### The Science

The Endocannabinoid System, or ECS, is a complex network of receptors that are found throughout your body, including your central nervous system, peripheral nervous system, and immune system. The goal of the ECS is to maintain a stable internal environment despite fluctuations in the external environment. It is believed to be the system that keeps the body in balance. Your ECS is fueled by endocannabinoids, molecules produced by your body that interact with these receptors.

When the production of endocannabinoids becomes slowed or imbalanced, phytocannabinoids, which are cannabinoids produced in the hemp plant, can supplement what the body may be lacking.

CBD, CBDV, and THCV are just a few of the hundreds of naturally-occurring phytocannabinoids found in the hemp plant. They are all non-psychoactive and work synergistically, playing a critical role in the Entourage Effect.†

### Choose the Best

As we know, oil and water don't mix. It's a widely known fact that oil-based products are poorly absorbed by the body. Our proprietary UltraCell™ technology has been developed by our team of experts to eliminate this issue. UltraCell™ technology has been demonstrated in a clinical study to enhance the bioavailability of our products.†

**Our hemp line of products includes UltraCell™, UltraCell™ Powder, UltraCell™ Topical, UltraCell™ Pet, UltraCBG™, UltraBliss™, UltraR&R™, and UltraReVV™!**
