Tools Needed

General Installation

Level

Silicone Caulking

Pencil

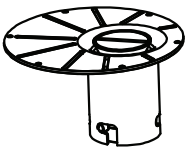

Tape Measure

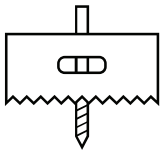

ABS Glue

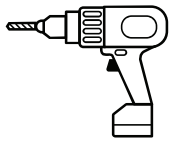

Other Recommended Tools

Roughin EZ
(Product #01086)

4" Hole Saw

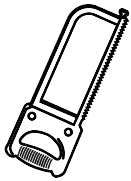

Drill

1-1/2" ABS
(Not Included)

Lubricant
(Included w/
product #01086)

Saw

Channel Locks

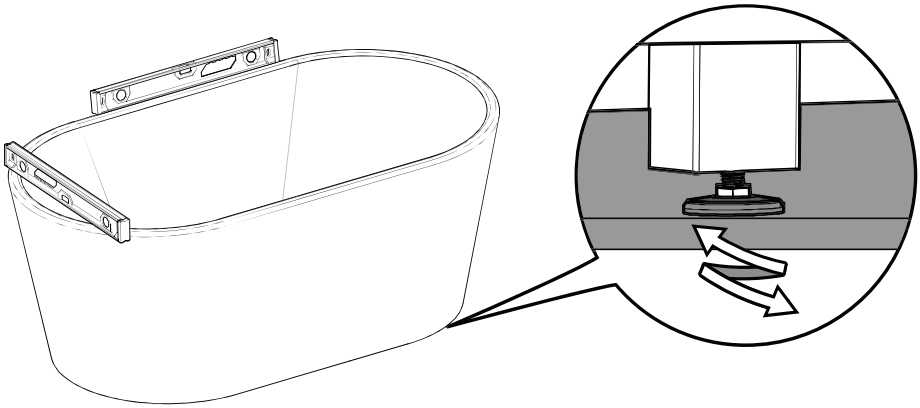

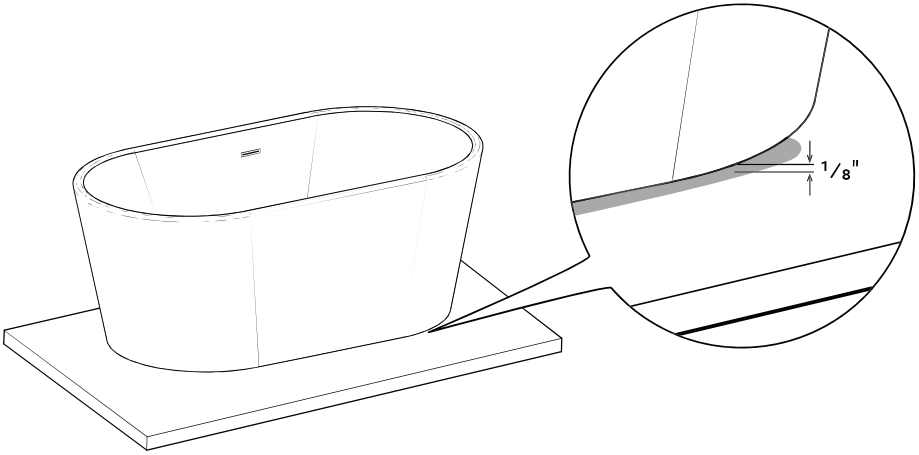

Screws

Step 1

Adjust the levelling legs

Remove the bathtub from its packaging. Turn the bathtub over and adjust the levelling legs so that the bathtub is level and the skirt sits **1/8” (3mm)** above the gound. The skirt **should not** rest on the floor.

