Model A-158A
3/8" C x 3/4" Hose

Dishwasher Hose Fitting & Connector Kits

When Whirlpool®, the leading manufacturer of residential dishwashers, designed a new inlet water valve for their appliances they chose Watts as a partner to develop, manufacture, and distribute the right fitting to get the most out of their new design. Whirlpool wanted a dishwasher fitting that would be easier to install, requiring less torque to obtain a more consistent seal. They chose Watts as the preferred provider of this new style dishwasher fitting and associated connector installation kits.

The new dishwasher fitting is 3/8" Compression x 3/4" Female Hose Thread and is available in dishwasher installation kits or as a stand alone part.

Recent Changes to Dishwasher Inlet Water Valve and Hose Fitting Improve Installations!

WATTS®

New Dishwasher Hose Fitting Benefits

- Fitting is easier to align and attach than current fitting
- Fitting saves installers time and effort with improved quality
- Fitting requires less torque and no Teflon® tape or putty to obtain a seal
- Resulting seal is more uniform and reliable

Whirlpool® inlet valve change is for all 24" built-in standard and tall tub dishwashers (Whirlpool®, Maytag®, KitchenAid®, JennAir®, Amana®, Magic Chef®, Estate®, Inglis®, Roper™, IKEA®, Crosley®, and Kenmore®/Kenmore Elite™) manufactured by Whirlpool Corporation. This change does not affect Dish Drawers, Portable Dishwashers, and ADA Dishwashers.

The current fitting is 3/8" MIP connection while the new fitting is a 3/4" female hose connection. The valve change will occur September 2009 for tall tub dishwashers and October 2009 for standard tub dishwashers. The current fitting and installation kits will remain available for dishwashers that will not be affected by this inlet valve change.

The new A-158A Watts® Dishwasher Hose Fitting and Installation Kits listed below are available through your local distributors.
