FLOWING EXPERTISE

With our heating and plumbing solutions, we have been redesigning the comfort of the spaces we live and work in for over 60 years. This is thanks to the flow of expertise, technology, experience and innovations that we have acquired over the years by constantly exchanging ideas with our customers and suppliers. A flow that pushes boundaries, allowing us to constantly set the benchmark. A flow that allows us to always look one step ahead into the future.

FLOW OF LIFE

A unique way of flowing.
It is **continuous change**, a high degree of reliability in our work, and the ongoing pursuit of total quality, which is the result of small daily actions.

FUTURE

Innovation aimed at creating **new forms of comfort** for spaces, which motivates us to continue to grow and improve.

SUSTAINABILITY

Our focus on preserving **environmental, social and economic well-being** so that it can be passed on to future generations through our products and processes.

TECHNOLOGY

Our ability to do research, invest in processes and develop **state-of-the-art solutions** in an ever-evolving world of expertise.

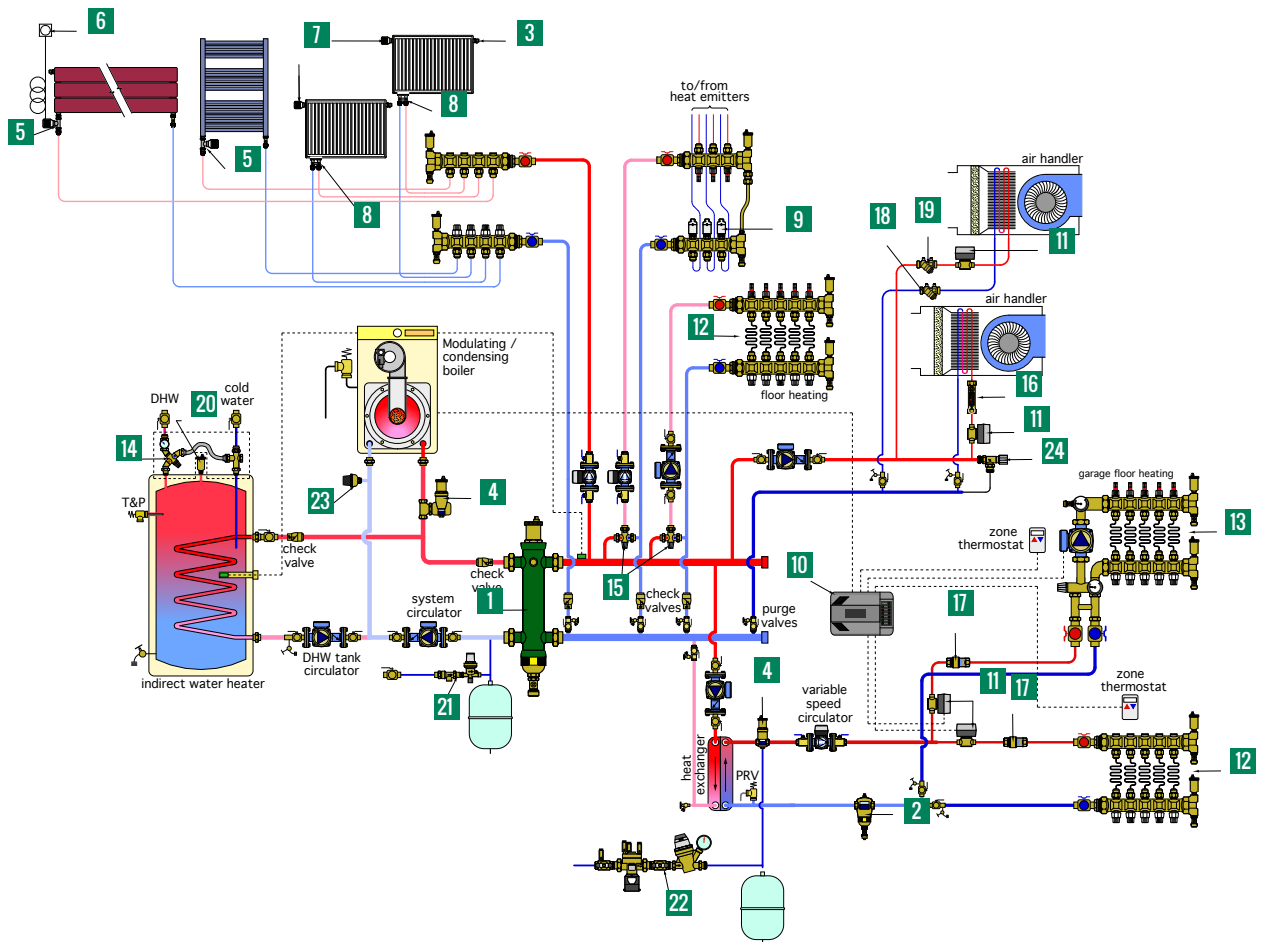

MADE IN CALEFFI

A uniqueness consisting of many details, which is what we are known for worldwide. True **"Made in Italy"** quality, the hallmark of our company.

EXPLORE OUR EXCELLENCE IN EDUCATION

Caleffi is committed to providing not only high quality and innovative products but also delivering **outstanding educational resources** to aid in heating, cooling and plumbing system design, configurations and problem solving. We are flexible to assist with customized or hybrid training. For more information, visit caleffi.com or contact us at marketingadmin@caleffi.com. **CALEFFI GUARANTEED.**