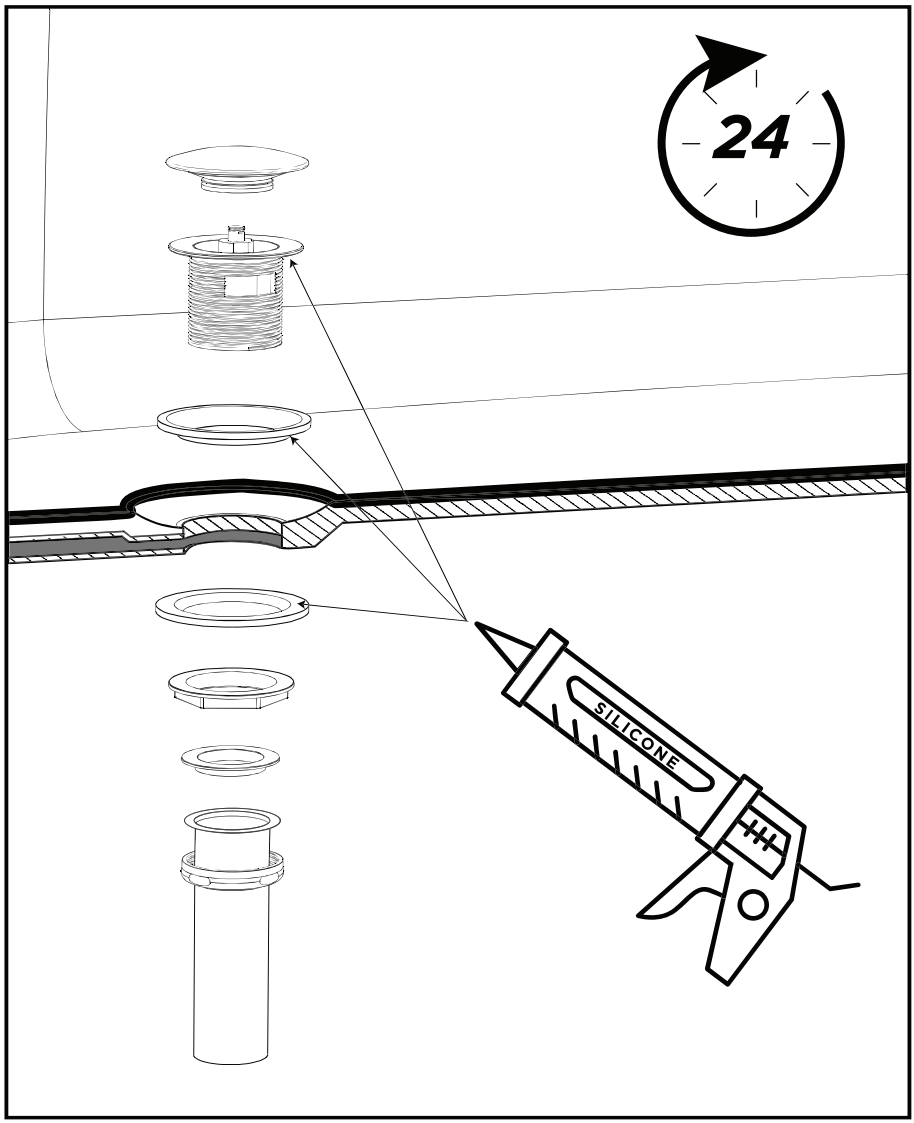

Step 2

Install the drain assembly

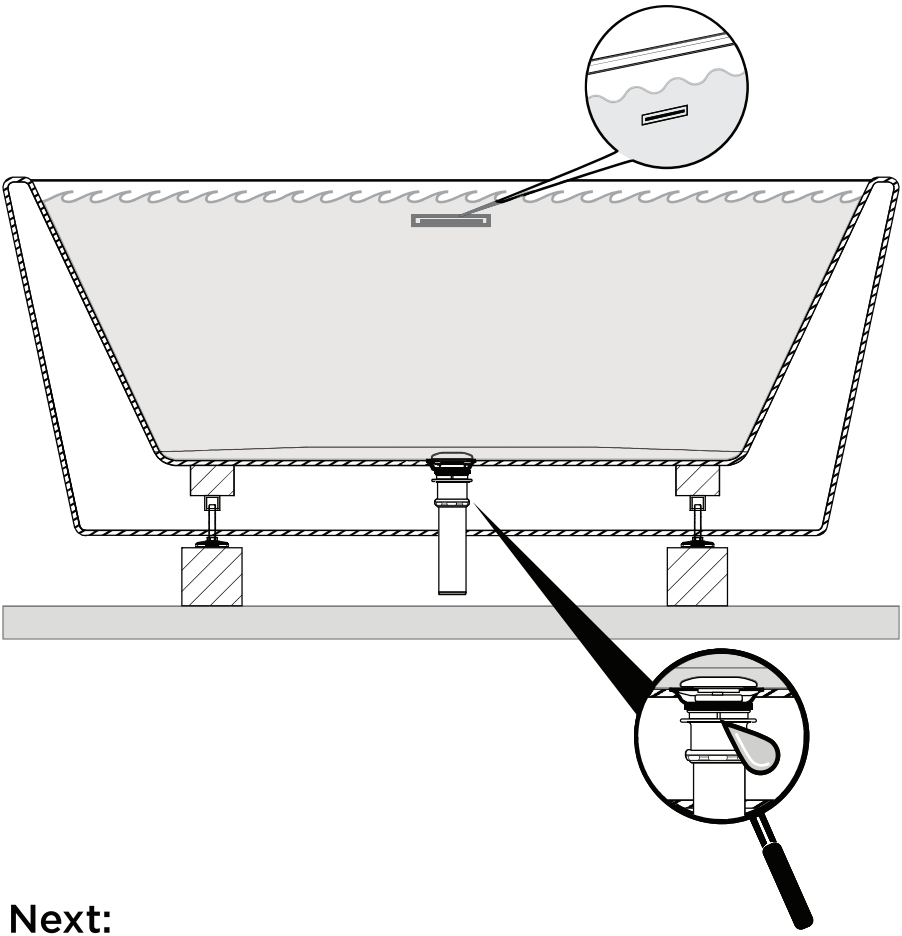

Install the bathtub drain. Ensure to apply silicone to the top rim of the drain as well as the lower gaskets. Silione is required on both the top and bottom to create a watertight seal.

Step 3

Water test the drain and overflow

