Exceptional Chemical Resistance**
The IPEX vinyl systems, including pipe, valves and fittings, provide outstanding resistance to a wide range of chemicals such as most acids, alcohols, alkalis, salt solutions, halogens and more.
- ⑤ Improved Flow**
Xirtec has a substantially lower Roughness Factor than metal and other materials, and since it does not rust, pit, scale or corrode, the interior walls remain smooth in virtually any service.
- ⑥ Potable Water Approved**
Xirtec PVC (polyvinyl chloride) and Xirtec CPVC (chlorinated polyvinyl chloride) are suitable for use with potable water as listed with NSF International and CSA.
- ⑦ Broad Temperature Range**
IPEX vinyl systems are designed to meet a broad range of service temperatures. Xirtec PVC has a recommended maximum service temperature of 140°F (60°C) in pressure, with intermittent flow capability of 180°F (82°C) for drainage. Xirtec CPVC has a maximum service temperature of 200°F (93°C).
- ⑧ Lower Thermal Conductivity**
With a low thermal conductivity factor, IPEX vinyl systems have less heat loss or gain, thus sustaining service temperature more efficiently than metal piping. As a result, pipe insulation is often not required.
- ⑨ Environmentally Responsible**
With energy conservation a prime concern, you can rely on the fact that IPEX's manufacturing process for Xirtec piping materials require less than half the energy needed to produce the equivalent size of carbon steel or steel alloy materials.

DID YOU KNOW?

One of the outstanding characteristics of PVC is its resistance to ignition. This is demonstrated by its flash point of 730°F (388°C), compared to 400°F (204°C) for woodchips.

CPVC offers an even greater fire safety profile than PVC. CPVC's ignition resistance is demonstrated by its flash point of 900°F (482°C), with a low flame spread as well.

LEGEND

FOR XIRTEC PVC SCHEDULE 40 WHITE

† Fabricated fittings

■ Molded fittings: 150 psi max. working pressure, non-shock @ 73°F (23°C)

FOR XIRTEC PVC SCHEDULE 40 GREY

† Indicates fabricated and fiberglass reinforced pipe fittings

■ Indicates Series 160 Fabricated and Fiberglass reinforced pipe fittings. The maximum continuous working pressure of fittings is 160 psi @ 73°F (23°C) under ideal conditions. no provisions have been made for pressure surges, water hammer, or other conditions which should be considered.

Choosing the correct solvent cement is vital to the performance of your IPEX integrated piping system. We offer a complete range of IPEX brand cements, primers and applicators, designed to ensure the integrity of your application.

Cements & Primers

Solvent Cements

114

IPEX Solvent Cements

Choosing the correct cement is a vital link in a thermoplastic piping system. Although cement is one of the most critical components of a piping system, it is most often overlooked.

Cements are formulated to best meet specific needs – for example, general-purpose cement is thinner and less aggressive in bonding than heavy-duty industrial cement.

IPEX offers a wide range of high strength solvent cements for thermoplastic piping systems. Regular, medium, heavy or extra heavy cements are specially formulated for PVC pipe and fittings up to 900 mm (36") diameter for both pressure and non-pressure applications, CPVC through 300 mm (12") diameter and ABS through 200 mm (8") diameter.

IPEX offers a complete range of cements, primers and applicators so installers can choose the RIGHT ONE for their project and, following the basic steps, be assured of a good joint every time.

Call your nearest IPEX representative for assistance with this critical part of your plastic piping system. On-the-job training, videos and instruction booklets are all available to help ensure you achieve perfect results.

APPLICATIONS

- Industrial Piping Systems
- Plumbing Piping Systems
- Pressure & Non-pressure applications

STANDARDS

ASTM D2235	ABS Solvent Cements
ASTM D2564	PVC Solvent Cements
ASTM D2846	CPVC Solvent Cements
ASTM D3138	Transition Cements
ASTM F493	CPVC Solvent Cements
ASTM F656	Primers

DID YOU KNOW?

You can take IPEX's 'Solvent Cements Online Training' course, developed by leading experts in thermoplastic systems and offered through the IPEX Training Room. To register for this course go to www.ipexna.com.

XIRTEC 05 PVC CEMENT

GREY ■

LOW VOC, 3 Year Shelf Life

NSF and IAPMO listed to ASTM D2564 standard. NSF listed for potable water and sewer pipe. CSA listed for pressure and non-pressure applications.

Medium-bodied, fast setting PVC cement for all classes and schedules through 150 mm (6") diameter with interference fit Sch. 80 through 100 mm (4") only.

pint	473 ml	074346
quart	946 ml	074347

XIRTEC 11 PVC CEMENT

GREY ■

LOW VOC, 3 Year Shelf Life

NSF listed to ASTM D2564 for potable water and sewer pipe. IAPMO listed to ASTM D2564 standard. CSA certified for PVC pressure and non-pressure applications.