AWARD-WINNING PLUMBING INNOVATION

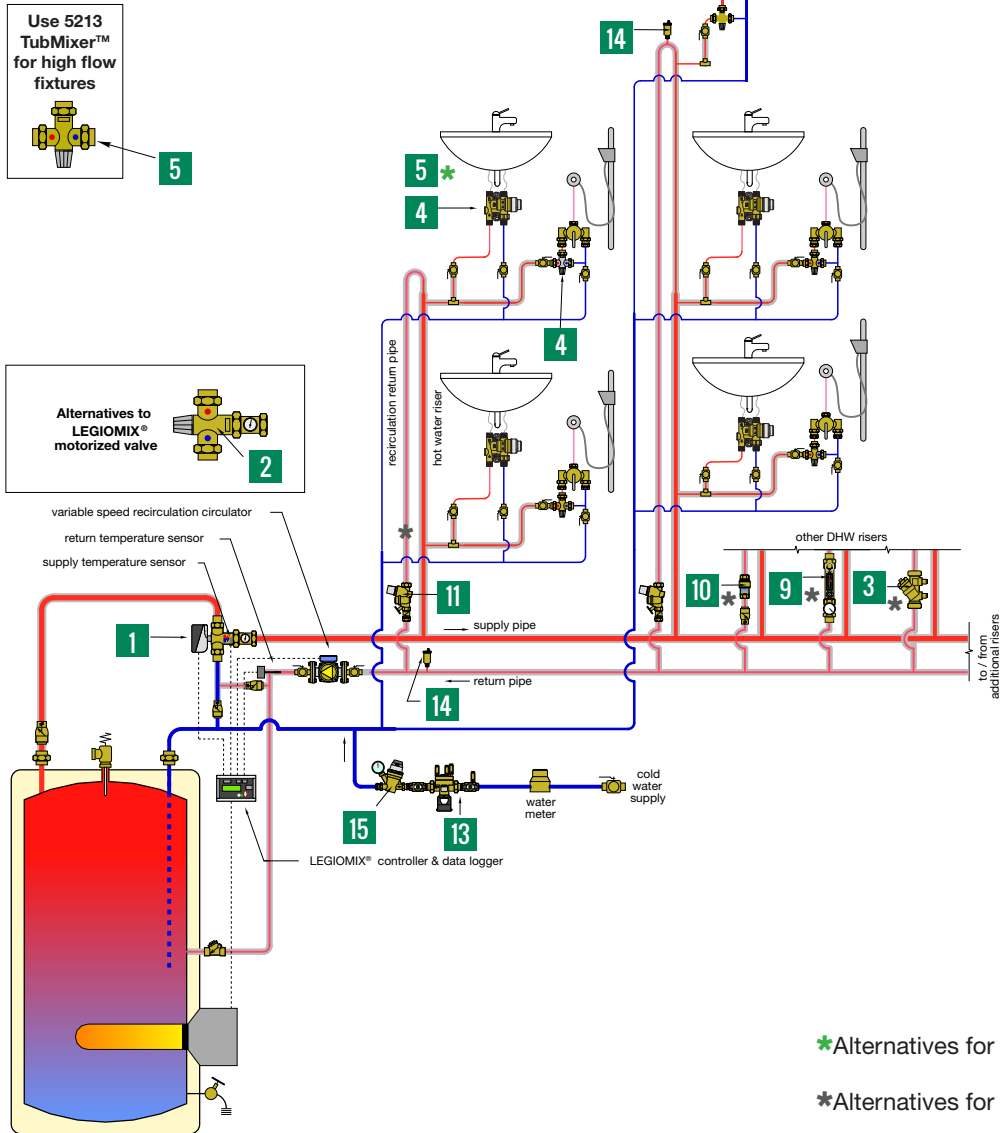

We are honored to be recognized by the AHR Innovation Award judges over the years. Caleffi's success is based on listening to the marketplace combined with a total commitment to quality. The result? Creative product design, superior performance and support that exceeds our customers' expectations. **CALEFFI GUARANTEED.**

NA549 SEP4™ ASME

Combination 1. air, 2. hydraulic, 3. dirt separation, 4. magnetic separation.

Three neodymium magnet assemblies.
Complete with:
automatic air vent (code 501502A).
air vent shut-off valve (code NA39589).
drain valve (code NA59600).
ANSI 150 flange connections.
Thermometer pockets (NPT):
1/2" inlet/outlet flanges, 3/4" front center
Max. working pressure: 150 psi.
Vessel temperature range: 32°–270°F.

In the SEP4™ hydraulic separators ferrous impurities are captured by a concentrated magnetic field created by a stack of neodymium magnetic rods, rare-earth magnets positioned inside a brass dry-well which is below the flow stream. Non-magnetic dirt particles are separated by colliding with an internal element in the flow stream and settling to the bottom. The deep collection chamber keeps the dirt from re-entering the flow stream. The dirt and ferrous impurities are flushed out even while the system is still running, by removing the magnets and opening the purge valve.

GOLD STANDARD KIT™ FOR HEALTHY HYDRONIC SYSTEM FLUIDS

KIT INCLUDES:
DIRTMAG® PRO
and DISCAL®

**Kitted for
\$avings!**

Make a smart choice by selecting **The Gold Standard Kit™** for clean hydronic systems to ensure maximum protection and efficiency. The Kit includes two product favorites that effectively eliminate three problems:

The **DISCAL®** high efficiency air separator is dedicated to removing the system culprit: ① **excessive oxygen** resulting in the formation of **corrosion**. The **DIRTMAG® PRO** dirt separator with magnetic technology and particle mesh captures troublesome ② **magnetic** and ③ **non-magnetic debris**. **CALEFFI GUARANTEED.**

Brass body.

Maintaining the "health" of water based solutions that circulate through a hydronic system is of critical importance for its operation and protection of components. It is accomplished by preventing oxygen from reacting with ferrous materials resulting in corrosion and by removing ferrous and non-ferrous debris that are damaging to the system.

Rest assured. The **GOLD STANDARD** kit conveniently accomplishes these tasks. Separation with **NO** Compromise. **CALEFFI GUARANTEED.**

The DISCAL air separator keeps dissolved oxygen concentration below the level that can cause corrosion with ferrous materials. It has a unique bell shape geometry that slows the fluid velocity down by a 9 to 1 ratio. Coupled with a specially engineered coalescing mesh, the action forces micro-bubble gasses to be efficiently collected and automatically vented from the system. When properly placed within the system, DISCAL keeps the concentration of dissolved oxygen low, thus preventing unimpeded ferrous formation.

Protect the boiler (or chiller) with a magnetic dirt separator that collects not only ferrous but also non-ferrous debris. Problematic non-ferrous debris includes copper shavings, pipe tape, pipe sealant and solder. Piping and other equipment stored outside can collect dirt, silica, dust and insects. Calcium scale that forms and breaks off within a system is also non-ferrous. All of these non-ferrous debris types are not captured by a magnet. With the DIRTMAG PRO, purging the debris is easy, non-messy and doesn't require shutting down the system. Simply remove the top magnetic rod and the lower magnetic collar and open the drain valve to purge the captured impurities.

Air separator construction

DISCAL® air separators are constructed to allow maintenance and cleaning operations to be carried out without having to remove the separator body from the pipe work. All DISCAL air separators have a bottom connection drain valve. All internal air release control components are fully accessible. The automatic air release valve, located at the top of the separator, has a long chamber for the movement of the float. This feature prevents any debris present in the water from reaching the sealing seat.

Flanged models include a side drain vent to release large amounts of air when filling the system and to remove any debris present above the water level.

Low head losses and high performance are maintained over time. The dirt separating action performed by the **DISCALDIRT®** air and dirt separator is based on using the internal element with concentric diamond pattern mesh surfaces instead of an ordinary filter. The element offers little resistance to the medium flow while ensuring dirt separation. These air and dirt separators are ideal for chilled water applications.

In the **DISCALDIRTMAG™** air and dirt separator with magnets, ferrous impurities are captured by a concentrated magnetic field created by a stack of neodymium rare-earth magnets positioned inside a brass dry-well which is below the flow stream. Non-magnetic dirt particles are separated by colliding with an internal element in the flow stream and settling to the bottom. The deep collection chamber keeps the dirt from re-entering the flow stream. The dirt and ferrous impurities are flushed out while the system is operating, by removing the magnets and opening the purge valve.

Construction design

The DIRTMAG® PRO incorporates patented technology and features dual magnetic fields that increase ferrous debris removal efficiency by 40%. The concentric pattern collision media inside the low-velocity zone efficiently separates non-ferrous debris. All debris is quickly purged from system via the blow down valve. No disassembly or scraping of magnetite from immersed magnets is required, which means clean hands, fast, and easy servicing.

Double the protection

Captures two forms of debris that can damage or shorten the life of heat exchangers, circulators and valves: ferrous debris such as magnetite, and non-ferrous debris such as copper shavings, solder, lime-scale fragments, silica and pipe compound. Two powerful neodymium rare-earth magnetic fields attract and capture ferrous oxide impurities and allow simple blowdown - no disassembly required.

Combine the **DIRTMAG® PRO** with a **DISCAL®** air separator for **The Gold Standard Kit** found on page 18.

Construction design

The dirt separator with magnet combines the action of the internal element and magnet. The impurities in the water strike the internal element and are separated, dropping into the bottom of the body where they are collected. Ferrous impurities are also trapped inside the dirt separator body by two strong magnets contained within the removable outer ring collar. The collected impurities are discharged by removing the external ring magnet and opening the drain valve.

MAGNETIC DIRT SEPARATORS

Ferrous and non-ferrous impurities in hydronic systems can deposit onto heat exchanger surfaces and accumulate in pump cavities causing reduced thermal efficiency and premature wear. The small and often microscopic magnetic particles, called magnetite, form when iron or steel corrodes. Highly abrasive, the extremely fine particles are difficult to remove by traditional means. DIRTMAG® separators offer highly efficient separation of typical dirt as well as magnetite. The magnetite is captured by a concentrated magnetic field created by a stack of neodymium rare-earth magnets positioned inside a brass dry-well which is below the flow stream. Non-magnetic dirt particles are separated by colliding with an internal element in the flow stream, settling to the bottom. The deep collection chamber keeps the dirt from re-entering the flow stream.