Elevate the bath by blocking under the legs and water test the drain and overflow. Check for water leaks and ensure proper drainage.

Next:

Using the RoughIN-EZ from Acritec?

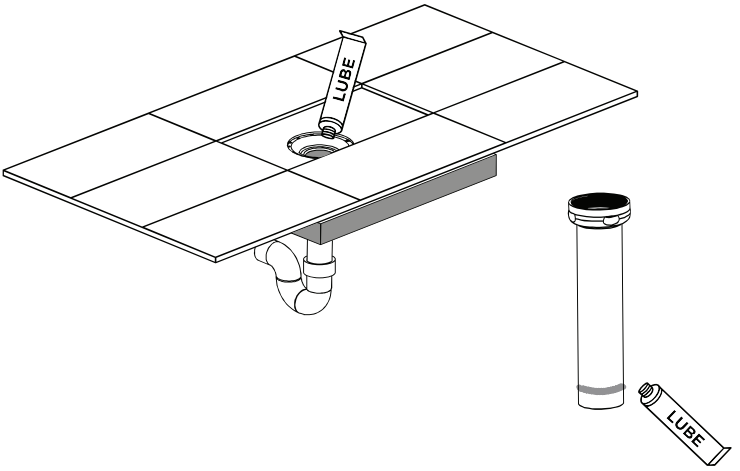

Please refer to the Roughin-EZ installation instructions and then proceed to step #4.

Directly connecting the P-Trap to the drain assembly?

Connect your plumbing and proceed to step #6.