Heavy-bodied, medium setting, PVC cement for all classes and schedules through 300 mm (12") diameter, including Schedule 80. Its strong, aggressive penetration properties provide a strong bond. Its medium set allows more working time in warm weather.

1/2 pint	236 ml	074362
pint	473 ml	074363
quart	946 ml	074364
gallon	3785 ml	074365

XIRTEC 7 PRIMER

PURPLE/CLEAR ■ □

LOW VOC, 3 Year Shelf Life

NSF listed to ASTM F656 standard for potable water and sewer pipe.

Xirtec 7 is the most aggressive PVC and CPVC primer commercially available. Excellent product for cold weather applications. If used properly, Xirtec 7 will soften pipe and fitting surfaces which is necessary for the proper solvent welding of the materials.

PURPLE PRIMER

XIRTEC 17 PVC CEMENT

GREY ■

LOW VOC, 3 Year Shelf Life

NSF listed to ASTM D2564 for potable water and sewer pipe. IAPMO listed to ASTM D2564 standard. CSA certified for PVC pressure and non-pressure applications.

Heavy-bodied, medium setting, PVC cement for all classes and schedules through 300 mm (12") diameter, including Schedule 80. It has good gap filling properties and its medium set allows more working time in warm weather.

quart	946 ml	074379

XIRTEC 19 PVC CEMENT

GREY ■

LOW VOC, 3 Year Shelf Life

NSF listed to ASTM D2564 for potable water and sewer pipe. IAPMO listed to ASTM D2564 standard. CSA certified for PVC pressure and non-pressure applications.

Extra heavy-bodied, slow setting, PVC cement for all classes and schedules through 750 mm (30") diameter, including Sch. 80 and System 15 in sizes 350 mm – 600 mm (14" – 24"). It is a good fabrication cement, as it has excellent gap filling properties, and because of its slow set, it is ideal for hot weather cement on large diameter pipe.

gallon	3785 ml	074387
--------	---------	--------

XIRTEC 24 CPVC CEMENT

ORANGE ■

LOW VOC, 2 Year Shelf Life

NSF listed to ASTM F493 standard for potable water and sewer pipe.

Heavy-bodied, medium setting, CPVC cement for all classes and schedules through 300 mm (12") diameter. Formulated for improved chemical resistance to caustics including hypochlorite solutions. May be used on PVC industrial piping systems for chemical applications. Approved for Xirtec CPVC Industrial Systems.

DURAPLUS ABS INDUSTRIAL CEMENT

GREY ■

LOW VOC, 1 Year Shelf Life

Medium-bodied, fast setting ABS cement for all sizes and products in the Duraplus Industrial line. The Grey Duraplus ABS solvent cement is manufactured from ABS particles identical to the material used for the manufacturing of Duraplus Industrial components. The cement is designed to withstand continuous applied pressures up to 230 psi @ 23°C (73°F). Duraplus MEK primer must be used prior to cementing.

pint	473 ml	337085
quart	946 ml	337084

DURAPLUS AIR-LINE CEMENT

LIGHT BLUE ■

LOW VOC, 1 Year Shelf Life

Medium-bodied, fast setting ABS cement for all sizes and products in the Duraplus Air-Line. Duraplus ABS solvent cement, is manufactured from ABS particles identical to the material used for the manufacturing of Duraplus Air-Line components. The cement is designed to withstand continuous applied pressures up to 185 psi @ 23°C (73°F). Duraplus MEK primer must be used prior to cementing.

pint	473 ml	437037
quart	946 ml	437038

DURAPLUS MEK CLEANER

CLEAR □

Duraplus MEK Cleaner/Primer must be used prior to solvent welding of any Duraplus and IPEX industrial ABS piping systems.

IPEX 25 WET/DRY PVC CEMENT

AQUA BLUE ☒

LOW VOC, 3 Year Shelf Life

Meets the requirements of ASTM D2564 for use with PVC pipe and fittings. NSF and IAPMO listed for potable water and sewer pipe.

Medium-bodied, extremely fast setting PVC cement for pipe sizes through 150 mm (6") interference fit, Sch. 80 through 100 mm (4"). Specially formulated for rigid and flexible applications where conditions are very wet and/or when quick pressurization is desired.