To purge the debris, the flexible magnetic stack is removed from the brass dry-well and, even while the system is still running, the drain valve can be opened. Aided by the system pressure, the dirt and magnetite flushes out quickly and effectively. DIRTMAG magnetic dirt separators accomplish 2½ times the ferrous impurities removal performance of standard dirt separators, delivering up to 100% elimination efficiency.

MINICAL™ and VALCAL™

These float type automatic air vents are designed to vent released air from the water while being heated. They are used on manifolds or pipes in sealed heating systems.

MINICAL is a standard size air vent that will discharge up to 1.75 SCFM.

VALCAL is a high capacity larger size air vent that will discharge up to 2.5 SCFM.

Some MINICAL and VALCAL models are equipped with a hygroscopic safety cap. Cellulose fiber discs in the cap serve as a redundant seal. Their volume increases by 50% when wet, sealing the discharge vent.

Some MINICAL and VALCAL models are equipped with a service check valve which facilitates maintenance operations by shutting off the water flow when the air vent is removed and also allows an easy replacement of the air vent without purging the system.

Function

DISCALAIR® automatic air vents release air that forms in the hydraulic circuits of heating and air conditioning systems with pressures to 150 psi. The venting air discharge capacity is capable of expelling over 4 standard cubic feet per minute (SCFM). The circulation of fully de-aerated water or glycol-water mediums enables the equipment to operate under optimum conditions, free from noise, corrosion, localized overheating, or mechanical damage.

5080 HYGROCAL™

Automatic hygroscopic air vent for hydronic heating system and low pressure steam. Manual operation by rotating knob. Chrome plated brass body.
Max. working pressure: 150 psi.
Max. working temperature: 212°F.
Low pressure steam: 15 psi.

Automatic radiator air vent valve is designed to remove any air trapped inside the heat emitters both during the filling of the system and in normal operation. The automatic air discharge happens when the hygroscopic cellulose fiber discs are dry. As air is vented and water contacts the hygroscopic discs, they increase their volume by 50% which causes the discharge vent to close.

THERMO-ELECTRIC ACTUATOR

6564

Thermo-electric actuator for electric control of radiator valves. Fits valves 220, 221, 338 and 339 Series. Protection class (installed in all positions): NEMA 3 (IP54). Power supply: 24 V AC/DC. Initial current draw: ≤ 250 mA. Power consumption: holding: 3 W, inrush: 6 VA. Rating of micro-switch contacts: 5 A (24 V). 31.5" wire lead connection.

Code	Description	Lbs	USD
656404	24 V AC/DC	0.4	82.80
656414	24 V AC/DC with microswitch	0.4	105.00

Function

The control mechanism of the thermostatic radiator valve is a proportional temperature controller, composed of a liquid filled bellows. With increasing temperature the liquid expands which, causes the bellows to expand. When the temperature decreases the opposite occurs; the bellows contract allowing the spring to return it to the original position. By connection to the valve stem, these movements adjust the heat transfer medium to the radiator.

*Head shown vertical for illustration only, it should be installed horizontally.

Key features

The thermostatic control head is filled with a non-compressible liquid bellows (1). Plus, the radiator valve body has an extra strong valve stem compression spring (2). The non compressible liquid provides the force required to compress the strong valve stem spring. When the temperature decreases, the liquid bellows contracts, which allows the valve stem spring to lift the valve plug from valve seat after long periods of non-movement. This ensures that after a long off-season, when the actuator operates for the first time, the spring reliably lifts the valve plug off the seat without sticking. In addition, the 200000 control head features an easy-to-use locking mechanism that prevents unauthorized temperature set point changes and a range stop adjustment that limits the maximum temperature setting to save energy and over-heating.

CONNECTION VALVES FOR PANEL RADIATORS

Caleffi panel radiator valves are designed to be connected to the bottom of panel radiators. They come in two versions: for two-pipe and one-pipe systems. Both are available straight (pipes exiting the floor) and angled (pipes exiting the wall). The two-pipe version is equipped with two ball shut-off valves. The one-pipe, in addition to the shut-off valves, is equipped with an adjustable by-pass which diverts from 30% to 50% of the flow rate towards the radiator, and a flow check valve device (1) prevents thermo-syphoning upward into radiator from by-passing flow.

3010

PRESSURE INDEPENDENT CONTROL VALVES (PICV)

2nd QTR

145 FLOWMATIC® NPT

Pressure independent control valve.
Flow rate is adjusted in two different ways:
- manually on the automatic flow rate regulator, to restrict the maximum value
- automatically by the control valve in combination with a proportional (0–10 V) or ON/OFF actuator, in accordance with the thermal load requirements of the circuit being controlled.

COIL KITS

2nd QTR

149 FLOWMATIC® Express Coil Kit

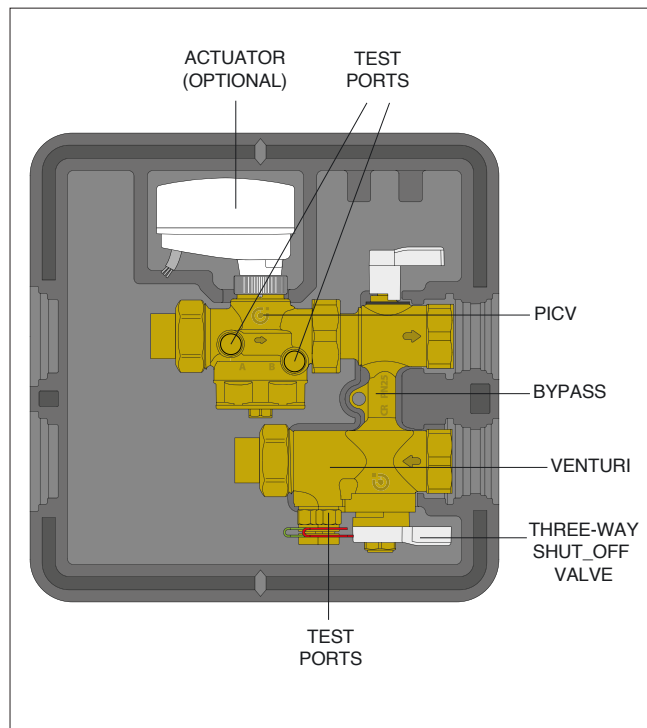

Connection and regulation kit for HVAC terminal units. Dezincification resistant alloy body. Complete with:

- pressure independent control valve,
- three-way shut-off valves,
- integrated by-pass,
- Venturi device with pressure test ports.
- filtering cartridge,
- pre-formed insulation shell.

Max. working pressure: 360 psi.
Temperature range: 14° — 248°F.
Max. percentage of glycol: 50 %.
Δp range (PICV): 3.6 - 58 psi.
Compatible with 145 and 6565 Series actuators on page 38.

Construction design

The pre-assembled kit for terminal units is compact and enables control, balancing, testing and servicing the secondary circuit. It allows the connection of fan-coils, chilled beams or ceiling-mounted air-conditioning systems with the main distribution system. It also allows for maintenance and setting operations of the system. Complete with insulation suitable for both heating or cooling and venturi device for flow rate measurement at test ports.

Construction design

The pressure-balanced valve, code 676500A, has a special valve plug that can work at high differential pressures. As shown in the figure, the thrust towards the opening is counterbalanced by the force created by the pressure acting on the internal surface of the valve plug. This feature reduces the thrust needed to close the valve plug resulting in higher close-off pressure.