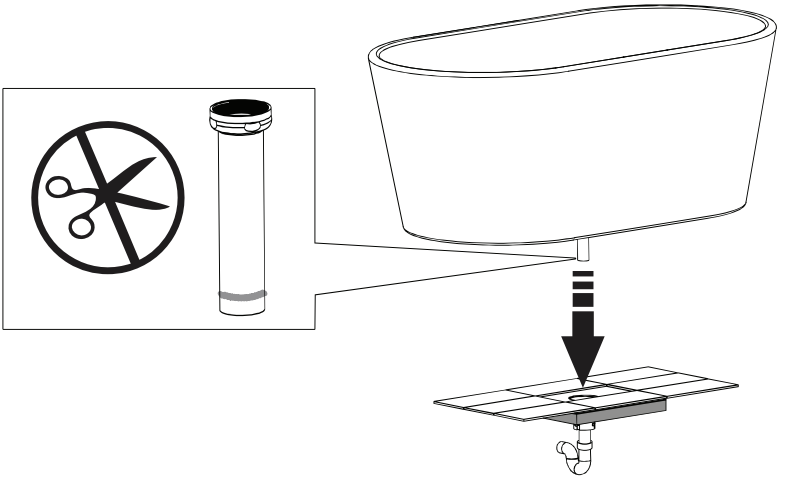

Step 4

Lubricate the tail piece and EZ Drain assembly

Step 5

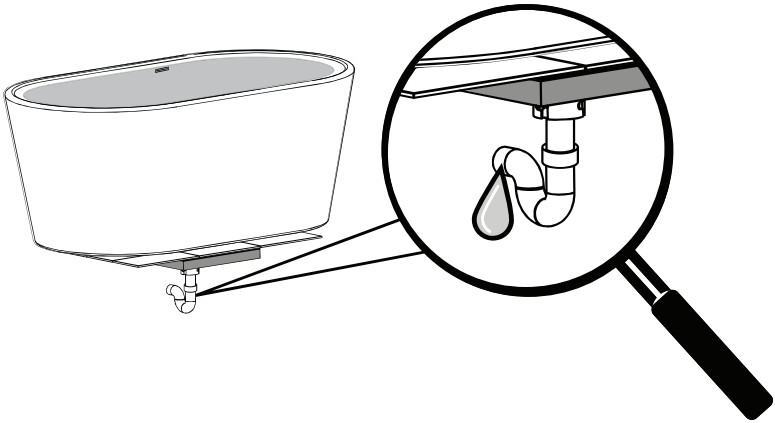

Place the bath onto the EZ Drain assembly

Step 6

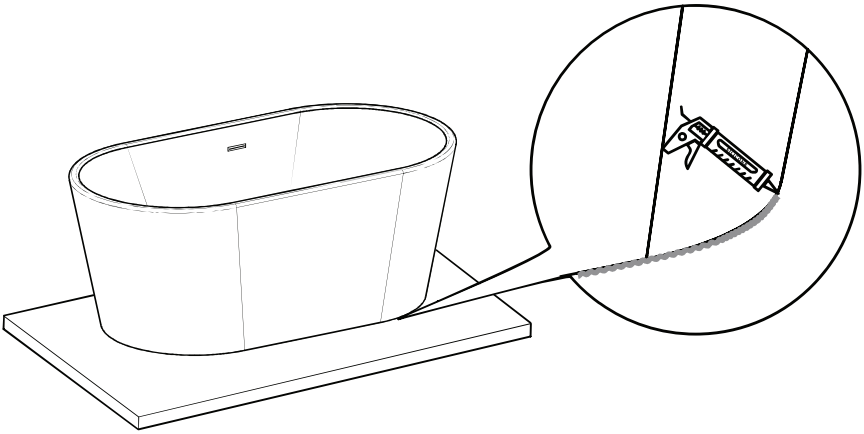

Water Test: Check all plumbing connections for leaks

Ensure the drain pipe is properly connected, and verify the bath is level. Adjust the levelling legs as required. Fill the bathtub and do a drainage test to ensure the bath drains properly. Check for and correct any water leaks.

Step 7

Seal around the base of the tub with silicone sealant

ROUTINE CARE & CLEANING

Your bathtub is made from cast acrylic or gel-coat and will maintain its superior finish and beauty for many years with minimal care.

The instructions below are designed to assist you in keeping your tub looking “new”.

Follow these simple steps:

For normal care and cleaning use a soft cloth or sponge with soap and water. Rinse well and dry with soft clean cloth.

Never use abrasive cleaners.

Clean grease, oil, paint and ink stains with a dab of isopropyl (rubbing) alcohol. Rinse well with water and dry with a soft clean cloth.

Do not allow your acrylic surface to come into contact with nail polish, nail polish remover, Wintergreen oil, dry cleaning solution, lacquer thinners, gasoline, pine oil, all essential oils, etc.

Avoid placing razor blades or other sharp instruments on the bathtub surface as they may scratch it.

To remove joint / drywall compound, use a plastic or wood spatula covered with a damp cloth.

If a rubber bathmat is used during showering/ bathing, it must be removed immediately after each use. Leaving the bathmat in the bathtub after use will damage the acrylic surface.

Periodic cleaning using a specially formulated acrylic cleanser such as Gel-Gloss is recommended to thoroughly clean the surface and apply a protective coating. This will help maintain the high luster of the acrylic finish.

SCRATCHED / DAMAGED SURFACES

Small scratches can be removed by buffing lightly with a clean cloth and using either an automotive polishing liquid or toothpaste containing a fine polishing ingredient.

For deeper scratches, sand the surface lightly with 600 grit “wet or dry” paper and a generous amount of water. Once the scratch has been sanded away, progress through 800 and then 1200 grit “wet or dry” sand paper while continually refreshing the water.
Finish all repairs by buffing the area back to a glossy finish by using a clean cloth and automotive polishing compound or Acri-tec’s specially formulated acrylic polishing compound.

MAJOR REPAIRS

For more extensive damage, such as deep chips, scratches or cracks, please contact Acri-tec directly with a photo of the damaged area.

Our customer service team will help you determine the most appropriate method to repair the area.