1/2 pint	236 ml	074392
pint	473 ml	074393
quart	946 ml	074394

IPEX 47 POOL/SPA PVC CEMENT

BLUE - Blue fades to clear ☒

LOW VOC, 3 Year Shelf Life

Meets ASTM D2564. CSA certified for joining flexible PVC pipe to rigid PVC fittings used in hydromassage bathtubs. NSF and IAPMO listed for potable water and sewer pipe.

Medium-bodied, extremely fast setting, for PVC pipe sizes through 150 mm (6") interference fit, Sch. 80 through 100 mm (4"). Developed for rigid & flexible applications, wet conditions and/or when quick pressurization is desired.

quart	946 ml	074139
-------	--------	--------

IPEX 5 WET/DRY PRIMER

AQUA BLUE ☒

3 Year Shelf Life

Meets the requirements of ASTM F656 for use with PVC pipe and fittings. NSF listed for potable water and sewer pipe.

Very fast acting primer especially formulated for use with IPEX 25 Wet/Dry cement. Excellent primer for wet applications or when quick penetration of pipe and fitting surfaces is desired. Can also be used with any other PVC or CPVC cement.

IPEX 95 FLEX PVC CEMENT

CLEAR ☐

Low VOC, 3 Year Shelf Life

Meets ASTM D2564. NSF and IAPMO listed for potable water and sewer pipe.

Medium-bodied, fast setting, for bonding flex/flex and flex/rigid PVC pipe and fittings through 150 mm (6") diameter interference fit, Sch. 80 through 75 mm (3") only. Excellent product for flex/rigid applications. It has an elastomer in the formulation which allows a more flexible joint.

1/4 pint	118 ml	074440
1/2 pint	236 ml	074163
quart	946 ml	074412

IPEX 96 ABS/PVC CEMENT

WHITE ☐

3 Year Shelf Life

CSA certified for nonpressure ABS/PVC systems only. Meets ASTM D3138.

Regular-bodied, fast setting, FOR TRANSITION JOINTS ONLY IN NON-PRESSURE SYSTEMS. Pipe sizes through 150 mm (6") interference fit. Not for Sch. 80. Suitability of IPEX 96 should be verified for specific ABS/PVC materials.

AQUARISE CPVC TWO-STEP CEMENT W/PRIMER

YELLOW 

LOW VOC, 2 Year Shelf Life

AQUARISE TWO-STEP CEMENT meets ASTM F493. ANSI/NSF Standard 14 & 61 listed for potable water. Certified to CSA B137.6.

Heavy-bodied, for use on 63 mm, 75 mm & 100 mm (2-1/2", 3" & 4") diameters only.

MUST BE USED IN CONJUNCTION WITH AQUARISE CPVC PRIMER.

CLEAR 

LOW VOC, 2 Year Shelf Life

AQUARISE CPVC PRIMER meets ASTM F656. ANSI/NSF Standard 14 & 61 listed for potable water, drain waste & vent & sewer.

AquaRise CPVC Primer will soften pipe and fitting surfaces which is necessary for the proper solvent welding of the materials. Approved for use with AquaRise in potable water applications. For use on 63 mm, 75 mm & 100 mm (2-1/2", 3" and 4") diameters only.

About the IPEX Group of Companies

As leading suppliers of thermoplastic piping systems, the IPEX Group of Companies provides our customers with some of the world's largest and most comprehensive product lines. All IPEX products are backed by more than 50 years of experience. With state-of-the-art manufacturing facilities and distribution centers across North America, we have earned a reputation for product innovation, quality, end-user focus and performance.

Markets served by IPEX group products are:

- Electrical systems
- Telecommunications and utility piping systems
- Industrial process piping systems
- Municipal pressure and gravity piping systems
- Plumbing and mechanical piping systems
- Electrofusion systems for gas and water
- Industrial, plumbing and electrical cements
- Irrigation systems
- PVC, CPVC, PP, PVDF, PE, ABS, and PEX pipe and fittings

Products are manufactured by IPEX Inc.

Blue904®, Drain-Guard™, DRAIN-WAY®, Gold901™, MJ Grey™, Peace of Mind from the Ground Up™, Pipe-with-the-Stripe®, Q-Line®, RadonX™, System 15®, System XFR®, System 636®, UCVK™, and Xirtec® are trademarks used under license.

AquaRise® and the colour of the AquaRise® pipes and fittings are registered trademarks. Distributed in Canada by IPEX Inc., Mississauga, Ontario.

RadonX™ Soil Gas Venting pipe, fittings and venting accessories are manufactured by IPEX Inc. and/or IPEX USA LLC and RadonX piping system is distributed in Canada by IPEX Inc., Mississauga, Ontario.

Xirtec® CPVC piping systems are made with Corzan® CPVC compounds. Corzan® and BlazeMaster® are registered trademarks of The Lubrizol Corporation.