Function

The Z-one™ valve is a truly universal zone valve that can be used in a wide range of commercial and residential applications; from fan coils to baseboard, radiant to high rise, the Z-one is the professional's valve of choice. The Z-one can be used in both chilled or hot water and low pressure steam applications. With Delta P close off pressures of up to 75 PSI, the Z-one outperforms all other zone valves. The Z-one is available in sizes from 1/2" to 1 1/4" sweat or NPT connections on valve body, with removable actuator available in 24 to 120 voltages.

Some models of Z-one actuators contain an auxiliary micro-switch to operate other devices. The 24 V actuators use a sealed reed switch, which has been produced specifically for use with relays, boiler contacts (TT) and DDC systems. It requires no minimum current load. The 120 V actuators for applications requiring greater than 400 mA, use a conventional micro-switch with silver contacts. The auxiliary switch is activated when the valve is 60% open or when the actuator is manually opened.

• Manual opening (Normally closed actuator only)

The valve can be opened manually by moving the lever for opening it. When the power is restored the manual control is automatically overridden. The auxiliary switch in 24 V actuators is tripped when the unit is put into manual open position. This helps during start up to check if the wiring is correct without firing the valve electrically with the thermostat.

• Auxiliary micro-switch

The actuator contains an auxiliary microswitch to operate other devices. The 24 V actuators use a sealed reed switch, which has been produced specifically for use with relays, boiler contacts (TT) and DDC systems. It requires no minimum current load. The 120 V actuators use a conventional micro-switch with silver contacts. The auxiliary micro-switch is activated when the valve is 60% open or when the actuator is manually opened.

PUMP ZONE CONTROLS

Certified to CSA C22-2 No.24
Conforms to UL Standard 873

ZSR Z-one Relay

The ZSR Series is multi-zone pump and boiler operating control for multiple zone hydronic heating systems. The ZSR Series interfaces with low voltage thermostats or any other low voltage controllers having a switching action. The ZSR Series controls up to 3, 4, 5 or 6 heating circulator pumps, depending on model selected, a primary pump, and has LED indicators to provide functional status and easy system troubleshooting. In addition, a primary pump system circulator is switched on whenever any zone calls for heat.

Power supply: 120 VAC, 50/60 Hz

Transformer voltage: 24 VAC

Maximum transformer load: 12 VA (ZSR101/103/104), 20 VA (ZSR106)

Electrical switch rating: 10A (ZSR101), 20A (ZSR103/4) max combined

Electrical switch rating pump output: 120 VAC, 5A each

Dry contact rating: AUX, XX, ZONE1 E/S: 120 VAC max, 2A each

Replaceable fuses: Type 2AG, 5A slow blow

The ZVR Series is a multi-zone valve relay and boiler operating control for multiple zone hydronic heating systems. The ZVR Series interfaces with low voltage thermostats or any other low voltage controllers having a switching action. The ZVR Series controls up to 3, 4, 5 or 6 zones, depending on model selected. In addition, a system circulator pump and secondary pump is turned on whenever any zone calls for heat. LED indicators provide functional status and easy system troubleshooting. The ZVR Series is a perfect match with Caleffi's Z-one™ motorized zone valves.

Power supply: 120 VAC, 50/60 Hz

THERMOSTATIC MANIFOLD MIXING STATIONS

172

Low temperature manifold mixing station three speed pump

Pre-assembled thermostatic manifold mixing station consisting of a supply distribution manifold complete with built-in sight flow gauges and adjustable balancing valves. Return manifold with built-in shutoff valves is suitable for thermo-electric actuators. Complete with built-in sensor to keep flow temperature at constant set value.

Includes Grundfos UPS 15–58 three-speed pump.

¾" F NPT supply/return ball valves.

Max. working pressure: 150 psi.

Control temperature range: 80°–130°F.

Primary inlet max. temperature: 195°F.

Outlet center distance: 2 in.

PT Gauge: (40°–240°F, 10°–110°C) (0–10 bar; 1–140 psi)

Models with "...IN" suffix are built inverted (tubing connections going upward).

THERMOSTATIC MANIFOLD MIXING STATIONS

Characteristic components / hydraulic diagram

Function

The 172 Series manifold mixing station is designed for use in manifold-based hydronic distribution systems. The manifold mixing station incorporates a thermostatic actuator with built-in sensor which keeps the flow temperature at a constant set value for use in low temperature systems such as floor radiant panels. (7) A removable, primary circuit hydraulic separator with check valve is also supplied. The hydraulic separator is essential when there is a primary circuit circulation pump and when radiator circuits or fan coils are controlled by

thermostatic or thermo-electric valves. When connecting to a Caleffi HydroLink™ or hydraulic separator without a primary pump, the hydraulic separator can be removed and the manifold mixing station can be connected directly. The 172 station, like the TwistFlow™ Series 668S1 distribution manifolds, can be configured with 3 to 13 circuit outlets offering similar benefits with built-in sight flow meters/adjustable balancing valves and optional TwisTop™ thermo-electric zone actuators.

THERMO ELECTRIC ACTUATORS FOR MANIFOLDS AND VALVES

6563 TwisTop™

TwisTop™ thermo-electric actuator.
Twist the top to manually open.
Power supply: 24 V AC/DC.
Initial current draw: ≤ 250 mA.
Power consumption: 3 W.
Rating of micro-switch contacts: 5 A (24 V).
31 1/2" wire lead connection.

CUTTING-EDGE INNOVATION IN TEMPERATURE MIXING

Caleffi mixing valves lead the way. From $\frac{3}{8}$ " under-sink scald protection valves to 3" flanged digital master mixing valves, a full selection is available for residential and commercial plumbing and hydronic applications. **Over 60 years of innovation and global experience** assure high quality and proven reliability. A wide selection of double union connection types work with copper, iron, stainless steel and non-metallic pipes. **Approvals include compliance with U.S. and Canadian plumbing codes. CALEFFI GUARANTEED.**

THERMOSTATIC MIXING VALVES FOR PLUMBING AND HYDRONICS

521 MixCal™ sweat

Adjustable thermostatic mixing valve for point of distribution in domestic water systems and radiant hydronic heating systems.
Low-lead brass body.
Locking set point knob.
Max. working pressure: 200 psi.
Max. inlet temperature: 200°F.
Adjustable range: 85°—150°F.
Min. flow for optimum performance: 1.0 gpm.
(0 gpm with recirculation)

THERMOSTATIC MIXING VALVES FOR PLUMBING AND HYDRONICS

520 AngleMix™ sweat

Body is DZR low lead brass with gauge.
Adjustment temperature range: 95° — 150°F.
Max. body pressure rating (static): 150 psi.
Max. working pressure (dynamic): 75 psi.
Max. inlet temperature: 195°F.
Gauge scale: 30° — 210°F.
Min. flow for optimum performance: ½" and ¾" valves 0.5 GPM, 1" valves 1 GPM.

Construction details

Anti-scale materials The material used in the construction of the Caleffi AngleMix 520 Series thermostatic mixing valve reduces jamming caused by lime deposits. All the working parts such as shutter, seats and slide guides are made of a special anti-scale polymer material, with a low friction coefficient, assuring long term performance.

Meets requirements of NSF/ANSI/CAN 372. Complies with ASSE 1017, CSA B125.3, UPC, IPC, Low Lead Laws and listed by ICC-ES for use in accordance with the U.S. and Canadian plumbing codes.

SCALD PROTECTION THERMOSTATIC MIXING VALVES FOR PLUMBING

5212 SinkMixer™ 4-way Scald Protection Point of use

Thermostatic mixing valve for under sink and under counter applications where the user must be protected from the danger of scalding caused by excessively hot water. Temperature adjustment range: 95° – 120°F. Cold inlet temperature: Min. 39°F; Max. 85°F. Hot inlet temperature: Min. 120°F; Max. 195°F. Min flow for optimum performance 0.35 gpm. Flow at 20 psid: 2.3 gpm. Complies with NSF/ANSI/CAN 61. Cv = 0.52

ELECTRONIC MIXING VALVES FOR PLUMBING

6000 LEGIOMIX® sweat

Electronic mixing valve with optional selectable programs for thermal disinfection of hot water recirculation system to kill Legionella bacteria.

Power: 24 VAC +/- 10% - 50/60 Hz - 6 VA.
115/24 VAC transformer included.
Adjustment temperature range: 70°—185°F.
Disinfection temperature range: 100°—185°F.
Max body pressure rating (static): 230 psi.
Max operating pressure: 150 psi.
Max. inlet temperature: 212°F.

ELECTRONIC MIXING VALVES FOR PLUMBING

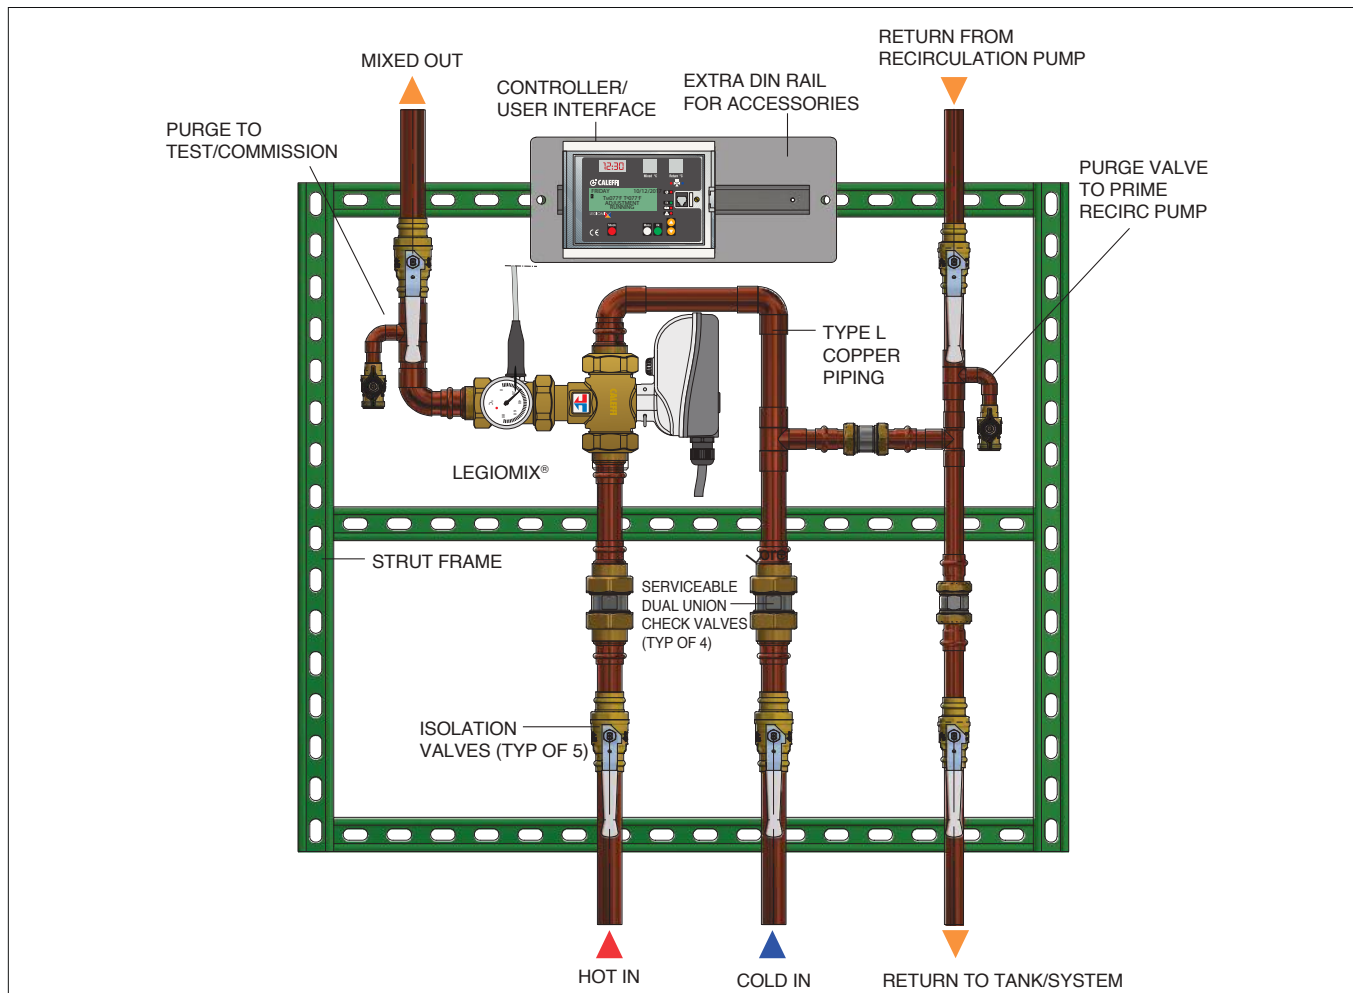

6000 LEGIOMIX® Station

Electronic mixing valve pre-packaged in a convenient wall mount configuration. 100% factory tested for plug-and-play in a packaged wall mount configuration.

Station assembly includes pre-piped 3-way mixing valve with union connections, serviceable check valves, a recirculation connection and isolation valves for fast and simple installation, all mounted on welded, powder-coat painted steel strut. The LEGIOMIX® controller/user interface with DIN rail mounting bracket is pre-mounted and pre-wired and includes a return water temperature sensor. Simply wall mount the assembly, hook up the hot and cold water supplies, the mixed outlet and the recirculation circuit. Plug in 120/24 VAC transformer with 20 ft cable included.

The TankMixer Kit takes your tankless water heater to the next level with service valves that allow for easy flushing of the heat exchanger. With the included pressure relief valve and TankMixer mixing valve you can also ensure safe operation of your tankless water heater and accurate temperature control to your fixtures.

Meets requirements of NSF/ANSI/CAN 372. Certified to ASSE 1017, CSA B125.3, UPC, IPC, Low Lead Laws and listed by ICC-ES for use in accordance with the U.S. and Canadian plumbing codes.

THERMOSETTER™

THERMAL BALANCING SET IT AND FORGET IT

ThermoSetter™ thermal balancing valves maintain precise temperature in recirculation return piping using state-of-the-art modulating control. **Setup is simple** and safe with an easy-to-read, lockable temperature adjustment dial. Enjoy **ease of maintenance** with serviceable cartridge. Models with bypass cartridges available for systems that provide thermal disinfection to control **Legionella bacteria**. Factory assemblies with isolation and check valves are available. **Approvals include compliance with the U.S. and Canadian plumbing codes. CALEFFI GUARANTEED.**

The 132 Series balancing valve accurately sets the flow rate of heating and cooling transfer fluid. The flow meter is housed in a bypass circuit on the valve body and can be shut off during normal operation. The flow meter permits fast and easy circuit balancing without added differential pressure gauges and reference charts.

Operating Principal

The 130 Series balancing valve is a hydraulic device that controls the flow rate of a fluid. Turning the knob moves a plug within the fluid stream which varies the flow rate. The flow rate is determined according to the pressure drop value measured by a differential pressure meter connected to the pressure test ports.

Construction details

The Y-body 128 Series FlowCal uses the same flow cartridges as the 127 Series FlowCal. Because the body can remain in the piping, the Y-body simplifies serviceability and cartridge changeout. The 128 Series includes factory installed PT ports.

Complies with NSF/ANSI/CAN 372, low lead laws, for use in accordance with the U.S. and Canadian plumbing codes. U.S. Patent 7,246,635 B2.

Connecting Device

Integral pressure temperature ports allow for quick confirmation of differential pressure to ensure that the valve is functioning within its control range.

Replaceable cartridge

The internal regulator is assembled in the form of a self contained cartridge so as to permit easy removal from the body for inspection or replacement. It is equipped with a special automatic fixing system with wire and an operating ring for fast and safe positioning without using tools.

Complies with NSF/ANSI/CAN 372, low lead laws, for use in accordance with the U.S. and Canadian plumbing codes. U.S. Patent 7,246,635 B2.

PRESICAL™ PRVS

PRECISION ENGINEERED FOR DURABLE PERFORMANCE

The **PresCal™** pressure reducing valve family is constructed of dezincification-resistant low lead brass and low friction moving parts that stand up to hard water and scale for maximum durability. The diaphragm models as well as the new **true piston** models feature a service-friendly **removable cartridge** with integral stainless steel mesh strainer that makes cleaning or rebuilding **fast and easy**. **Approvals include compliance with U.S. and Canadian plumbing codes. CALEFFI GUARANTEED.**

Function

The PresCal™HP 536A Series pressure reducing valve is a high performance true piston-type PRV that can withstand the punishing conditions of water hammer while ensuring high pressure reduction and control. Models 536x3A, with set point adjustment range 90 to 150 psi, provide the first stage of pressure reduction in a two-valve Series where the pressure ratio between the inlet and outlet would be too high for single PRV to control. Models 536x4A, also a piston PRV, comply with ASSE 1003, CSA B356, have a standard adjustment range of 10 to 90 psi and the all-metal design makes them ideal for outdoor locations and irrigation pressure control.

Pressure compensating

Caleffi 536A Series pressure reducing valves are designed with a pressure balanced seat/plug. This ensures precise and constant controlled outlet pressure despite upstream pressure fluctuations. In the figure, the thrust towards the opening is counterbalanced by the force created by the closing pressure acting on the compensating piston. Since the piston has a surface area equal to that of the valve plug, the two forces cancel out each other.

Function

Caleffi 574 Series RPZ backflow preventers have dual unions for simple removal of the body for service or rebuilding. Access to the internal components from the top is also easy without removing the valve from the piping, if desired. Rebuild parts are available by ordering a single part number kit, for each size RPZ. The PT ports are located on top for easy access whether flow is right-to-left or left-to-right.

Function

The backflow preventer can be used in all systems where there is danger of the potable water supply system being contaminated. It prevents an accidental reduction in the pressure in the distribution system from causing backflow from contaminated water in user installations.

VACUUM RELIEF VALVE

NEW

304 Vacu-Stop™ (VRV)

Vacuum relief valves (VRV) automatically allow air to enter into the piping system to prevent vacuum conditions that could siphon the water from the system and damage water heater/tank equipment. VRVs are suitable for water and low pressure steam service and are ideal for use in water heaters and supply tanks, table top heaters, jacketed steam kettles, unit heaters, low pressure steam systems, and steam coil heaters.
DZR low-lead brass body.
Max working pressure 200 psi.
Operating temperature range 32F°—250°F.

PLUMBVENT™ LOW LEAD AIR VENT

PLUMBVENT™ is the market's **only** low lead air vent designed to automatically remove air from domestic water at high points in plumbing systems. As water within the system warms, air naturally comes out of solution. It can accumulate into air pockets, risking efficient pump performance. PLUMBVENT ensures reliable recirculation flow. **Approvals include compliance with U.S. and Canadian plumbing codes. CALEFFI GUARANTEED.**

TANKLESS WATER HEATER SERVICE VALVE KIT

2nd QTR

290 Tankless Water Heater Service Valve Kit

Tankless water heater service valves have union connections that attach directly to 3/4" water heater MNPT nipples. Isolation valves and 3/4" garden hose connections allow for flushing and servicing the water heater.

A pressure relief valve, set to 150 psi, is included with each kit.

DZR low lead brass body.

Max working pressure 400 psi (27 bar).

Operating temperature range 32°–210°F (0°–100°C).

Code	Description	Lbs	USD

AUTOMATIC AIR VENT FOR PLUMBING

**NA5026
PLUMBVENT™**

Automatic air vent with low lead brass body.
Compatible with plumbing systems.
Hygroscopic cap (anti-drip).
Max. working pressure: 150 psi.
Max. discharge pressure: 90 psi.
Max. discharge rate: 1.75 SCFM.
Max working temperature: 240°F.
Approval: NSF/ANSI/CAN 372 low lead.

Function

Float type automatic air vent designed to vent air from water at high points in plumbing system piping. Example applications include risers, domestic hot water storage tanks and recirculation system pump inlets. The automatic air vent is installed in the vertical position in parts of the system where air can accumulate and cause circulator air-lock or reduced efficiency. It is supplied complete with a safety hygroscopic cap that automatically closes the air discharge in case of contact with water.

AUTOFILL™ SET IT AND FORGET IT

The highly regarded and widely used **AutoFill™** is known among contractors as the **Set It and Forget It** hydronic system pressure control valve solution. The **fast-fill function** simplifies system fill by automatically opening fully until fill pressure is reached. System pressure is automatically maintained with set point dial or integral shutoff valve that can be closed for system isolation. The **AutoFill Combo** is conveniently available with an **ASSE 1012** dual check type or **ASSE 1013** RPZ backflow preventer. **CALEFFI GUARANTEED.**

WATER TREATMENT FILLING UNITS

NA573

Replenishment water treatment filling unit, demineralizes site water through a color changing (indicates when to change) demineralizing cartridge.
 Max. inlet pressure: 125.
 Max. working temperature: 100°F.
 Max. flow: 1 gpm.
 TDS of water after treatment: < 30 ppm.

Code	Description	Lbs	USD
NA573022*	½" FNPT	7.4	417.00
NA573100**	Replacement filter housing assembly	3.4	190.00
NA573102	Replacement color-changing filter	1.0	96.80

*Complete including back flow preventer, isolation valves, filter housing with resin cartridge and AutoFill™.
 **Filter housing only. Includes color changing demineralizing cartridge.

Function

The replenishment water treatment filling unit is an assembly consisting of a backflow preventer, isolation valves, filter housing unit with replaceable resin cartridge and AutoFill™ pre-adjustable fill valve. This unit is installed on the water inlet piping in sealed hydronic heating or cooling systems. Three important functions are provided in this single filling unit assembly: maintaining the pressure of the system stable at a set value and automatically filling up with water as required; protecting drinking water systems from return flow, caused by back-siphoning or back pressure of contaminated fluids; and producing from site-sourced water, demineralized water of an ideal grade for use in closed hydronic heating and cooling systems. Minerals causing hardness are almost entirely eliminated. This prevents premature equipment malfunction including reduced efficiency or component failure due to lime scale formation – a common affliction of heat exchangers. Demineralized water is low in electrical conductivity to minimize corrosion due to galvanic attack. Demineralized water eliminates the variability of mineral content found in untreated site water which provides more reliable dosing when chemical additives are used – such as glycol.

Construction detail

Installation

The replacement water treatment filling unit must be horizontally installed following the direction of flow as indicated by the arrow on the AutoFill™ or 573 backflow preventer body. The replacement water treatment filling unit is factory pre-assembled. Fittings may have loosened during shipping and handle. Check the fittings and tighten accordingly.

Cartridge change

1. Close the isolation ball valves. 2. Turn the cartridge with white plastic wrench included with unit. 3. Remove the used cartridge and discard them. 4. Insert the new cartridge. 5. Turn the cartridge and tighten in place with the white plastic wrench. 6. Re-open the isolation ball valves to return to normal operation.

BOILER PROTECTION ACCESSORIES

F296

Replacement thermostatic sensor cartridges.
Sensor cartridge accuracy: $\pm 4^{\circ}\text{F}$.
By-pass from boiler complete closing temperature: $\text{Tset} + 18^{\circ}\text{F}$ ($130^{\circ} + 18^{\circ} = 148^{\circ}\text{F}$).

Fits 280 and 281 Series boiler protection valves.
Easy replacement to change the 280 valve set temperature without removing the valve body from the piping.

F29636	160°F Tset	0.2	32.20

Selection note: thermostatic sensor cartridge will completely close at Tset value +18°F. Example: ($130^{\circ}\text{F Tset} + 18^{\circ}\text{F} = 148^{\circ}\text{F}$ completely closed) $\pm 4^{\circ}\text{F}$.

BOILER PROTECTION HIGH-FLOW THERMOSTATIC MIXING VALVES

280 ThermoProtec™

Boiler protection high-flow thermostatic mixing valve.
Changeable thermostatic sensor cartridge. Brass body and lower plug.
Max. working pressure: 150 psi.
Working temperature range: $40^{\circ} - 212^{\circ}\text{F}$.
Thermostatic sensor cartridge:
130°F & 140°F Tset standard selections, see below.
115°F, 160°F Tset optional (field replaceable).
Sensor cartridge accuracy: $\pm 4^{\circ}\text{F}$.
By-pass from boiler complete closing temperature: $\text{Tset} + 18^{\circ}\text{F}$ (ex. $130^{\circ} + 18^{\circ} = 148^{\circ}\text{F}$).

SOLAR LOW LEAD MIXING VALVES

2521

Adjustable thermostatic three-way mixing valve for solar systems with built-in inlet check valves.
 Setting range: 80°—150°F.
 Max. working pressure: 200 psi.
 Max. inlet temperature: 210°F.
 Connection: ½", ¾", 1" sweat.
 Certified to ASSE 1017, CSA B125.3, UPC, IPC, Low Lead Laws and listed by ICC-ES for use in accordance with the U.S. and Canadian plumbing codes.

Operating principle

The controlling element of the solar thermostatic mixing valve is a temperature sensor that is fully immersed in the mixed water outlet passage. As it expands or contracts, the sensor continuously establishes the correct proportion of hot and cold water entering the valve. The flow is regulated by a piston sliding in a cylinder between the hot and cold water passages. Even when there are pressure drops due to the drawing off of hot or cold water for other uses or variations in the incoming temperature, the mixer automatically regulates the water flow to obtain the required temperature.

AIR SEPARATOR AND SAFETY RELIEF VALVES

251 DISCAL®

Automatic air vent for solar systems.
Working temperature range: -20°—360°F.
Max. working pressure: 150 psi.
Max. discharge pressure: 75 psi.

251 DISCALAIR®

High-performance automatic air vent for solar heating systems.

Max. working pressure: 150 psi.
Max. discharge pressure: 150 psi.

Code	Description	Lbs	USD
250041A	½" MNPT	0.3	66.50

Function

Automatic air vents are used in the closed circuits of solar heating systems. They allow air contained in the fluid to be released automatically during the filling process, through a valve operated by a float in contact with fluid in the system.

The shut-off valves are used in combination with the automatic air vents to isolate them after filling the circuit of solar heating systems. This product has been specially made to work at high temperatures with a glycol medium.

Code	Description	Lbs	USD
251004A	½" FNPT and ¾" MNPT	0.8	142.00

Function

DISCALAIR® solar devices are used in hydronic systems or in the filling and start-up phase of solar heating systems to discharge evenly discharge large quantities of air that have formed in the circuits. This function is performed even when there is considerable pressure due to the special geometry of the discharge mechanism, which is identical to the mechanism on DISCAL® Solar 251 Series air separators.

This product has been specifically designed to work at high temperature with a glycol medium, which is typical of solar heating systems.

NA292

Shut-off fits automatic air vent.
Working temperature range: -20°—360°F.

Standard installation

7504 CONTECA™ Energy meter

CONTECA™ is a direct heat meter designed to measure instantaneous and recorded history of thermal energy usage in residential and commercial buildings.

Micro processor:

Power supply: 24 VAC, 50/60 Hz, 1W.

Data transmission: 2-wire RS-485; selectable Modbus or M-bus (for use with Datalogger).

Ambient temperature: 40°—113°F (4°—45°C).

Environmental rating: NEMA 3S (IP 54).

Pulse inputs: Class 1B per EN 1434-2.

Temperature sensors:

Cable length: 26¼ feet (8 m).

Sensor type: 100 kohm NTC matched.

Temperature sensitivity: < 0.1°F.

Flow meters:

Body material: Brass.

Body threads: ISO 228 male straight.

Piping connections: Dual unions, tailpieces NPT, sweat, flanged, press.

Max. working pressure: 150 psi (10 bar)

Function

The CONTECA meter features an 8-digit liquid crystal display that enables easy reading of BTU consumed as well as a range of technical data indicating equipment operating status and data logging.

Each CONTECA includes an electronic calculator/user interface, two temperature sensors, fittings included. The flow meter comes with the CONTECA meter kit. In addition to the two temperature inputs and flow meter input, four additional pulse inputs, for optional equipment monitoring and data logging. The CONTECA is easy to install and commission, and complies with ASTM E3137 specification for heat metering instrumentation and European directive 2014/32/UE EN 1434 (MI 004). Approved by Measurement Canada for use in heat metering applications in Canada.

The meter has integral RS-485 Modbus protocol 2-wire communication (default) for remote access and configuration when BAS is MODBUS-RT. The RS-485 protocol must be changed to M-bus when using the Datalogger. Up to 250 CONTECA meters can connect to one CONTECA data logger.

Lead seals (included with each kit) to prevent tampering

LIMITED WARRANTY

COVERAGE: Caleffi North America Inc. ("WARRANTOR") warrants that each Caleffi PRODUCT will be free from defects in material and workmanship for a period of two years* from the date of shipment/delivery of the PRODUCT (that can be identified by the "Caleffi" trademark, trade name, or logo affixed to them). The Limited Warranty is referred to herein as "the Limited warranty." The PURCHASER's sole and exclusive remedy under this Limited Warranty for defects in the PRODUCT shall be the repair, replacement or refund of the purchase price, in WARRANTOR's sole discretion, of the defective PRODUCT, or components thereof.

*PRODUCT warranty exceptions:

Switching Zone Relays	3 years
Switching zone relays + valves (Z-one valves and Z-one relays installed together)	5 years

NOT COVERED: This Limited Warranty also does not apply to, and WARRANTOR shall have no liability or responsibility in respect of, damages or expenses relating to:

- The failure to properly store, transport, install or use the PRODUCT as, for example, specified in any manuals or other literature supplied by WARRANTOR, on WARRANTOR's website, or in accordance with any applicable laws, codes, regulators or standards;
- Any PRODUCT purchased from any entity other than WARRANTOR;
- Alteration, change or modification of the PRODUCT, including its subcomponents, parts or assemblies;
- WARRANTOR also makes no warranty that a PRODUCT manufactured does not infringe the intellectual property or other proprietary rights of any third party;
- Accidents, misuse, abuse, abnormal use, improper use, negligent use, wilful misconduct, or use exceeding the recommended and permitted limits of the PRODUCT, and/or normal wear or deterioration;
- Any defect or non-conformity that has not been timely and promptly communicated in writing to WARRANTOR as set forth herein.
- Any damage, cost or expense caused by Act of God; or
- Loss of time, loss of use, inconvenience, loss of profits, lost business, lost business opportunities, damage to reputation, goodwill and any incidental or consequential damages arising out of or relating to the PRODUCT, or other matters not specifically covered hereunder.

PROCEDURE: Upon delivery, PURCHASER shall, within one (3) business day, inspect the PRODUCT for conformity and visible defects. PURCHASER shall give WARRANTOR immediate written, specific and detailed notice of any non-conformities or defects regarding the PRODUCT. Upon receipt of the written notice of claim, WARRANTOR shall have the right to inspect the PRODUCT. In the event of a defect covered by this Limited Warranty, WARRANTOR will, at WARRANTOR's discretion, repair or replace the PRODUCT or any component of the PRODUCT or refund the purchase price for that particular PRODUCT. In the event that PURCHASER submits a warranty claim that, in the sole reasonable discretion of the WARRANTOR, is unfounded, the PURCHASER shall reimburse the WARRANTOR all reasonable costs incurred by the WARRANTOR in evaluating the warranty claim (i.e. travel, lodging, expert evaluations, etc.). WARRANTOR must approve, in advance and in writing, all repairs or replacements covered under or performed pursuant to this Limited Warranty. Any warranty repairs or service must be performed exclusively by WARRANTOR or other authorized representative of WARRANTOR or by another servicing facility pre-approved in writing by WARRANTOR. Acceptance of any Limited Warranty claim is not an admission that any PRODUCT or any of its component parts are defective. The PURCHASER forfeits any rights it may have under this Limited Warranty if the PURCHASER does not follow the procedure described herein.

All requests and notices under this Limited Warranty shall be directed to:

LIMITATION OF DAMAGES: Except as expressly provided by this Limited Warranty, **WARRANTOR SHALL NOT BE RESPONSIBLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES ASSOCIATED WITH THE USE OR NON-USE OF THE PRODUCT OR A CLAIM UNDER THIS LIMITED WARRANTY, WHETHER THE CLAIM IS BASED ON CONTRACT, TORT OR OTHERWISE.** The foregoing statements of warranty are exclusive and in lieu of all other remedies or damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so only in this case this limitation or exclusion may not apply to you. This Limited Warranty shall be the sole and exclusive remedy available to the PURCHASER with respect to this PRODUCT. In the event of any alleged breach of any warranty or any legal action brought by the PURCHASER, based on breach of warranty, alleged negligence or other tortious conduct by WARRANTOR, the PURCHASER's sole and exclusive remedy will be the repair or replacement of any defective PRODUCT as stated herein. In no event shall the liability of the WARRANTOR exceed the purchase price of the PRODUCT.

DISCLAIMER: ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND ALL IMPLIED WARRANTIES ARISING FROM A COURSE OF DEALING, USAGE OF TRADE, BY STATUTE OR OTHERWISE, IS HEREBY STRICTLY LIMITED TO THE TERM OF THIS WRITTEN WARRANTY. This Limited Warranty shall be the sole and exclusive remedy available to the PURCHASER with respect to this PRODUCT. In the event of any alleged breach of any warranty or any legal action brought by the PURCHASER based on alleged negligence or other tortious conduct by WARRANTOR, the PURCHASER'S sole and exclusive remedy will be repair or replacement of defective materials or refund of the purchase price, as stated herein.

TRANSFER OF LIMITED WARRANTY: This warranty is made by WARRANTOR with only first PURCHASER of the PRODUCT and does not extend to any subsequent PURCHASER or any third parties. The unexpired portion of this Limited Warranty may not be transferred to any entity.

APPLICABLE LAW: The parties expressly acknowledge and irrevocably agree that any and all claims or disputes arising out of or otherwise relating to this Limited Warranty shall be decided by a binding arbitration administered by the American Arbitration Association pursuant to Commercial Industry Rules in effect as of the date of this Limited Warranty, to the exclusion of any courts of any place, except as necessary for the enforcement of arbitration rights. The place for any such arbitration shall be The State of Wisconsin. PURCHASER expressly waives any provision of law in the jurisdiction in which PURCHASER is located or any other potentially applicable law which conflicts with any provision of this Limited Warranty at any time.

OTHER RIGHTS: Your acceptance of delivery of The PRODUCT constitutes your acceptance of the terms of this Limited Warranty. This Limited Warranty gives you specific legal rights, and you may also have other rights which vary from state to state. If any term or provision of this Limited Warranty is invalid or unenforceable under any local, state, or federal law, statute, judicial decision, regulation, ordinance, executive order or other rule of law, such term shall be deemed reformed or deleted, but only to the extent necessary to comply with such statute, regulation, ordinance, order or rule and the remaining provisions of this Limited Warranty shall remain in full force and effect.

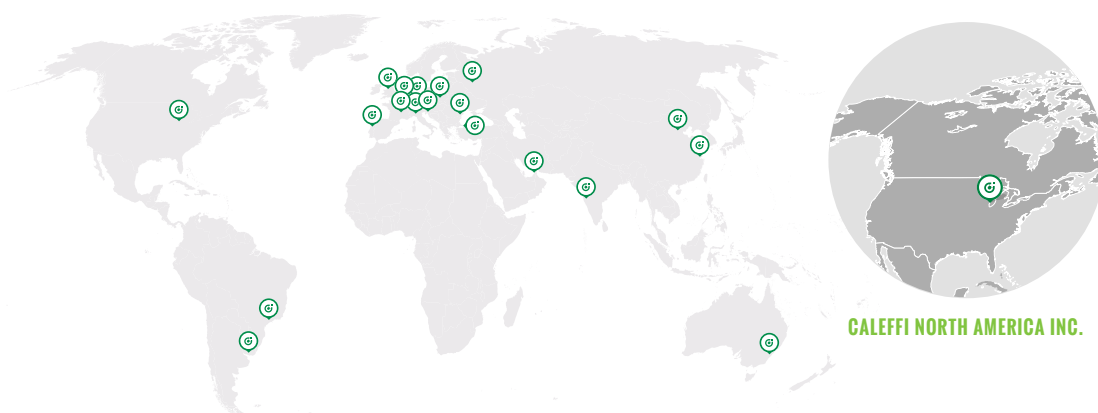

ENTIRE AGREEMENT: This document alone contains the entire Limited Warranty given by WARRANTOR in respect of the PRODUCT. Nothing in WARRANTOR's product literature, marketing materials, advertisements and technical specifications expand or enlarge the scope of this Limited Warranty. There are no terms, promises, conditions or warranties regarding the PRODUCT other than those expressly contained herein. WARRANTOR specifically does not authorize any person, including but not limited to any dealer or other agent or employee of WARRANTOR, to extend the time, scope, terms or conditions of this Limited Warranty or to create or assume for WARRANTOR any other obligation or liability with respect to the PRODUCT or other products designed, manufactured or sold by WARRANTOR. All terms of this Limited Warranty are contractual and not mere recitals, and constitute material terms of this Limited Warranty. It is agreed and acknowledged that the provisions of this Limited Warranty allocate the risks between WARRANTOR and PURCHASER, that WARRANTOR's pricing reflects this allocation of risk, and but for this allocation and limitation of liability, WARRANTOR would not have entered into this Limited Warranty. The agents, employees, and dealers of Caleffi Products are not authorized to make modifications to this limited warranty or make additional warranties binding on Caleffi.

THIS DOCUMENT AND ALL PROVISIONS CONTAINED HAS BEEN SPECIFICALLY AGREED BETWEEN THE PARTIES.
